INTRODUCTION

The Data Book is divided into four sections. Section A presents information related to farm income. Section B contains information on farm financial conditions. Section C provides data on government expenditures for the agri-food sector. Section D contains information on producer support estimates. Notes on the methodology are provided at the end of each section. This issue provides the most up-to-date key economic and financial indicators.

EXECUTIVE SUMMARY

FARM INCOME, FINANCIAL CONDITIONS AND GOVERNMENT ASSISTANCE DATA BOOK

The Farm Income, Financial Conditions and Government Assistance data book is a compendium of mainly historical data series from several sources. This information is compiled together to provide a comprehensive view of the situation in primary agriculture and the expenditures that governments are making to ensure a strong and competitive sector. The data book represents a convenient single resource for users of key economic and financial indicators of the primary agriculture sector. The data book also provides valuable information on government assistance to the agriculture and agri-food sector not readily available from other sources.

The information in the data book is prepared in consultation with the provincial ministries responsible for Agriculture. Information is also provided by other members of Agriculture and Agri-Food Canada as well as by other federal departments.

The data book is divided into four sections. Section A presents information related to farm income while Section B contains information on farm financial conditions. Section C provides data on government expenditures for the agri-food sector and Section D provides information on estimates of support to agriculture. Notes on the methodology are provided at the end of each section. Each issue provides the most up-to-date key economic and financial indicators.

HIGHLIGHTS

Section A - Farm Income

- In 2009 total market receipts from both crop and livestock sources reached \$41.3 billion, the second highest level over the 10-year period 2000-2009. The record year for total market receipts, \$41.8 billion, occurred a year earlier, in 2008. Most of the increase in market receipts in 2009 was due to the record crop receipts of \$23.3 billion, as livestock receipts at \$18.0 billion were 4.7 percent lower than the \$18.8 billion received in 2008. Livestock receipts reached \$19.0 billion in 2001, the highest level achieved over the 2000-2009 period.

- Net cash income in 2009 at \$8.7 billion was also the second highest level reported over 2000-2009, surpassed only by the \$8.8 billion achieved in 2008. In comparison, the lowest net cash income level over the reference period was \$5.0 billion in 2003, the year that BSE was discovered in Canadian cattle herds.
- Program payments fell to \$3.3 billion in 2009 from \$4.2 billion a year earlier. Record income years in 2008 and 2009 due to strong market sales reduced the need for programs payments, especially for grain and oilseed producers.
- Preliminary estimates for 2009 show that on average, the largest farms are in Newfoundland and Labrador, which reported average operating revenues of \$675,800 in 2009. The smallest farms are in Saskatchewan, where the average farm reported \$233,885 in total operating revenues that year. Nationally, the average farm reported \$304,679 in operating revenues and \$256,954 in operating expenses in 2009 for an average net operating income of \$47,725.
- Net operating income by farm type shows considerable variation. Potato farms had the highest average net operating income in 2009 at \$214,693, while grains and oilseeds farms were at \$63,776, fruit and tree farms at \$25,519 and cattle farms at \$11,740. Hog farms had an average net operating income of \$36,876, which represented a significant increase (29 percent) from the previous year.
- The average farm family earned \$93,700 from all sources, including farm and off-farm income, in 2007.

Section B - Farm Financial Conditions

- Farmers take on debt to meet short-term financial obligations and to make investments in their farming operations to take advantage of emerging marketing opportunities. At the national level, farm debt increased every year during the 10-year period 2000-2009. In 2009, total farm debt in Canada stood at \$63.0 billion.
- There were only 121 farm bankruptcies in 2009, with Quebec (33 bankruptcies) and Ontario (33 bankruptcies) reporting the highest number.

The number of farm bankruptcies followed a declining trend between 1995 and 2009, with a sharp fall occurring in 2007 and later years.

- Farm Credit Canada approved 41,418 new loans in 2009. The average size of loan approved by Farm Credit Canada has increased steadily to \$159,000 in 2009. Almost 4 out of 5 Canadian Agricultural Loans Act (CALA, formerly Farm Improvement and Marketing Cooperatives Loans Act) loans went to Saskatchewan in 2009.
- Farmers on the whole had healthy balance sheets in 2008. The average Canadian farm reported \$1.6 million in assets and \$0.3 million in debt, for an overall net worth of \$1.3 million. There was considerable variation by farm type, with net worth of poultry farms averaging \$3.8 million, potato farms at \$3.5 million, dairy farms at \$3.4 million, grain farms at \$1.3 million, hog farms at \$1.1 million, and beef farms at \$900,000. Farms in British Columbia had the highest level of farm assets amongst provinces at \$2.5 million, and the highest net worth at \$2.1 million.
- Total expenses for farming declined in 2009, for the first time since 1986, to \$41.3 billion, as agriculture moved out of a period of elevated fuel, fertilizer and feed prices experienced in 2008. Machinery operating costs, primarily fuel, commercial feed costs and interest costs were mainly responsible for this decline from the previous year.
- In the summer of 2010, urea cost an average of \$419 per tonne in Manitoba and an average of \$499 per tonne in Ontario. In the case of Manitoba, urea was priced lower than the \$451 per tonne paid by farmers in the neighbouring states of Minnesota and North Dakota. Ontario farmers paid virtually the same prices as the \$500 paid by neighbouring farmers in Michigan, Indiana and Ohio. Conversely, farmers in Manitoba and Ontario paid higher prices for diesel and gasoline than their US neighbours.

