La Prestation nationale pour enfants chez les Premières nations - Rapport d'étape 2000

It is our pleasure, on behalf of the Social Policy and Programs Branch, to have collaborated with First Nations across the country to publish this 1st Annual Progress Report on the National Child Benefit for First Nations and to re-affirm the federal government's commitment to support First Nations' continued involvement in the National Child Benefit (NCB) initiative.

T

he National Child Benefit initiative was implemented in July 1998 after First Ministers of Social Services agreed that the federal, provincial and territorial governments, and First Nations that deliver social assistance should work together to address the issue of child poverty in Canada.

This joint initiative provides families with the supports and services, outside of social assistance, they need to provide a better life for themselves and their children.

To make it easier for families to break the cycle of poverty, the National Child Benefit aims to ensure that no family has to choose between a job and benefits for their children. The National Child Benefit initiative helps prevent and reduce the depth of child poverty, reinforcing that families will always be better off as a result of parents working, and reduces program overlap and duplication of programs and services.

First Nations play an important role in the design and delivery of the programs and services funded under the National Child Benefit. Similar to most provinces and territories, First Nations that deliver social assistance have the flexibility to reinvest savings in programs and services that fit the needs and priorities of their individual communities.

First Nations determine their own reinvestment initiatives in ways that meet local needs and priorities whether it is introducing new programs and services for families with children, or enhancing the current range of community-based employment support programs.

As we head into the third year of the National Child Benefit, it is important to reflect on how the National Child Benefit makes a difference in the lives and communities of First Nations. This is the goal of the Progress Report, written specifically with First Nations in mind and to highlight the impact the National Child Benefit has had and continues to have in First Nations communities.

The Children's Program Directorate

SEEING THE POSSIBILITIES, MAKING A DIFFERENCE

Thank you to all those who participated and assisted in the National Child Benefit self- evaluation process of 1999-2000.

Social Policy and Programs, Indian and
Northern Affairs Canada.

Executive Summary 4

Chapter 1 - Purpose of this Report 5

Chapter 2 - The National Child Benefit 6

- An Overview
- How It Works
- Provincial/Territorial Investments in Children
- Summary

Chapter 3 - First Nations and the National Child Benefit 9

- First Nations' Children in Canada
- Recent Successes
- First Nations and the National Child Benefit
- First Nations Reinvestment Programs
- Who Benefits
- 1998-1999 Data
- 1999-2000 Data
- 2000-2001 Data
- Summary

Chapter 4 - Sharing the Story 17

Child Care

- Pikangikum First Nation, Ontario - Abinogeesh-Wi-Gamik or "Kid's Place"

Nutrition

- Brokenhead Ojibway First Nation, Manitoba - Sergeant Tommy Prince School Breakfast Program
- Poplar River First Nation, Manitoba - Infant Milk Formula Subsidy Program

Early Child Development

- O'Chiese First Nation, Alberta - Early Child Development Program

Employment/Training

- Kanesatake First Nation, Quebec - Men's Mentor Program

Other

- Carry the Kettle First Nation, Saskatchewan - Emergency Family Support Program
- Kanesatake First Nation, Quebec - Dressed for Winter Program
- Skookum Jim Friendship Centre, Whitehorse, Yukon - Youth Development Programs
- Squamish First Nation, British Columbia - Ayateway Squamish Nation Cultural Development Camp

Chapter 5 - Monitoring Progress 24

- The Evaluation and Accountability Framework
- Monitoring and Evaluation Activities
- The Self-Evaluation Process

Chapter 6 - Lessons Learned 29

Chapter 7 - Next Steps 31

Appendices

- Appendix 1 - First Nations Expenditures Data by Program Area 32
- Appendix 2 - Provincial/Territorial Investments in Children 33
- Appendix 3 - First Nation Self-Evaluation Participants 35
- Appendix 4 - Indian and Northern Affairs Canada Information Contacts 36

The National Child Benefit (NCB)

- The National Child Benefit is a joint federal/provincial/territorial initiative that supports children and families¹.
- The three objectives of the National Child Benefit are to help prevent and reduce the depth of child poverty, to promote an attachment to the workforce, and to reduce program overlap and duplication.
- The National Child Benefit initiative consists of a series of programs and services across Canada designed to improve benefits and services for low-income families with children and represents a significant investment in Canada's children.

National Child Benefit Reinvestment Guidelines

- National Child Benefit reinvestments are an opportunity for First Nations to develop innovative programs that meet the objectives of the National Child Benefit and the unique circumstances of First Nations communities.
- In 1998-1999, First Nations had approximately \$30.8 million available for reinvestment in National Child Benefit programs. This amount increased by approximately \$20 million in 1999-2000, for a total of \$48.76 million.
- The types of programs and services for parents and their children fall into five broad areas: child/day care, child nutrition, early child development, employment and training opportunities, and other, e.g., cultural and traditional teachings, recreation, youth development.

Monitoring Progress

- Ongoing monitoring and periodic evaluation by federal/provincial/territorial governments and First Nations of the National Child Benefit and its impact on child poverty levels is essential to ensure the goals of the program are being met.
- An evaluation of the National Child Benefit and its effectiveness on First Nations and First Nations communities will consider the impact the broad range of reinvestment programs are having on these communities.
- First Nations participation in the evaluation process includes a working relationship with the Assembly of First Nations, First Nations members participating on the First Nations National Child Benefit Evaluation Working Group, feedback from First Nations communities to produce the short- and medium-term program outcomes, First Nations self-evaluations of the reinvestment projects, and First Nations interviews and dialogue circles to feed into the interim and final evaluations.

1 The Government of Quebec, although agreeing with the basic principles of the National Child Benefit which aims to increase the resources available for poor children and promote employment retention and the return to work, has not taken part in its development because it wishes to assume control of income support for the children of Quebec. Consequently, any reference to joint federal/provincial/territorial positions in this report does not include Quebec. The family policy implemented by Quebec is consistent with the National Child Benefit.

