Highlights

May 2010

Following large gains in April, employment rose by 25,000 in May, the fifth consecutive monthly increase. The unemployment rate was unchanged at 8.1%. Since the start of the upward trend in July 2009, employment is up 1.8% or 310,000.

Chart 1 Employment and unemployment rates, Canada, seasonally adjusted

Analysis — May 2010

Following large gains in April, employment rose by 25,000 in May, the fifth consecutive monthly increase. The unemployment rate was unchanged at 8.1%. Since the start of the upward trend in July 2009, employment is up 1.8% or 310,000.

Full-time employment increased by 67,000 in May, partly offset by losses of 43,000 in part-time. Since July 2009, virtually all employment gains have been in full time.

The number of private sector employees increased by 43,000 in May, while there were 28,000 fewer self-employed workers. Since July 2009, the number of employees in the private sector has risen by 2.8%, with most of the gains in recent months. Since July 2009, the public sector has increased by 2.2%, while self-employment has fallen by 2.3%.

Industries with notable employment increases in May were transportation and warehousing; health care and social assistance; public administration; and agriculture. Declines were observed in information, culture and recreation; accommodation and food services; and natural resources. Employment was little changed in manufacturing and construction in May.

In May, employment was up in Ontario, Alberta, Newfoundland and Labrador as well as Nova Scotia. At the same time, employment declined in British Columbia and Prince Edward Island. There was little employment change in the other provinces in May.

May's overall employment growth was mainly among women aged 55 and over.

Average hourly wages rose by 2.4% in May compared with the same month last year, an increase similar to those observed in recent months.

Gains mostly in service industries

In May, employment gains were found in a number of industries.

Employment in transportation and warehousing increased by 26,000 in May, offsetting the declines of the past two months.

Health care and social assistance continued its long-term upward trend in May, with an increase of 18,000. There were also more people working in public administration (+13,000) and agriculture (+9,000) in May.

These gains were partly offset by employment declines in information, culture and recreation (-25,000); accommodation and food services (-22,000); and natural resources (-11,000).

There was little change in construction and manufacturing in May. Since July 2009, there has been solid employment growth in construction (+83,000 or 7.3%), while employment in manufacturing has been stable.

Notable employment gains in four provinces

Ontario's employment was up 18,000 in May, all in full-time work. This month's increase brings employment gains in that province to 127,000 (+1.9%) since July 2009, a rate of growth similar to the national average (+1.8%). In May, the unemployment rate inched up 0.1 percentage points to 8.9% as more people entered the labour market.

Employment in Alberta increased for the second straight month, up 15,000 in May, lowering the unemployment rate by 0.8 percentage points to 6.6%. With these recent gains, employment in the province is up slightly compared to July 2009 (+0.5%).

Strong employment gains in Newfoundland and Labrador in May (+7,600) pushed the unemployment rate down 1.2 percentage points to 13.8%. Recent employment increases bring total growth since July 2009 to 6.7%, the fastest of all provinces.

There were more people working in Nova Scotia in May, as employment increased by 3,500, bringing growth since July 2009 to 1.5%. The unemployment rate was 8.7% in May.

In May, employment was little changed in Quebec and the unemployment rate was 8.0%. Since July 2009, employment growth in Quebec has been among the fastest of all provinces at 2.3%.

Employment edged down in May in both British Columbia (-10,000) and Prince Edward Island (-1,900). Compared to July 2009, employment is up 2.0% in both provinces.

Employment up for women aged 55 and over

May's employment increase was mainly among women aged 55 and over (+17,000). Since July 2009, employment has grown the fastest among men aged 55 and over (+5.0%), followed by women aged 55 and over (+3.1%).

Among core-aged workers (25 to 54), since July 2009, employment has risen by 1.7% for women and 1.0% for men. Over the same period, youth employment has grown by 1.6%.

Good start for student summer employment

From May to August, the Labour Force Survey collects labour market information about young people aged 15 to 24 who were attending school full-time in March and who intend to return to school in the fall. The May survey results provide the first indicators of the summer job market, especially for students aged 20 to 24, as students aged 15 to 19 are not yet out of school for the summer. The data for June, July and August will provide further insight into the summer job market. The published estimates are not seasonally adjusted, and therefore comparisons can only be made from one year to another.

There were 54,000 more students aged 20 to 24 employed in May 2010, bringing their employment rate up 3.1 percentage points to 59.2% compared with May 2009. In May 2009, students were especially impacted by the labour market downturn.

Despite the increase compared to 2009, the student employment rate remains below that of May 2008 (63.6%), a year when student employment was particularly strong.