Section C - Government Expenditures in Support of the Agri-Food Sector

- Total government expenditures in support of the agriculture and agri-food sector remained virtually unchanged at \$7.29 billion in 2009-10. During that period, federal expenditures are estimated to have increased by 11 percent to

reach \$4.19 billion while the provincial expenditures are estimated to have decreased by 11 percent to \$3.10 billion.

- Expectations are that federal expenditures will continue to increase in 2010-11, reaching \$4.23 billion, while the provincial expenditures will decrease slightly to \$3.04 billion.
- In 2009-10, federal program payments, which include primarily payments made directly to producers, are expected to rise slightly compared to 2008-09, and reach \$1.42 billion. These payments are expected to continue to increase in 2010-11, reaching \$1.62 billion. During the same period, provincial program payments are expected to decrease significantly, falling from \$2.0 billion in 2008-09 to \$1.53 billion in 2009-10 and \$1.50 billion in 2010-11.
- In 2009-10, program payments and research and inspection represent 58 percent and 56 percent of federal and provincial expenditures, respectively. However, the share of only research and inspection expenditures represents 26 percent at the federal level compared to 11 percent at the provincial level.

Section D - Estimates of Support to Agriculture

- Expressed as a percentage of gross farm receipts, the producer support estimates (PSE) for Canada increased to 20 percent in 2009 from 13 percent in 2008. This is explained by a strong increase in the market price support for milk, due to a decline in world prices for this commodity, and by higher budgetary transfers under the AgriInvest and AgriStability programs.
- In 2009, single commodity transfers represent 71 percent of total PSE, which is high when compared to the EU (30 percent) and the US (25 percent). This result for Canada can be explained by the high level of support to milk through market price support.
- In 2009, the level of support also increased in the EU and the US, but not by as much as in Canada. From 2008 to 2009, the PSE increased from 8 percent to 10 percent in the US and from 22 percent to 24 percent in the EU.

¹ Based on family income from all sources: farm (net operating income) and off-farm income.² Off-farm employment income includes "wages and salaries" and "net non-farm self-employment income".³ Other off-farm income includes "government social transfers and RRSP".⁴ Includes losses.

Methodology for Farm Income

Table A.1: Farm Receipts, Expenses and Income

Net Cash Income measures farm business cash flow (gross revenue minus operating expenses) generated from the production of agricultural goods. It represents the money available for debt repayment, investment or withdrawal by the owner. *Realized Net Income* measures the financial flows, both monetary (cash income) and non-monetary (depreciation and income-in-kind), of farm businesses. It represents the net farm income in a given year regardless of the year the agricultural goods were produced. *Total Net Income* measures the financial flows and stock changes of farm businesses. It values agriculture economic production during the year that the agricultural goods were produced. It represents the return to owner's equity, unpaid labour, management and risks.

Crop and livestock receipts include only receipts from sales of agricultural products through commercial channels and exclude direct sales between farmers within the same province.

Total program payments include gross payments directly paid to producers under federal, provincial and municipal programs. Program payments represent the amount actually received by producers on a calendar year basis, with the exception of the "Other Payments" category which includes some payments on a fiscal or crop year basis. Program payments are allocated to the year during which they are actually received by producers.

NISA payments represent only the producers' withdrawals from Fund 2 (governments' fund). The large balances accumulated in Fund 1 (producers' fund) and unrealized triggers in Fund 2 are not included.

Farm operating expenses include all business costs incurred in the production of agriculture commodities for goods and services bought outside each province's agriculture sector.

Some government support programs are reflected in operating expenses to the extent that they reduce farm input costs, as is the case with provincial credit programs. Also included are producer premiums paid for insurance programs.

Figure A.1(a) and Figure A.1(b): Canadian Farm Income in Current Dollars and in 2002 Dollars

Real income is defined in terms of 2002 dollars using the Gross Domestic Product Implicit Price Deflator (GDP deflator, 2002 = 100).

Table A.2: Gross Direct Program Payments and Producer Premiums

Program payments include gross payments/indemnities directly paid to producers under statutory programs such as AgriStability, as well as provincial income stabilization programs and other special income support programs such as drought assistance.

Production Insurance payments include only government production insurance programs; private hail insurance payments are excluded. The latter are included in Other Payments.

Producers also contribute to government programs by paying premiums for programs such as Production Insurance and provincial stabilization programs.