The first edition of the First Nations National Child Benefit Progress Report 2000 is written specifically for First Nations. It is based on information, both narrative and numerical, that reflects First Nations' experience with the National Child Benefit reinvestment component and reports on the impact it is having on First Nations and their communities.

The National Child Benefit reinvestment component aims to provide a sense of community ownership for the programs designed by First Nations, to address specifically the diverse and unique needs of First Nations communities. This may be done in a variety of ways. For example, some communities have developed "health and wellness strategies" that reflect a long-term vision and the established goals the community has developed for its population. Here, the National Child Benefit reinvestment funds may be used to address one or more aspects of these strategies. Such that, if a community aimed to teach its young people about nutrition and the importance of a healthy breakfast to begin the day, nutrition and school breakfast programs may be established through the National Child Benefit to meet this goal. In other instances, communities have initiated new programs with National Child Benefit funds that otherwise would not be available, for example, cultural and traditional programs.

The primary purpose of this Progress Report is to "tell the story" and to illustrate examples of how First Nations have implemented the National Child Benefit reinvestment component which provides flexibility and variability for First Nations to design and develop innovative community-based programs for their children and to strengthen their communities for future generations. The range of programs varies from community to community.

As the Progress Report illustrates, First Nations can be proud of the innovative and creative programs they build through National Child Benefit reinvestments to help provide a better lifestyle for families. This Progress Report establishes a forum to share with First Nations across Canada and with the rest of the Canadian population how the National Child Benefit reinvestment initiative has been implemented in First Nations communities.

COUNCIL HURON-WENDAT NATION, QUEBEC

Has used National Child Benefit reinvestment funds to run *Agoshin Counter*, a nutrition and clothing centre that has created jobs for two social assistance recipients and provides regular services to low-income families with children. These services include provision of low-cost food and clothing, and the utility of a collective kitchen, a meeting place and a reference service to assist people in gaining access to the resources they need.

AN OVERVIEW

Over the last decade, the Government of Canada has undertaken a range of actions to make children and their well-being a high priority. These actions include policy strategies, new and enhanced programs, legislative change, and initiatives with the voluntary and private sectors. Some examples include the National Child Benefit (NCB) and the National Children's Agenda, the core of which is its vision and values for children, founded on the belief that children's well-being is a priority for all Canadians.

Reducing poverty, particularly among families with children, has been an ongoing priority of governments across Canada. In addition to economic insecurity and hardship, poverty often means lost opportunities to participate meaningfully in community and public life. Among the key actions taken to address child and family poverty has been the creation of the National Child Benefit system, a joint federal-provincial-territorial-First Nations initiative. It involves simultaneous actions from all levels of government. The federal, provincial and territorial governments work together to make investing in children a national priority. This co-operation between governments on behalf of children is a central element to the National Child Benefit system.

Prior to its implementation in July 1998, parents working at low wages received lower child-related benefits than parents relying on social assistance. As a result, parents often had to choose between staying on social assistance to retain important benefits for their children or taking a job and risk losing these benefits.

The National Child Benefit has three objectives: prevent and reduce child poverty, help parents of low-income families participate in the work force and reduce program overlap and duplication through closer harmonization of programs and simplified administration.

HOW IT WORKS

The Government of Canada delivers its contribution to the National Child Benefit through the tax system. In the 1997 and 1998 budgets, it invested \$1.7 billion annually in this national undertaking. This investment continued in the 1999 and 2000 budgets with an additional investment of \$850 million each year. As a result, federal government income support for families with children increased by approximately 40 percent. Most of this additional investment is targeted to low-income families with children.

The National Child Benefit combines a financial benefit to parents, in the form of the Canada Child Tax Benefit (CCTB), with increased availability and access to programs and supports within their community. The CCTB combines the Canada Tax Benefit (CTB) and the National Child Benefit Supplement (NCBS) to provide a monthly payment to families with children under the age of 18.

The National Child Benefit combines new federal investments with provincial, territorial and First Nations "re-allocations" of resources. The federal government increased its income support for low-income families through the Canada Child Tax Benefit and the National Child Benefit Supplement, ensuring that no one received less money than in previous years. Provinces, territories and First Nations adjust social assistance for recipients with children by an amount equal to the federal increase. These adjustments are then "reinvested" into community-based programs for low-income families.

Children who are well cared for today are more likely to be healthy, responsible and caring adults.

The National Child Benefit represents a significant new investment in Canada's children.

- National Child Benefit Progress Report; 1999

PROVINCIAL/TERRITORIAL INVESTMENTS IN CHILDREN

When a province or territory invests more than the value of its adjustments to social assistance, Indian and Northern Affairs Canada (INAC) may increase the financial resources allocated to these provinces and territories to ensure that First Nations children and families have access to an equivalent level of programming and services available more broadly in the jurisdiction. This was the case for Saskatchewan and the Yukon.

Saskatchewan

In the first phase of the National Child Benefit (1998-1999), Saskatchewan invested a total of \$13.01 million on National Child Benefit initiatives during the nine months from July 1, 1998 to March 31, 1999. The province devoted reinvestment funds to three new children's programs: the *Saskatchewan Child Benefit* (SCB), the *Saskatchewan Employment Supplement* (SES), and the *Family Health Benefits*. Additional federal funds were required to ensure that comparable income support programs were available on reserve for First Nations residing in Saskatchewan.

Yukon

In 1999-2000 Yukon committed approximately \$600,000 in additional funds to implement the *Yukon Child Benefit* (YCB), a benefit that provides additional income support to low-income families, whether they are low-wage earners or social assistance recipients. This commitment of funds is over and above the reinvestment funds freed up through the implementation of the second phase of the National Child Benefit in 1998-1999, and subsequent offsets to the Yukon government's social assistance expenditures. In the Yukon, INAC funds social assistance for all Registered Indians in the territory, both on and off reserve.

The *Yukon Child Benefit* is a universal program for all families with children under 18 years of age and is designed to ensure that Yukon families on social assistance and working families with low incomes receive financial support to help with the costs of raising children. The benefit is tax free and is not considered as income when calculating social assistance benefits. The full benefit of \$300 per year per child is available for families with net incomes below \$16,700.