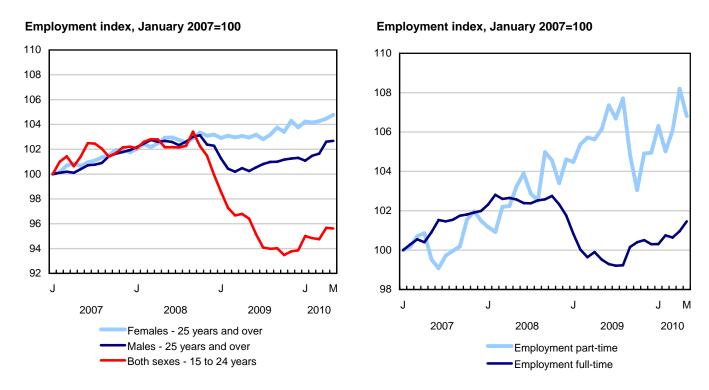

Note to readers

The Labour Force Survey (LFS) estimates are based on a sample, and are therefore subject to sampling variability. Estimates for smaller geographic areas or industries will have more variability. For an explanation of sampling variability of estimates, and how to use standard errors to assess this variability, consult the "Data quality" section of the publication Labour Force Information (71-001-X, free).

Unless otherwise stated, this release presents seasonally adjusted data, which eases comparisons by removing the effects of seasonal variations.

The 2009 Labour Force Historical Review on DVD-ROM (71F0004XVB, \$209) is now available.

- · Labour force characteristics by age and sex
- Distribution of employed people, by industry, by province
- Labour force characteristics, population 15 years and older, by census metropolitan area
- Labour force characteristics, population 15 years and older, by economic region, by province
- Days lost per worker by cause, by provinces
- Days lost per worker by industry and sex
- People employed, by educational attainment
- Reasons for part-time work by sex and age group
- Self-employment, historical summary
- Employment by age, sex, type of work, class of worker and province (monthly)
- Employment by major industry groups, seasonally adjusted, by province (monthly)
- Actual hours worked per week by industry, seasonally adjusted (monthly)
- Average hourly wages of employees by selected characteristics and profession, unadjusted data, by province (monthly)
- Labour force characteristics, seasonally adjusted, by province (monthly)
- Labour force characteristics, unadjusted, by province (monthly)
- Labour force characteristics, seasonally adjusted, by census metropolitan area (3 month moving average)
- Labour force characteristics, unadjusted, by census metropolitan area (3 month moving average)
- Labour force characteristics, unadjusted, by economic region (3 month moving average)

Since 1992, the Labour force survey (LFS) has been conducted in the Yukon, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are not included in the national totals. In 1995, the LFS in the Yukon underwent a sample redesign. One result of the redesign was that the covered population increased from 85% to 92%, which is reflected by the sharp increase in the three month moving averages estimates of January, February and March of 1995 for all the level estimates. Users are therefore warned to be cautious when comparing estimates before January 1995 to estimates for January 1995 and forward.

Note(s): Related CANSIM table 282-0100.

Since 2001, the Labour force survey (LFS) has been administered in the Northwest Territories, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are not included in national totals.

Since 2004, the Labour force survey (LFS) has been administered in Nunavut, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are 3-month moving averages and are not included in national totals. From January 2004 to December 2007, estimates represent about 70% of all Nunavut residents aged 15 and over. Starting in January 2008, coverage was extended to 92%, so that by March 2008, the 3-month moving average is completely based on the extended coverage. Because of the large difference in coverage, users are recommended not to compare estimates prior to January 2008 with data afterwards. The January and February 2008 3-month moving average estimates are based on a mix of both coverages, since the extended coverage was introduced in January 2008. Estimates from January 2004 to December 2007 are based on the 10 largest communities in Nunavut: Iqaluit, Rankin Inlet, Cambridge Bay, Kugluktuk, Baker Lake, Arviat, Pond Inlet, Cape Dorset, Pangnirtung, Igloolik. Estimates from March 2008 to present cover the above communities as well as: Taloyoak, Gjoa Haven, Kugaaruk, Coral Harbour, Repulse Bay, Qikiqtarjuaq, Arctic Bay, Hall Beach, Clyde River.

Average standard error of change over the year (see "Sampling Errors" in Data Quality for further explanations).
 Students are persons aged 15 to 24 who attended school full-time in March and who are planning to return to school in the fall.

^{3.} Other persons are all other youths aged 15 to 24 who are not included in the student population. **Note(s):** Related CANSIM Table 282-0006.