Table A.3 and Table A.4: Average Total Operating Revenue, Operating Expenses and Net Operating Income per Farm, by Province (A.3) and By Farm Type (A.4)

The Taxation Data Program (TDP) estimates of farm income are derived from a sample of individual tax filers who reported either positive gross farm income or non-zero net farm income from self-employment on their income tax returns. For incorporated farms, the sampling frame is made up of all corporations within the ten provinces and the territories that are classified as farms according to the North American Industry Classification System (NAICS) and that have sales of \$25,000 or more. To be classified as a farm in NAICS, 50% or more of the sales has to come from agricultural activities. For purposes of statistical tabulations, the TDP excludes unincorporated farms with farm revenues below \$10,000.

The TDP farm income estimates differ from the official farm cash receipts and expenses estimates reported in Agriculture Economic Statistics, Catalogue No. 21-011-XIE and 21-012-XIE. For explanation of some of the differences, please refer to "Understanding Measurements of Farm Income", Catalogue No. 21-525, Agriculture and Agri-Food Canada and Statistics Canada.

Operating revenues refers to revenue received from the sale of agricultural commodities, as well as from agricultural program payments and insurance proceeds. Revenue from the sale of forest products is also included.

Operating expenses refer to the business costs, not including depreciation, incurred by farm operators for goods and services used in the production of agricultural commodities.

For both operating revenues and operating expenses, inter-farm sales and purchases are included.

The type of farm is based on a percentage of agricultural sales. The commodity or commodity group that makes up 50% or more of the sales determines the primary farm type that is assigned to an individual farm. The NAICS acts now as the basis for classifying farm types.

For a detailed description of methodology, please refer to the Whole Farm Data Base Reference Manual, Statistics Canada, Catalogue No. 21F0005GPE.

Table A.5: Average Family Income by Source and Income Group, Unincorporated Farms

Total family income is derived from the personal tax records of individual family members. Farm families are identified by linking two source files: the Taxation Data Program's (TDP) sample of individuals operating unincorporated farms and the T1 Family File (T1FF) which contains family units developed by the Small Area and Administrative Data Division (SAADD) of Statistics Canada.

The following members and/or families are excluded:

- 1) Non-family persons who do not belong to a husband-wife or a lone parent family;
- 2) Families in which members derived all of their farm revenues from non-agricultural sources;
- 3) Families in which members are involved in more than one farming operation,
- 4) Families operating a farm showing a gross operating revenue of less than \$10,000.

Off-farm income estimates are produced by adding the off-farm income components of family members and applying the appropriate family weight to each record which corresponds to a family.

For a detailed description of the methodology, please refer to Statistics on income of farm families, Statistics Canada, Catalogue No. 21-207-XIE.

Note: Input expenses are net of government rebates.

*Includes: Stabilization premiums; heating fuel; twine, wire and containers; telephone; irrigation; custom work; and other expenses.

Methodology for Farm Financial Conditions

Table B.1: Farm Assets and Figure B.1: Asset Class as a Percentage of Farm Assets

Farm asset and lender share information is from data published by the Agriculture Division of Statistics Canada in Catalogue No. 21-016-XIE, Agriculture Economic Statistics.

Table B.2: Farm Debt and Figure B.2: Lender Shares as a Percentage of Farm Debt

Farm debt and lender share information is from data published by the Agriculture Division of Statistics Canada in Catalogue No. 21-014-XIE, Agriculture Economic Statistics.

Table B.3: Farm Bankruptcies and Figure B.3: Distribution of Farm Bankruptcies

Bankruptcies are only one form of financial failure and the bankruptcy statistics represent a small part of the total number of farmers who leave agriculture because of financial difficulties.

Bankruptcy data are collected and reported monthly by the Office of the Superintendent of Bankruptcy.

Table B.4: Farm Credit Canada (FCC) Loans Receivable Portfolio and Figure B.4: Distribution of the Amount of FCC Loans Receivable

FCC information on total loans receivable and loans approved is from the FCC 2009-10 Annual Report. Information on the provincial distribution of total loans receivable is from FCC.

Table B.5: New Loans Registered Under the CALA and Figure B.5: Distribution of the Amount of New Loans Registered under the CALA

Data is reported on: 1) new loans registered under CALA; 2) distribution of the amount of new loans registered under CALA, by province. All data were provided by the CALA administration.

Table B.6: Average Assets, Liabilities, Net Worth and Net New Investment, by Farm Type

Per farm information on farm assets, farm debt, net worth, and net new investment is from the Farm Financial Survey. The Farm Financial Survey is conducted by Statistics Canada for Agriculture and Agri-Food Canada every year and collects data from a sample of farms with annual gross revenues over \$10,000.

Net new investment is measured by gross capital investment less capital sales.

Figure B.6: FCC Mortgage Rate and Prime Interest Rate

The prime interest rate in Canada is reported in the Bank of Canada Review (or at www.bank-banque-canada.ca). The FCC five-year fixed mortgage rate (option plus 10) is reported by Farm Credit Canada.

Tables B.7 and B.8: Selected Average Fertilizer and Fuel Prices

The information on fertilizer prices is provided for Manitoba and Ontario along with comparisons to adjacent U.S. states, by private consultants on contract to Agriculture and Agri-Food Canada.