SUMMARY

Consistent with the objectives of the National Child Benefit initiative, these programs aim to prevent and reduce the depth of child poverty, promote an attachment to the work force, and reduce overlap and duplication.

MUSKODAY FIRST NATION, SASKATCHEWAN

Using National Child Benefit funds, the community implemented a program that teaches basic life skills including maintaining commitments to new employment, adjusting to new working hours, time management, money management, responsibility and leadership. This program is offered to parents to assist them in acquiring the necessary skills for participation in the labour market.

FIRST NATIONS' CHILDREN IN CANADA

The Government of Canada is working to enhance the well-being of Aboriginal peoples, including Aboriginal children, to ensure that all Canadians share in the collective benefits of Canada's international success as a desirable place to live. Under *Gathering Strength - Canada's Aboriginal Action Plan*, there exists a focus on strong communities, people and economies. To this end, the federal government has a responsibility to ensure that programs exist for First Nations children on-reserve that are comparable to those available more broadly for Canadian children, and that promote the development of First Nations communities.

The context for government action for children and families is also shaped by the country's changing demographic profile. In particular, with a higher birth rate than the Canadian average, Aboriginal children represent the fastest growing population in Canada. Aboriginal people within Canada represent approximately 4.5 percent of the total Canadian population, a percentage that has almost doubled across the country over the last 15 years.

The differences in socio-economic conditions between Registered Indians², First Nations members living on-reserve and the total Canadian population are apparent both within First Nations communities and throughout the larger population of Canada. In 1996, the average number of children for the Registered Indian population on-reserve was 2.1 per family, compared to 1.2 for the entire Canadian population. The First Nations' birth rate of 27 births per 1,000 people is twice the Canadian average. Infant mortality, while improving, is still double that of the non-Aboriginal population.

In 1996, almost one third of Aboriginal children under 15 years of age lived in a lone-parent family, twice the rate within the general population; 40 percent of Aboriginal children living in urban centres live in lone-parent families. According to the 1996 Census, the prevalence of Registered Indian female lone-parent families (23 percent) is about twice the rate reported for female lone-parent families in the Canadian population (12.1 percent). Compared to the Canadian population as a whole, male lone-parent families were nearly twice as common among Registered Indians living on-reserve in 1996.

² The term "Registered Indian" is applied to individuals, both on- and off-reserve, registered under the *Indian Act*.

RECENT SUCCESSES

Registered Indians (both on- and off-reserve) are making steady gains in educational achievement, and more Registered Indians are completing their education. The post-secondary enrolment rate for the Registered Indian population aged 17 to 34 has remained relatively constant. The number of Registered Indians enrolled in post-secondary institutions almost doubled between 1988-1989 and 1998-1999, and the percentage of Registered Indians with university degrees has increased approximately 50 percent since 1996.

In 1996, of the Registered Indian population 15 years of age and over attending school, 80.5 percent were attending full time, 10 percent more than the total Canadian population. A further narrowing of the earnings gap was realized between 1990 and 1995. For Registered Indians living on-reserve, an increase was noted for those who completed trades or non-university training between 1991 and 1996. Within the Registered Indian population, women's employment earnings as a percentage of men's rose between 1990 and 1995.

FIRST NATIONS AND THE NATIONAL CHILD BENEFIT

The National Child Benefit for First Nations operates differently than for the provinces and territories. Although the overall goals and objectives are the same in all instances, First Nations tend to focus on reducing the depth of child poverty and promoting an attachment to the labour market. This is accomplished primarily through the reinvestment component of the National Child Benefit.

First Nations play a significant role in the implementation of the National Child Benefit as they administer the reinvestment component. Similar to the provinces and territories, First Nations that deliver social assistance have the flexibility to reinvest savings from adjustments made through social assistance, in programs and services tailored to meet their needs and priorities while maintaining the overall goals of the National Child Benefit.

There are approximately 600 First Nations across the country that participate in the National Child Benefit program. Each community implements the National Child Benefit reinvestment programs according to existing guidelines within the province or territory of residence. Once implemented, First Nations are required by INAC to report annually on how National Child Benefit monies are used and how many children and families benefit from the program. The information contained in this Progress Report has been compiled from this information.

The National Child Benefit allowed us to have money and services to do prevention in the community, and how you do prevention in the communities is with children and families and particularly prevention starts with young children and you work your way up.

- Jon Spotted Eagle, Okanagan First Nation

In the first year of the National Child Benefit, First Nations reinvested approximately \$30.3 million in programs to benefit their children and families. In 1999-2000, this amount increased to approximately \$48.26 million, an increase of about \$20 million over 1998-1999. Projections for 2000-2001 are estimated at about \$55.19 million.

FIRST NATIONS REINVESTMENT PROGRAMS

The National Child Benefit reinvestment component provides a sense of community ownership of the programs developed because they are designed by First Nations, to address the diverse and unique needs of First Nations communities. The reinvestment component provides flexibility and variability for First Nations to design and develop innovative community-based programs that are culturally relevant, respond to the specific and unique needs of the community and support children and their families living on reserve.

Programs undertaken by First Nations vary from community to community and tend to cover a wider range of program areas than those of their provincial and territorial counterparts. The reason for this is twofold: the National Child Benefit amounts available to First Nations vary according to the size and population of the community, and First Nations tailor their reinvestments to meet the specific needs of their individual communities. For example, First Nations living in the same province or territory may focus on different areas for reinvestment based on the priorities and the situation within their community, as long as they relate back to the goals of the National Child Benefit.

National Child Benefit reinvestment programs for First Nations fall into five broad program areas:

Child/Day Care - Programs directed toward the development and enhancement of day care facilities and the provision of child-care services which allow more families with low incomes to gain access to day care spaces, or to have their share of child-care costs reduced. Child/day care programs include enhancements to existing day care centres, increasing the number of day care spaces, and child care for children of parents on employment/training programs.