Table 9-2 – continued

Students and other persons aged 15 to 24 (unadjusted) by province

	Population			Labour force				Unemployment	Employment
		Labour force	Employment	Full-time employment	Part-time employment	Unemployment	rate	rate	rate
			in	thousands					
British Columbia May 2009 May 2010	305.9 305.4	251.4 246.4	220.2 210.1	149.4 142.7	70.9 67.3	31.2 36.3	82.2 80.7	12.4 14.7	72.0 68.8

^{1.} Students are persons aged 15 to 24 who attended school full-time in March and who are planning to return to school in the fall.

Other persons are all other youths aged 15 to 24 who are not included in the student population.

Data quality

About the Labour Force Survey

The statistics contained in this report are based on information obtained through a sample survey of 53,000 representative households across the country. The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. It has been carried out monthly since then. The information generated by the survey has expanded considerably over the years with a major redesign of the survey content in 1976 and again in 1997, and provides a rich and detailed picture of the Canadian labour market.

The sample used in the Labour Force Survey has been designed to represent all persons in the population 15 years of age and over residing in the provinces of Canada, with the exception of the following: persons living on Indian reserves, full-time members of the armed forces and people living in institutions (for example, inmates of penal institutions and patients in hospitals or nursing homes who have resided in the institution for more than six months). Monthly estimates of employment, unemployment and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Definitions and explanations

The **labour force** is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed persons are those who, during the reference week:

- (a) did any work at all
- (b) had a job but were not at work

A person is considered to be **full-time** if his/her usual hours at the main job are 30 or more hours per week. When the number of hours worked at the main job is usually less than 30 hours per week then he/she is considered to be **part-time**.

Unemployed persons are those who, during the reference week:

- (a) were without work, had actively looked for work in the past four weeks (ending with reference week), and were available for work;
- (b) had not actively looked for work in the past four weeks but were on temporary layoff and were available for work;
- (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Persons in the civilian non-institutional population 15 years of age and over who, during the reference week, were neither employed nor unemployed are classified as **not in the labour force**.

The **unemployment rate** represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, etc.) is the labour force in that group expressed as a percentage of the population for that group.

The employment rate (formerly the employment/population ratio) represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, etc.) is the number employed in that group expressed as a percentage of the population for that group.

The part-time rate represents the number of persons employed part-time expressed as a percentage of the employed. The part-time rate for a particular group (age, sex, etc.) is the number employed part-time in that group expressed as a percentage of the employed for that group.

All geographic regions are based on the 2001 Census boundaries.

Seasonal adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. The seasonally adjusted series contains irregular as well as longer-term cyclical fluctuations.

The seasonally adjusted series are revised each year to take into account current data and to generate new forecast factors for the next twelve months. The data are therefore subject to slight revisions in future issues of this publication.

Sampling variability of estimates

Estimates in this publication are based on the Labour Force Survey, approximately 53,000 households across Canada. Because the entire population is not surveyed, the estimates are subject to sampling error. While the published estimate is the best available indicator of the real value, changes in the level of any estimates between two months can be the result of a true change or sampling variability. The sampling error can be estimated by calculating the standard error for the published estimate or statistic. These standard errors have been included in the publication tables, in order to assist users in interpreting the data.

Interpretation based on standard error

Two thirds of the time (68%), a change greater than the sampling error indicates a real change. The larger the change compared to the standard error, the better the chance that we are observing a real change, as opposed to a change due to sampling variability. At the 95% level, in order to ensure that change is real, the change in the estimate must be greater than twice the sampling error.

Movements in estimates that are smaller than the sampling error are less likely to reflect a real change and more likely to be due to sampling variability. While the above is true for monthly movements, one can have more confidence in a series of consecutive movements in the same direction, even though some of the monthly movements may be smaller than the sampling error.

Interpretation based on confidence intervals

Confidence intervals provide another way of looking at the variability inherent in estimates of sample surveys. To illustrate how to calculate the confidence interval, let us say that one month the published estimate for total employment rose by 16,000 to reach 16,500,000. The associated standard error for the movement estimate is 27,200. The standard error used to interpret the movement estimate indicates that:

- There are approximately two chances in three (68%) that the real value of the movement between the two months falls within the range -11,200 to +43,200 (16,000 + or one standard error).
- There are approximately nine chances in ten (90%) that the real value of the movement between the two months falls within the range -27,520 to +59,520 (16,000 + or 1.6 times the standard error).
- There are approximately nineteen chances in twenty (95%) that the real value of the movement between the two months falls within the range -38,400 to +70,400 (16,000 + or two standard errors).

For more detailed explanations on sampling variability of estimates, and in particular for information on how to assess the variability of level estimates, consult the Data quality section of the *Guide to the Labour Force Survey*, (71-543-G) on page 27.