Table B.9: Agricultural Inputs

Input expenses are reported net of government rebates. The rebates reduce some farm input costs. Inter-farm purchases are excluded.

For a detailed description of methodology, please refer to Agriculture Economic Statistics, Statistics Canada, Catalogue No. 21-012-XIE.

Figure C.1: Federal and Provincial Government Expenditures in Support of the Agri-Food Sector, Canada and Provinces, 2003-04 to 2010-11

Figure C.2: Federal and Provincial Government Expenditures by Major Category

Program payments include income support and stabilization, ad hoc and cost reduction, production insurance and financing assistance programs.

Research and inspection include administration (e.g. salaries) and capital expenditures, and grants and contributions.

Operating and capital include general administration and management, policy, information and statistical services.

Storage and freight assistance include program payments for storage and freight.

Development and trade related programs include administration and capital expenditures, and grants and contributions for regional development, marketing and trade and environment.

Others include food aid and international assistance, extension, education, social program payments and tax expenditures.

Methodology for Government Expenditures

Definition of Government Expenditures in Support of the Agri-Food Sector

Government expenditures (GE) estimate how much governments spend on the agri-food sector (primary agriculture, agricultural input industries and food and beverage processing, excluding expenses related to aquaculture and fish processing) in a given fiscal year. They consist of charges paid for purchased goods and rendered services and monies paid directly or indirectly to individuals, agencies or other entities in the agri-food sector as part of a transfer payment or existing program by the federal and provincial governments. They also take into account transfers of funds to Crown Corporations, between departments and to other levels of government. The various sources of information, supplemented by officers working in departments, are federal and provincial public accounts, estimates and/or expenditure plans, Statistics Canada and other internal reports that cover areas of agri-food programs both inside and outside provincial and federal agriculture ministries.

Accrual accounting: Since fiscal year 2001–02, federal and provincial governments have used full accrual accounting, which conforms with generally accepted accounting principles (GAAP), recognized worldwide as a universal set of standards to record and report financial transactions. It is also in accordance with the Canadian Institute of Chartered Accountants (CICA). For GEs, this change affects the capitalization of tangible assets. Capital expenditures therefore reflect the amortization costs of tangible assets over their useful life.

Treatment of program deficits/surpluses: Program deficits, forgiveness of international food aid debts and/or debt reductions are shown as expenditures in the year in which they are recorded in the public accounts. Current program deficits or defaults not yet recognized by a transfer of funds from governments are excluded from the expenditure estimates. In cases where surpluses generated from government funded programs are returned to both levels of government upon the termination of a program, the refunds or recoveries for the program are accounted for in the year they are reported in official documents.

Treatment of Crown Corporations: Only transfers of funds by governments to Crown Corporations are included in the expenditure estimates. Crown Corporation expenditures, revenues and outstanding deficits/losses are excluded.

Expenditures outside Canada: Expenditures for food aid and support of international agricultural organizations are included only in the total federal expenditures and are identified as "outside Canada" expenditures. Therefore, the sum of federal expenditures by province does not add up to the total federal expenditure tables. These expenditures "outside Canada" include the purchase of Canadian agricultural commodities for distribution abroad and funds provided to international agricultural organizations.

Treatment of special program accounts: In the case of programs which are operated by a fund with contributions from governments and producers, only the governments' contribution to administration fees and to the funds are included. Producers' share of participation and payouts made to producers are excluded. Examples are Crop/Production Insurance and the Net Income Stabilization Account (NISA).

Treatment of Loans and Advances: Loans and advances made to producers and organizations are not included as they are eventually recovered. However, interest subsidies and defaults on loans as reported in public accounts are included because they represent a cost to governments. The accrual accounting system also allows provisions for doubtful accounts and valuation allowances that are part of the GE estimates. Similarly, provisions for probable losses on loan guarantees issued by the government are established whenever collectibility is considered doubtful and these valuations are included in the GE estimates.

Government Recoveries: Government recoveries include revenues from user fees for services, from licenses and permits, leases and rentals, sales and royalties, land sales, transfers from one level of government to another, refunds of previous years' expenditures and previous years' recoveries, including government share of program surpluses, and from other miscellaneous forms of recoveries. These recoveries are deducted from the program expenditures or the total expenditures

to generate an estimate of net expenditures. Repayments of loans and advance, and return on investments are not included in recoveries.

Treatment of Tax Expenditures: Provincial tax expenditures are limited to fuel tax rebates and exemptions and property tax rebates. Sales and income taxes are excluded from federal and provincial estimates.

Table C.1 and Figure C.1: Federal and Provincial Government Expenditures in Support of the Agri-Food Sector

The figures included in this table are government expenditures by various departments such as Agriculture and Agri-Food Canada, Health Canada, Transport Canada, Industry Canada and the Department of Finance. The figures also include government expenditures from various provincial departments.