Child Nutrition - Programs directed at improving the health and well-being of children by providing school meal programs as well as education to parents on family nutrition and meal preparation. Some examples include: educational programs aimed at nutrition, food hampers, and meal programs (hot lunches, breakfasts and snacks) provided in school.

Early Child Development - Programs directed at early intervention for parents to help their children with a healthy start in life. Some examples include parenting skills programs and drop-in centres for parents.

Employment Opportunities/Training Programs - These programs are directed at increasing the skill level of individuals and thereby increasing their chances of obtaining work. Examples include employment and skills development, youth summer work programs and personal development workshops.

Other - National Child Benefit programs that fall into the category of "other" represent a broad range of areas (e.g., cultural awareness or traditional teachings, recreation activities, and income supplements for low-income families).

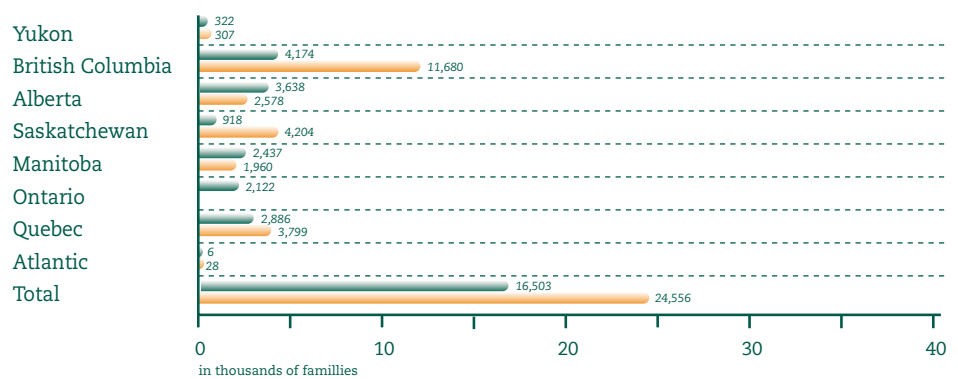

WHO BENEFITS

Although difficult to assess the number of children and families specifically benefiting under the National Child Benefit, it is evident that a significant number of First Nations are involved in reinvestment programs. While the figures that follow were submitted by First Nations, there may be more children benefiting than are represented in the numbers. In some instances, First Nations combined resources with existing resources allocated for a current program (e.g., Aboriginal Head Start, First Nation and Inuit Child Care). The data includes only those First Nations for which NCB has funding responsibility and excludes self-governing First Nations in the regions of the Atlantic, Quebec, British Columbia and Yukon.

NATIONAL CHILD BENEFIT INITIATIVES BENEFICIARIES

Approximate number of Families

Approximate number of Children

■ 1998-1999
■ 1999-2000

Note:

- 1998-1999 Yukon, the number of reporting First Nations was revised to reflect the 8 First Nations who submitted their data.
- 1999-2000 Ontario, the information was not available.
Atlantic, the information is incomplete.

1998-1999 Data

FUNDS AVAILABLE TO FIRST NATIONS FOR NATIONAL CHILD BENEFIT INITIATIVES

Region	Projected Funds Available for NCB Initiatives (\$ M) ³
Yukon	\$ 0.2
British Columbia	\$ 2.3
Alberta	\$ 1.7
Saskatchewan	\$ 4.4
Manitoba	\$ 4.3
Ontario ⁴	\$ 2.7
Quebec ⁵	\$ 7.5
Atlantic ⁶	\$ 1.0
Total	\$ 24.1
Additional Reinvestment Envelope ⁷	\$ 6.7
Final Total	\$ 30.8

- 3 Bands funded under multi-year agreements (e.g., Alternative Funding Arrangements, Financial Transfer Agreements and Canada/First Nation Funding Agreements) are excluded from the totals in British Columbia, Alberta, Ontario and the Atlantic. Funding for social assistance and National Child Benefit-related initiatives in the Northwest Territories and Nunavut are provided by the territorial governments. As well, self-governing bands in Yukon are excluded.
- 4 These amounts do not include the sole support cases remaining with the Ministry of Community Social Services, that may have been transferred before March 31, 2000 for the region of Ontario.
- 5 For the Quebec region, the amount includes savings from the New Family Allowance and the National Child Benefit Supplement. The total includes financial transfer agreements estimated savings for eight communities.
- 6 Figures for the Atlantic regions do not include New Brunswick.
- 7 The Additional Reinvestment Envelope is based on additional monies received by provinces/territories to the extent that they further invest in National Child Benefit-related income support and benefit programs beyond the level of their federal National Child Benefit reinvested savings. When a province or territory reinvests more than the value of its reimbursements in income support programs, INAC may be required to increase resources to enable First Nations living on-reserve to access an equivalent level of programming and services. For example, in 1998-1999, Saskatchewan implemented the Saskatchewan Child Benefit. An additional \$8.1 million was available for reinvestment.

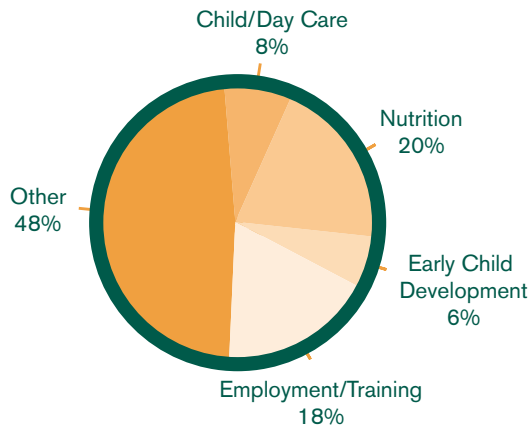

When I started looking at the criteria and the funding that was available through the National Child Benefit, we found out that there was a lot that we could do.

- Lorna Joseph, Squamish First Nation

FIRST NATIONS REINVESTMENTS BY PROGRAM AREA

In order of priority, the following areas were the focus of reinvestment in 1998-1999 by First Nations:

For First Nation communities across Canada, the National Child Benefit is making a difference.

- Adam Beach, First Nations Actor, "Seeing the Possibilities, Making a Difference" video

The breakdown of First Nations expenditures by program area are as follows:

ACTUAL EXPENDITURES IN 1998-1999 ON NATIONAL CHILD BENEFIT INITIATIVES ⁸

NCB Initiatives by Program Type	Actual Total Expenditures on NCB Initiatives (\$M)
Child/Day Care	\$ 810,589.00
Child Nutrition	\$ 4,029,434.04
Early Child Development	\$ 389,238.00
Employment Opportunities/Training	\$ 4,066,230.00
Other	\$ 5,776,075.91
Sub-Total ⁹	\$ 15,471,566.95
Additional Reinvestment Envelope	\$ 6,700,000.00
Additional Regional Reinvestment ¹⁰	\$ 174,690.95
Additional Expenditures by First Nations with Multi-year agreements and Comprehensive Funding agreements ¹¹	\$ 8,693,431.00
Total Reported Expenditures	\$ 31,039,688.90

⁸ These figures were compiled from data reported to INAC by First Nations.

⁹ Includes amount of \$400,000 in Ontario which was not broken down by program area.

¹⁰ The region of Alberta expended an additional amount beyond its projected stated total of \$1.7 million for 1998-1999.

¹¹ In some cases, First Nations were unable to deliver the reinvestment program in 1998-1999, but will do so in 1999-2000. In the case of First Nations under multi-year agreements, we are not able to provide program results and expenditures due to the specific conditions of this type of agreement. The National Child Benefit monies are included in their core budget for which they already have management flexibility. They have developed their own approach to the National Child Benefit, which can be verified through a federal transfer agreement regional management assessment. In the case of First Nations under reimbursable funding agreements, not all First Nations that received National Child Benefit funding submitted a formal report to INAC. This is due, in part, because the money was received by the First Nation late in the fiscal year which did not enable time to develop and implement National Child Benefit-specific initiatives. Therefore some First Nations subsidized existing programs that benefited children on-reserve (e.g., First Nation and Inuit Child Care, Aboriginal Head Start).

1999-2000 Data

The year 1999-2000 marked the beginning of the second phase of the National Child Benefit. At this time, the federal government invested an additional \$850 million in the National Child Benefit system. This translated into a reinvestment by First Nations in programs and services for families with children of approximately \$48 million. Based on reinvestment trends established in the first year of the National Child Benefit, it is anticipated that First Nations will continue to support similar programs, although community priorities may shift from year to year.

PROJECTED NATIONAL CHILD BENEFIT REINVESTMENT FUNDS

Region	Projected Funds Available for NCB Initiatives (\$M) ¹²
Yukon ¹³	\$ 0.36
British Columbia	\$ 3.40
Alberta	\$ 3.50
Saskatchewan	\$ 8.60
Manitoba	\$ 8.40
Ontario	\$ 5.30
Quebec	\$ 8.50
Atlantic ¹⁴	\$ 2.10
Total	\$ 40.16
Additional Reinvestment Envelope	\$ 8.60
Final Total	\$ 48.76

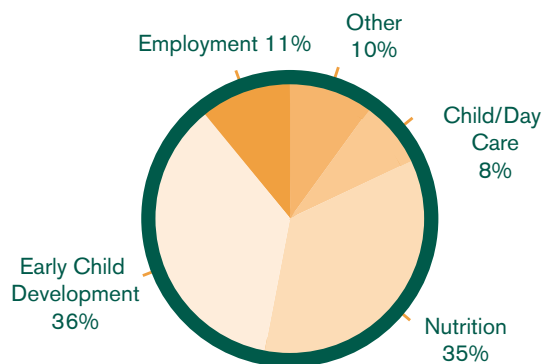

12 In calculating the figures for subsequent years, the preceding footnotes for 1998-1999 figures apply for both 1999-2000 and 2000-2001 projections.

13 Could be subject to change if a First Nation signs a self-government agreement.

14 This number is based on INAC headquarter's estimates.

FIRST NATIONS REINVESTMENTS BY PROGRAM AREA

In order of priority, the following areas were the focus of National Child Reinvestment funds for 1999-2000 ¹⁵:

15 This information was compiled based on a "snapshot" in time and reflects 31.3 percent of total data received from First Nations.

2000-2001 Data

PROJECTED NATIONAL CHILD BENEFIT REINVESTMENT FUNDS

Region	Projected Funds Available for NCB Initiatives (\$M)
Yukon	\$ 0.95
British Columbia	\$ 4.20
Alberta	\$ 4.20
Saskatchewan	\$ 11.50
Manitoba	\$ 8.40
Ontario	\$ 6.30
Quebec	\$ 8.50
Atlantic ¹⁶	\$ 3.00
Total	\$ 46.85
Additional Reinvestment Envelope ¹⁷	
Saskatchewan	\$ 8.10
Yukon	\$ 0.24
Total	\$ 55.19

¹⁶ This number is based on INAC headquarter's estimates.

¹⁷ In 1999, \$240,000 was secured for Yukon to implement the Yukon Child Benefit in First Nation communities.

SUMMARY

Reinvestments by First Nations tend to cover a wider range of program areas than those of their provincial and territorial counterparts; First Nations tailor their reinvestments to meet the specific needs of their individual communities. For example, First Nations living in the same province or territory may focus on different areas for reinvestment based on the priorities and the situation within their community. The uniqueness can be appreciated through the examples of current operational programs in the next chapter.

It's important to bring back a lot of the teachings.
A lot of us have missed that.

- Language Teacher, Chehalis First Nation

YELLOWQUILL FIRST NATION, SASKATCHEWAN

To provide youth with an opportunity to participate and practice traditional craftsmanship in a variety of trades, band elders established a program with activities ranging from storytelling to recreational sports. The youth involved in this program worked with a variety of band departments and were exposed to a variety of activities (e.g., home care renovation, clerical work, etc.). The benefits to be gained by this program were to encourage a positive social interaction and to provide motivation for youth to learn new skills that will allow them to participate in the labour market.