Allocation of federal expenditures

- Federal expenditures by province are available for some programs only. Where allocation of such federal expenditures by province is required, the methods explained below are used.
- Program expenditures which are not available from estimates or expenditure plans are projected according to the previous three-year average program expenditures in each province.
- Operating and capital expenditures that were originally identified by province on the basis of administration centre or that were simply assigned to the National Capital Region and transfers to national organizations are allocated provincially as follows:
 - Operating and capital expenditures for the Prairie Farm Rehabilitation Administration and the Market and Industry Services Branch are allocated by province on the basis of program payments made by these organizations in each province. It is assumed that the operating and capital expenditures are proportional to program expenditures.
 - All other operating and capital expenditures and transfers to national organizations are allocated by province using a three-year moving average of the provincial distribution of Total Market Receipts (TMR) or market

receipts for specific commodities, where more appropriate. Relative levels of TMR are therefore used as a proxy value for the relative benefits derived from these programs by each province. For example, the distribution by province of Total Market Receipts from grains and oilseeds is used for the allocation by province of Canadian Grain Commission operating and capital expenditures. Total Market Receipts have been used as a basis since 2000–2001 only. Total cash receipts were used prior to that time.

- All transportation expenditures, except expenditures for the Atlantic Region Freight Assistance Transition Program, are allocated to provinces on the basis of the volume of rail shipments by province.
- The "Others" category includes monies paid to the Yukon, Northwest Territories and Nunavut as well as outside Canada for food aid assistance and monies to international organizations.

Table C.2: Government Expenditures in Support of the Agri-Food Sector, by Category

Operating Expenditures include all expenditures associated with the day-to-day operations of the department, including salaries, employee benefits, travel and purchases of goods and services, as well as the cost of administering various programs from various departments.

Capital Expenditures include charges for acquisition, construction and renovation of buildings and acquisition of physical assets such as land, property, large equipment and furnishings. Also included are amortization costs of tangible assets over their useful life.

Program Expenditures include monies paid directly or indirectly to individuals, agencies or other agricultural entities as part of a transfer payment or existing program instituted by federal and/or provincial departments or ministries.

- **Income Support and Stabilization programs** include subsidies and contributions paid under programs such as CAIS, NISA, the Dairy Subsidy Program, Safety Nets programs, most of the Companion programs and the income stabilization programs at the provincial level.

- **Ad Hoc and Cost Reduction programs** include subsidies and contributions paid under ad hoc programs such as the Grains and Oilseeds Payment Program (GOPP), BSE crisis and flood assistance programs, and adjustment/transition programs, as well as subsidies aimed at reducing production costs, such as artificial insemination and land leasing assistance. Excluded are cost reduction programs included in the categories below, such as interest rebate subsidies.
 - **Crop/Production Insurance program** includes government premiums paid to funds associated with the program.
 - **Financing Assistance** includes the Agricultural Marketing Programs Act (AMPA), which provides for the Advance Payments Program (APP) and the Price Pooling Program (PPP). It also includes the Farm Improvement and Marketing Cooperatives Loans Act (FIMCLA) and interest rebate programs, as well as provisions for doubtful accounts and provisions for probable losses on loan guarantees issued by the government.
 - **Storage and Freight programs** include subsidies and contributions made under transportation assistance programs.
 - **Social and Labour programs** include subsidies and contributions to community organizations and for general skills training, such as support to agricultural labour.
 - **Research programs** are restricted to subsidies and contributions for research activities including research for product quality improvement. Administrative costs (e.g. researchers' salaries) are excluded. See Table C.3 for further information on research and inspection expenditures.
 - **Food Inspection programs** are restricted to subsidies and contributions paid for animal health, veterinary services, product testing, disease and pest control and food quality. This category does not include administrative costs (e.g. inspectors' salaries). See Table C.3 for further information on research and inspection expenditures.
 - **Food Aid and international development programs** include subsidies and contributions for activities related to international agricultural organizations. International development projects considered are farming, agricultural processing and food projects. Also included in this category is the forgiveness of debts owed by developing countries and negotiated through the Canadian International Development Agency (CIDA). Forgiveness of debts in this category of expenditures is based on loans and lines of credit originally agreed to for agriculture and agri-food development projects in those countries. This forgiveness of international food aid debt is incorporated in the federal time series of expenditures since 1990–91.
 - **Marketing and Trade programs** include subsidies for activities related to product promotion and product and market development. This category also takes into account debt service reduction and/or reduction of the debt owed to the Canadian Wheat Board (CWB) and negotiated at the Paris Club. The debt reduction payments to the CWB are incorporated in the federal time series since 1991–92. It does not include payments made to the Export Development Corporation (EDC) in respect of the Paris Club agreement since these payments cover non-agricultural debt.
 - **Rural and Regional Development programs** include subsidies and contributions for general irrigation projects and community pastures as well as general development projects under federal/provincial agreements.
 - **Environment programs** include subsidies and contributions for activities related to the conservation of farm-related resources and wildlife, as well as expenditures for securing water supplies.
 - **Education programs** include grants paid to agricultural educational institutions.
 - **Extension programs** include subsidies and contributions paid for activities related to the provision of information, training and services to farmers such as those paid to the Canadian 4-H Council and for management of manure surpluses. Excluded is administration in the form of salaries paid to government employees for extension work. These costs are included in operating expenditures.
- Tax Expenditures:** Provincial tax expenditures include fuel tax rebates and exemptions, and property tax rebates. Sales and income taxes are excluded from both federal and provincial estimates.