Reinvestment is an opportunity for First Nations to develop innovative programs. Each region uses its provincial or territorial model and the *National NCB Reinvestment Framework* to guide reinvestment initiatives and to develop a region-specific framework for National Child Benefit reinvestment. The onus is on First Nations to ensure that reinvestment initiatives meet the objectives of the National Child Benefit. Activities not eligible for reinvestment funds include construction or financing of new houses, capital investments including recreational facilities or playgrounds, or the provision of a shelter allowance.

Abinogeesh-Wi-Gamik or "Kid's Place,"
Pikangikum First Nation, Northern Ontario

CHILD CARE

PIKANGIKUM FIRST NATION, ONTARIO ABINOGEESH-WI-GAMIK OR "KID'S PLACE"

Pikangikum community, located north of Sioux Lookout in Northern Ontario, had limited activities for its children and youth. This led to other social problems such as vandalism. In response, Pikangikum created *Abinogeesh-Wi-Gamik*, a children's drop-in centre, to provide an opportunity for the children and youth of the community to use their minds in a learning environment. The program, which began in July 1999, is available to children aged 6 to 13.

The program is held throughout the summer months in an old Mennonite church. It runs weekdays from 11 a.m. until 10 p.m. It is also available during holidays and professional development days throughout the school year. *Abinogeesh-Wi-Gamik* is co-ordinated by a full-time employee who has a staff of 11 to assist in the operation of the program.

By providing a learning environment with a focus on crafts and recreation, the program enhances the health, well-being and fitness levels of the community's children and fosters self-esteem, teamwork, leadership and interpersonal skills. Some typical activities available for the children include indoor and outdoor games, reading, sharing circles, mural painting, movies and tae-bo. Activities vary daily according to attendance.

The future of *Abinogeesh-Wi-Gamik* is promising, as the staff is innovative and dynamic and supported in its efforts by the Band Council. The staff plan to incorporate educational ventures, such as science camps in future years. It also hopes to involve the parents and the rest of the community in *Abinogeesh-Wi-Gamik* by organizing a dinner for the community using food grown by the children in a garden planted as part of the program.

Abitibiwinni First Nation-Art Class,
Pikogan, Quebec

Abinogeesh-Wi-Gamik is an excellent example of a community combining the National Child Benefit reinvestments funds with financial resources available through other federal programs to develop an initiative that responds to the community's individual needs. The majority of the staff are participants of the Youth Employment Strategy Work Placement Program, and the snacks and meals throughout the day are provided through the Head Start Program.

This program helps provide a place for the kids. It is something to keep them occupied.
Co-ordinator, Abinogeesh-Wi-Gamik

NUTRITION

BROKENHEAD OJIBWAY FIRST NATION, MANITOBA SERGEANT TOMMY PRINCE SCHOOL BREAKFAST PROGRAM

The rural community of Brokenhead is named for the Brokenhead River, which passes through the municipality located northeast of Winnipeg. The community consists of approximately 1,300 individuals; however, the actual population registered on-reserve numbers only 600.

In an effort to promote a healthy lifestyle and good nutritional habits in school-aged children, and contribute to better school performance, the community initiated the Sergeant Tommy Prince Breakfast Program. This program ensures that the nutritional needs of the on-reserve daycare children are met. This program enhanced an existing breakfast program offered at the day care that now reaches approximately 60 nursery to grade 6 students at Sergeant Tommy Prince School.

The program provides each child attending the Brokenhead Ojibway Nation Day Care with breakfast and two snacks per day. The day care plans, prepares and provides these meals to the children throughout the day. When possible, the children assist in the preparation and the planning of their meals as well as snacks.

By combining efforts with the existing day care centre, and through the additional financial resources provided by the National Child Benefit, the community is able to employ a community member to oversee the planning and the preparation of the meals and snacks. This has allowed for an expansion of the previous menu, to include items such as milk, cereal, fruit, toast, hot breakfast items and juice. The community has also been able to facilitate the preparation of these meals with the purchase of toasters and other cooking items. The community plans to continue the program.

POPLAR RIVER FIRST NATION, MANITOBA INFANT MILK FORMULA SUBSIDY PROGRAM

Located north of Winnipeg, in a remote fly-in area, lies the small Ojibway community of Poplar River. To assist young parents in becoming self-sufficient, the community has implemented a wide range of initiatives under the National Child Benefit.

One initiative is the *Infant Milk Formula Program*. In March 1999, social services assessed the needs of infants, specifically those who required formula. This assessment uncovered a concern related to the high cost of infant formula and its unavailability due to the community's remoteness. In an attempt to alleviate this problem, arrangements were made with the local Northern Store to have a special order flown in. Because it was a bulk order, the community received a 20 to 25 percent discount on the overall cost of the formula. Approximately 36 families with infants benefited.

EARLY CHILD DEVELOPMENT

O'CHIESE FIRST NATION, ALBERTA EARLY CHILDHOOD DEVELOPMENT PROGRAM

The O'Chiese First Nation, located northwest of Rocky Mountain House in central Alberta, is a relatively small community with a total registered population of 687 people. The O'Chiese community has limited employment opportunities within the reserve community. Members often seek employment off the reserve.

In 1998, under the National Child Benefit, the O'Chiese First Nation initiated the customized *Early Childhood Development Program*, in conjunction with Red Deer College. It is designed to educate participants using a holistic approach to early childhood development and has led to the establishment of a day care centre at the O'Chiese First Nation.

The goals are to enhance parental skills and to qualify participants for college programs or for employment at the O'Chiese Day Care Centre. The program involves an early childhood development course offered at a daycare facility where 10 participants are presented with practical situations for an integrated and sustainable learning experience. They also learn and are able to practise day care licensing policies and procedures. An instructor from Red Deer College was hired for the first year to provide the training. She is the administrator for the O'Chiese day care and provides hands-on training within the day care.

The program aims to establish community networks with other potential work placements and to implement an evaluative system to measure the program's effectiveness in addressing needs. As the training progresses, the long-term goal is to implement a home-based Aboriginal Head Start-type program as well as other parental programs.

Eagle's Nest Day Care Centre,
O'Chiese First Nation, Alberta

OPASKWAYAK CREE NATION (OCN), MANITOBA

Situated on the shores of the Saskatchewan River approximately 620 km north of Winnipeg, OCN is continually creating new and innovative ways to serve its members. Utilizing a combination of reinvestment funds and existing band resources, OCN has implemented a variety of reinvestment programs, including the *Breakfast for Kids Program*, *Children's Clothing Program*, *High School Summer School Program*, *College Preparation Program* and the *High School Child Care Centre Subsidy Program*. These programs focus on the development of youth through education and work skills programs.

The *Early Childhood Development Program* is available to low-income parents who have experienced difficulties in sustaining long-term employment. At the end of the first year of the program, 90 percent of the participants were employed while the other 10 percent were attending college full time. Peripheral achievements included overwhelming community support and heightened self-esteem for the participants and their families.

This *Early Childhood Development Program* reinforces the community's future. It is part of an ongoing cycle of empowerment designed by the community. All the community's programs are interconnected and interdependent of each other.

The *Early Child Development Program* has become a catalyst for community development and program planning.

EMPLOYMENT/TRAINING

KANESATAKE FIRST NATION, QUEBEC MEN'S MENTOR PROGRAM

Under the National Child Benefit initiative, the community of Kanesatake undertook the *Men's Mentor Program*, designed to provide work-related experience on a part-time basis to men with families to assist them in finding permanent employment. There are five participants in the program hired for a variety of community tasks, for example, the general maintenance of community sites.

The relationship that has developed between the employees and the full time co-ordinator has proven to be positive. The employees enjoy the program and work with the co-ordinator to ensure its success, not only for themselves and their family but for the community as a whole.

We would like to keep on working because there is a lot to do [within the community] in the winter time. - Derek, an employee.

OTHER

CARRY THE KETTLE FIRST NATION, SASKATCHEWAN EMERGENCY FAMILY SUPPORT PROGRAM

In the community of Carry the Kettle, located near Regina, Saskatchewan, the high suicide rate was dealt with through a program that provided emergency family support. The program was developed to assist one family within the community that had been greatly affected by this issue.

In this particular instance, four children were left without a legal guardian. The community, having the desire and the capacity to intervene on the children's behalf, provided financial assistance, food and emotional support until such time as their situation could be resolved by Family Services.

As a result, the issues of family violence and suicide were dealt with in a variety of ways. For example, multi-family counselling services were made available to the community at large. Using National Child Benefit funds, the community hired four individuals to develop activities that support families that have experienced suicide and family violence. These activities ranged from individual family counselling to activities for children of all ages and youth programs.

Men's Mentor Program,
Kanesatake First Nation, Quebec

In addition, NCB funds were used to hire a liaison to address the community's concern for youth returning to the reserve from the Youth Rehabilitation Centre. The liaison arranged meetings and provided the necessary support for the youth and families to assist them with re-orientation to the community.

The *Emergency Family Support Program* was a benefit to the entire community and as such, continues to be funded under the National Child Benefit reinvestment component.

KANESATAKE FIRST NATION, QUEBEC DRESSED FOR WINTER PROGRAM

Kanesatake is located on the north shore of the Ottawa River, west of Montréal. There are about 1,285 registered members living on the reserve and 602 living outside of the reserve but within the area. To meet the growing need for sufficient clothing for children during the winter months, the community established the *Dressed for Winter Program* in 1998.

The program provides parents with the means to obtain adequate winter clothing for their children. Each participating family received a gift certificate for approximately \$225 per child, to purchase boots, a snowsuit, hat, gloves and scarf. In its first year, an age limit (infant to 12 years of age) was set.

The program was later expanded to include children up to the age of 17. With this expanded limit, the allowance was readjusted to \$140 per child. The items purchased were then distributed to the community members at the annual Christmas banquet.

This program also benefits children in future years, given that many families in the community consist of four or more people with more than one child. Therefore, winter clothing can be passed along from older children to younger siblings. To supplement the program, a regular clothing drive may be held to ensure there is enough clothing for all eligible children in the community.

SKOOKUM JIM FRIENDSHIP CENTRE, WHITEHORSE, YUKON YOUTH DEVELOPMENT PROGRAMS

The National Child Benefit reinvestment program provided funds for program service delivery to the Skookum Jim Friendship Centre for three specific programs: work-life job skills 2000, drum making and traditional songs, and youth empowerment. The needs to address the lack of cultural programs and organized activities and teachings were determined through citizen feedback. The three program areas involved a select group of youth, 10 years of age and older, including young teenage mothers.

SAMSON CREE NATION, ALBERTA

Located South of Edmonton in Alberta, has implemented the *Healthy Families Project*, a voluntary intensive home-visiting program to assist families with the preparation, and care of, newborns. The goal is to provide positive parenting and healthy child development skills, thereby improving the outcomes for children. The project works with families to identify their strengths and supports them in accessing existing services within the community. This initiative works to inform the mother-to-be about her pregnancy, to identify abuse or neglect, to develop different activities aimed at stimulating children after they are born and to develop a nutrition program.

Kwanlin Dun First Nation, Yukon Territory

Kwanlin Dun First Nation,
Yukon Territory

Worklife Job Skills 2000

The *Worklife Job Skills 2000* program provides pre-employment, computer and Internet skills training to youth suited to individualized learning. The program has a self-pacing model to ensure that individuals can maximize learning opportunities leading to employment, but at their own pace. This program led to the development and production of a facilitator's guide, complete with an electronic resource centre and a web site with e-programs.

Participants are encouraged to continue with occupational goals and objectives with active job searches. Each has the opportunity to increase self-confidence with the acquisition of new skills, such as drafting résumés and cover letters, and is actively encouraged to pursue employment opportunities.