Recoveries include revenues from user fees paid for services and from licenses and permits, leases and rentals, sales and royalties, land sales, transfers from one level of government to another, refunds of previous years' expenditures and previous years' recoveries including government share of program surpluses, and from other miscellaneous forms of recoveries. These recoveries are deducted from the program expenditures or the total expenditures to generate an estimate of net expenditures. The repayments of loans and advances and return on investments are not included in the recoveries.

Table C.3: Research and Inspection in Support of the Agri-Food Sector

Operating expenditures for research include as a large part researcher salaries and expenses associated with the day-to-day operations of research branches and centres working, for example, to improve production technology and product attributes in support of a competitive agri-food sector.

Operating expenditures for inspection and regulation of agricultural products include expenses associated with the day-to-day operations of inspection and control branches and centres, maintenance and coordination of network facilities and, as a large part, salaries of inspectors working in prevention and in verification and certification of commercially traded agri-food products.

Capital expenditures for research include expenditures for the acquisition of capital items such as research centres, furniture and large equipment, as well as amortization costs.

Capital expenditures for inspection and regulation include expenditures for the acquisition of capital items such as inspection plants, furniture and large equipment, and amortization costs.

Research program expenditures include grants and contributions for scientific and technological development in the agricultural sector provided to

universities, scientific organizations and individuals. Also included are expenditures related to the Matching Investment Initiative.

Inspection program expenditures include grants and contributions as well as compensation for plant and animal losses such as those paid under the Health of Animals Act and the Plant Protection Act.

Table C.4 and Figure C.3: Government Expenditures to the Agri-Food Sector as a Percentage of Agriculture GDP and Agri-Food GDP, and Table C.5: Total GDP and Total Government Expenditures

GDP is the total unduplicated value of the goods and services produced in a country or region during a given period.

GDP data are provided by the Conference Board of Canada in 1997 dollars. These data correspond to GDP data at Basic Prices reported by Statistics Canada. They are expressed in current dollars using the aggregate GDP (implicit price index) deflator also provided by the Conference Board of Canada. GDP data are presented on a quarterly basis and are grouped into fiscal years.

The overall GDP data include all sectors of activities for the total Canadian economy and are available for all provinces and Canada. "Agriculture" GDP data include all primary agriculture and related services industries. "Agri-food" GDP is defined as the sum of agriculture, food and beverage GDPs. It does not include sectors such as the transportation and storage industries, the wholesale trade industries and the retail trade industries. Food GDP data include all food industries within the manufacturing industries. Beverage GDP data include all beverage industries within the manufacturing industries and are only available for Quebec, Ontario and Alberta for confidentiality reasons.

The totals for Canada, at the federal level, include the provinces as well as Yukon, Nunavut and Northwest Territories.

SECTION D

Estimates of Support to Agriculture

Table D.1: Estimate of Support to Agriculture, Canada, 2007-2009

	2007	2008	2009 Preliminary
	(\$ Million)		
Total value of production (at farm gate)	37,021	42,109	40,279

Methodology for OECD Support Indicators

Since 1986, the Organization for Economic Cooperation and Development (OECD) has measured support for agriculture using several indicators of transfers, the most important and central one being the Producer Support Estimate (PSE). The results are the only available source of internationally comparable and transparent information on support levels in agriculture.

The PSE is a measure of the size and the type of transfers. The PSE categorizes the different types of transfers in a way to facilitate policy analysis and improve the evaluation of policy reform. Since the agricultural policy measures have evolved, the OECD has revised the classification system of the PSE to better reflect new types of measures. The OECD adopted significant changes in the nature of the generic policy categories in the PSE, changed the measure of support to commodities and improved the presentation of relevant indicators. The generic policy categories identify:

- The transfer basis for support: output, input, area/animal numbers/revenues/incomes, non-commodity criteria;
- Whether the support is based on current or non-current basis;
- Whether production is required or not.

The total PSE is no longer broken down by commodities. Instead, the total PSE is broken down into four categories reflecting the flexibility given to farmers' production decisions within the various policy measures. These categories are:

- Single Commodity Transfers (SCT);
- Group Commodity Transfers (GCT);
- All Commodity Transfers (ACT);
- Other Transfers to Producers (OCT).

Definition of categories in the PSE classification

Market Price Support (MPS): transfers from consumers and taxpayers to agricultural producers arising from policy measures that create a gap between domestic market prices and border prices of a specific agricultural commodity. Hence, MPS takes the form of an increase in the price levied by the producers and paid by the consumers of the commodity. The total amount of the support increases as the volumes produced increase. MPS

is the only form of support that has a simultaneous impact on the production and consumption of a product. MPS is also available by commodity.

Payments based on output: transfers from taxpayers to agricultural producers from policy measures based on current output of a specific agricultural commodity.

Payments based on input use: transfers from taxpayers to agricultural producers arising from policy measures based on on-farm use of inputs:

- Variable input use that reduces the on-farm cost of a specific variable input or a mix of variable inputs.
- Fixed capital formation that reduces the on-farm investment cost of farm buildings, equipment, plantations, irrigation, drainage, and soil improvements.
- On-farm services that reduce the cost of technical, accounting, commercial, sanitary and phyto-sanitary assistance and training provided to individual farmers.

Payments based on current A/An/R/I, production required: transfers from taxpayers to agricultural producers arising from policy measures based on current area, animal numbers, revenue, or income, and requiring production.

Payments based on non-current A/An/R/I, production required: transfers from taxpayers to agricultural producers arising from policy measures based on non-current (i.e. historical or fixed) area, animal numbers, revenue, or income, with current production of any commodity required.

Payments based on non-current A/An/R/I, production not required: transfers from taxpayers to agricultural producers arising from policy measures based on non-current (i.e. historical or fixed) area, animal numbers, revenue, or income, with current production of any commodity not required but optional.

- Variable rates: payment rates vary with respect to levels of current output or input prices.
- Fixed rates: payment rates do not vary with respect to these parameters.

Payments based on non-commodity criteria: transfers from taxpayers to agricultural producers arising from policy measures based on:

- Long-term resource retirement: transfers for the long-term retirement of factors of production from commodity production. The payments in this subcategory are distinguished from those requiring short-term resource retirement, which are based on commodity production criteria.
- A specific non-commodity output: transfers for the use of farm resources to produce specific non-commodity outputs of goods and services, which are not required by regulations.
- Other non-commodity criteria: transfers provided equally to all farmers, such as a flat rate or lump sum payment.

Miscellaneous payments: transfers from taxpayers to farmers for which there is a lack of information to allocate them among the appropriate categories.

Definitions of the OECD indicators of support

The classification of total transfers (TSE) associated with agricultural policies groups government policy measures into three main categories: transfers to producers (PSE), transfers to consumers (CSE), and transfers to general services to agriculture (GSSE).

Producer Support Estimate (PSE): transfers from consumers and taxpayers to agricultural producers arising from policy measures that support agriculture, regardless of their nature, objectives or impacts on farm production or income.

Percentage PSE: PSE transfers as a share of total gross farm receipts including budgetary support.

Single Commodity Transfers (SCT): transfers from policies linked to the production of a single commodity such that the producer must produce the designated commodity in order to receive the transfer. This includes broader policies where transfers are specified on a per-commodity basis. SCT is also available by commodity.

Group Commodity Transfers (GCT): transfers from policies where payments are made on the basis that one or more of a designated list of commodities is produced. That is, a producer may produce from a set of allowable commodities and receive the transfer that does not vary with respect to this decision.

All Commodity Transfers (ACT): transfers from policies that place no restrictions on the commodity produced but require the recipient to produce some commodity of their choice.

Other Transfers to Producers (OTP): transfers made under policies that do not require any commodity production.

Producer Nominal Assistance Coefficient (Producer NAC): ratio between the value of total gross farm receipts including support and gross farm receipts (at farm gate) valued at border prices (measured at farm gate).

Producer Nominal Protection Coefficient (Producer NPC): ratio between the average price received by producers (at farm gate), including payments per tonne of current output, and the border price (measured at farm gate). The PNPC is also available by commodity.

General Services Support Estimate (GSSE): transfers to general services provided to agriculture as a sector (such as research, development, training, inspection, marketing and promotion), arising from policy measures which support agriculture regardless of their nature, objectives and impacts on farm production, income, or consumption of farm products.

Unlike the PSE and CSE transfers, these transfers are not received by producers or consumers individually, and do not directly affect farm receipts (revenue) or consumption expenditure by their amount, although they may affect production and consumption of agricultural commodities.

Percentage GSSE: share of support to general services provided to agriculture in the total support to agriculture (TSE).

Consumer Support Estimate (CSE): transfers to (from) consumers of agricultural commodities arising from policy measures which support agriculture, regardless of their nature, objectives or impacts on consumption of farm products.

The CSE is composed of explicit and implicit transfers from consumers to agricultural producers associated with market price support for agricultural products produced and consumed domestically (Transfers to producers from consumers), as well as transfers to the budget and/or to importers on the share of consumption that is imported (Other transfers from consumers).

This indicator is measured net of any transfers to consumers to offset their contribution to market price support of a specific commodity (Transfers to consumers from taxpayers), as well as the contribution of producers (as consumers of domestically produced crops) to market price support on crops used in animal feed (Excess feed cost).

When the CSE is negative, this indicates transfers from consumers, and measures the implicit tax on consumption associated with policies promoting the agricultural sector. Although consumption expenditure is increased or reduced by the amount of the implicit tax or payments, this indicator is not in itself an estimate of the impact on consumption expenditure.

Percentage CSE: ratio of the total value of consumption expenditure on commodities domestically produced and the value of total consumption minus budgetary support to consumers. It measures the implicit tax (or subsidy, if CSE is positive) on consumers as a share of consumption expenditure.

Consumer Nominal Assistance Coefficient (Consumer NAC): ratio between the value of consumption expenditure on agricultural commodities (at farm gate) and that valued at border prices.

Consumer Nominal Protection Coefficient (Consumer NPC): ratio between the average price paid by consumers (at farm gate) and the border price (measured at farm gate). The Consumer NPC is also available by commodity.

Total Support Estimate (TSE): transfers from taxpayers and consumers arising from policy measures that support agriculture, net of the associated budgetary receipts, regardless of their objectives and impacts on farm production and income, or consumption of farm products.

The TSE is the sum of the following transfers:

- 1) Explicit and implicit gross transfers from consumers of agricultural commodities to agricultural producers net of producer financial contributions (which appear in MPS and CSE);
- 2) Gross transfers from taxpayers to agricultural producers (in PSE);
- 3) Gross transfers from taxpayers to general services provided to agriculture (GSSE);
- 4) Gross transfers from taxpayers to consumers of agricultural commodities (in CSE).

As the transfers from consumers to producers are included in the MPS, the TSE is also the sum of the PSE, the GSSE, and the transfers from taxpayers to consumers (in the CSE). The TSE measures the overall cost of agricultural support financed by consumers (Transfers from consumers), and taxpayers (Transfers from taxpayers), net of import receipts (Budget revenues).

Percentage TSE: (%TSE): the share of total support to agriculture in the total Gross Domestic Product (GDP).

Treatment of taxes and levies

The PSE and CSE are defined as net of producer contributions which help finance policy measures that provide support to producers. In the same way, the receipts from production taxes and levies designed to finance a given measure are also deducted from the total amount of the payment provided to producers as a result of that measure.

The case of negative support

The concept of the PSE as a "gross" measure allows for cases of negative support. This is the case with agricultural policy measures that act as a tax on producers relative to the situation in the absence of such measures - i.e. if only general economy-wide policies were in place. The typical example of negative support is an export tax, or any other agricultural policy measure discouraging exports and resulting in a domestic price lower than the world price.

Meaning and interpretation of the main indicators

Producer Support Estimate (PSE) and producer Nominal Assistance Coefficient (Producer NAC)

The PSE is a static measure of support provided to agricultural producers in a given time period (e.g. one year or season) as defined by general macroeconomic conditions in the context of economy-wide policies.

For example, a situation of zero support to agriculture would occur when there are only general economy-wide policies in place with no policies specifically altering the transmission of the general macroeconomic condition for agriculture. In such situations, current total farm receipts would be generated entirely in the market without any policy-linked transfers to farmers. This can be seen as an extreme situation.

Thus, a percentage PSE of 60%, for example, expresses the share of transfers to agricultural producers in the total value of gross farm receipts (as measured by the PSE), or the share of gross farm receipts derived from policies. Hence 40% of gross farm receipts is derived from the market without any support.

When the producer NAC is equal to one, this means that gross farm receipts are entirely derived from the market without any budgetary support. Therefore, the higher the producer NAC, the lower the share of gross farm receipts derived from the market. For instance, a producer NAC of 2.50 means that the value of gross farm receipts is two and a half times what it would be if entirely obtained at world prices without any policy support.

Consumer Support Estimate (CSE) and Consumer Nominal Assistance Coefficient (Consumer NAC)

A percentage CSE of -60% indicates that 60% of total consumption expenditure on agricultural commodities represents a transfer from consumers to producers, or the share of the consumption expenditure created by policies.

When the consumer NAC is equal to one, this means that total consumption expenditure on agricultural commodities is at market prices, without any support to producers and consumers. Therefore, the higher the consumer NAC, the less the share of consumption expenditure reflects the market. For example, a consumer NAC of 2.50 indicates that consumer spending is two and a half times what it would be if conducted entirely at world market prices without any budgetary support to consumers.

Calculating Market Price Support (MPS)

Market Price Support (MPS) is only calculated where there are policies that alter the transmission of the general macroeconomic conditions to agricultural producers and create a "price gap" with transfers from consumers to producers.

Percentage GSSE and percentage TSE

The percentage GSSE measures the share of transfers to general services provided to agriculture in the total support to agriculture (TSE), and thus indicates the relative weight of the transfers that fall under the TSE and GSSE in each country.

All other things being equal, the lower the percentage GSSE, the higher the share of PSE transfers within the total support to agriculture and the greater the associated impacts on production and trade.

The percentage TSE measures the share of total support to agriculture in a country's GDP or the share of national income used to support agriculture. It is influenced by the importance of the agricultural sector in the economy.

Therefore, the higher the percentage TSE, the larger the share of national income used to support agriculture.

Note: In order to improve comparability and consistency across countries regarding information reported under GSSE, the OECD is currently undertaking a study that will review programs and policies presently reported under GSSE and examine if they are correctly classified. This study will also seek important gaps in the information reported under GSSE. It is expected that the OECD will develop a new methodology for deriving GSSE values on the basis of this review