Light of the North Drum Making Program

This program consists of delivering drum making and traditional songs to the youth and participants working with a mentor and an elder in eight workshops. The overall impacts of this program are youth empowerment and cultural enrichment, including acquiring traditional skills, and working in a team and with a cultural peer group. The youth were all highly motivated to learn more about their culture and identity, and to seek knowledge and understanding of others within the group from an oral history perspective.

Youth Self-Empowerment Program

This program involved working with families (both parents and youth) to increase awareness about the challenges facing young children in an urban environment. This was accomplished through sessions and family support consultations that build self-confidence, enable youth and families to be more assertive and deal with anger and aggression in family situations.

This program has had direct benefits for all the participants. Specifically, two youth have taken major steps toward sobriety and have assumed the responsibility to develop a more positive lifestyle free from addictive substances.

SQUAMISH FIRST NATION, BRITISH COLUMBIA AYATEWAY SQUAMISH NATION CULTURAL DEVELOPMENT CAMP

The name "Ayateway" comes from the Squamish language which is a dialect of the Coast Salish language family. It can be translated as "supporting one another, unity, teamwork." *The Ayateway Cultural Development Camp* has set a precedent in immersing children into the Squamish heritage. By focussing on fun, inclusive, diverse activities, the children have witnessed and participated in cultural activities that promote skills development, lifelong learning, hope and encouragement, and respect.

Culture is a way of life and recognizing the diverse needs of the community is important. Cultural integrity is an ongoing learning process which fosters a sense of belonging and develops self-esteem and confidence. The *Ayateway Cultural Development Camp* uses this focus to provide traditional Squamish activities that are designed to strengthen the pride and identity of each participant.

The Squamish concept of cultural development is a lifelong process; it takes time to comprehend the rich, diverse and distinct identity of the Squamish people. The camp provides an opportunity to emphasize the concept of rites of passage in pre-adolescence and on making healthy choices. The camp allows each participant to increase awareness in the following areas:

- All life is sacred and interconnected.
- A connection to Mother Earth is vital to our process of growth and healing.
- The traditional teachings of ancestors are vital for the well-being of the children, families and communities.
- Language, ceremonies, spirituality, history, values, art, songs/dances, stories and lifestyles are all part of the values that teach who you are and where you are from.
- Native values and teachings have great significance in the modern world in regard to global, environmental and social issues.
- Each individual is special and can provide significant contributions.
- Make a commitment to yourself to do your absolute best.
- Try to be supportive of one another and have fun.

The rich oral tradition of the *Skwxwumesh* has evolved in the territory of British Columbia for thousands of years. It is this evolution which enables children to possess a strong foundation, sense of belonging and identity. Participation in cultural activities provides a safe environment for *Skwxwumesh smenhems* (Squamish descendants), to explore their heritage and to develop a sense of pride, self-esteem, respect and confidence in themselves, their family and communities.

The Ayas Men cultural workers initiated the camp concept and further developed plans by hiring a co-ordinator, five assistants and an elder. By using strong role models and resource people, the children see healthy adults contributing to the betterment of the community. Twenty-five children, between grades 5 and 7, from upper Squamish communities and North Vancouver communities participated in this program.

LITTLE RED RIVER CREE NATION, ALBERTA

The Little Red River Cree Nation includes three remote communities in northern Alberta. Using the National Child Benefit reinvestment funds, the Nation was able to support and develop four programs, including a hot lunch program at the three community schools, supplementing the Head Start Program, and developing a clothing program. In addition, the community implemented a recreation program to build self-esteem and team participation skills in the youth of the community. The program made it possible for children to participate in various activities by providing necessary safe equipment in a safe facility in which to play.

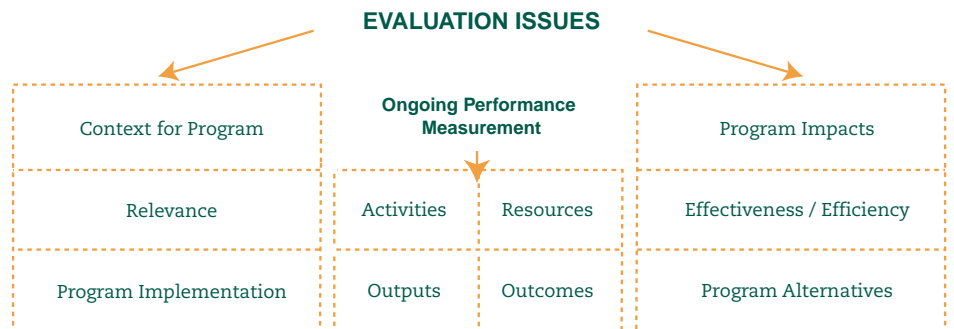

Ongoing monitoring and periodic evaluation of the National Child Benefit reflects the need for the program to meet departmental and Treasury Board accountability requirements. As well as for First Nations to have access to information to determine program performance. As the National Child Benefit reinvestment is administered separately from the federal-provincial-territorial program, a separate evaluation framework was developed to monitor and evaluate the First Nations National Child Benefit reinvestment component.

The approach taken in the evaluation process emphasizes a working relationship between INAC and First Nations. First Nations participation in the evaluation process includes working together with the Assembly of First Nations; First Nations members participating on the First Nations National Child Benefit Evaluation Working Group; First Nations communities developing projects that reflect their priorities and how they measure "success" through self-evaluation workshops; First Nations self-evaluations of their reinvestment projects; and First Nation members conducting interviews and facilitating dialogue circles for the interim and final evaluations.

THE EVALUATION AND ACCOUNTABILITY FRAMEWORK

The evaluation framework for the NCB for First Nations is made up of both ongoing performance measures and evaluation issues:

TYPES OF OUTCOMES INDICATORS

- Short-term outcomes include:
- improved day care facilities
 - increased school attendance
 - increased level of support for parents

- Medium-term outcomes include:
- improved child well-being
 - improved parenting/life skills
 - increased employment opportunities

- Long-term outcomes include:
- reduction in the depth of child poverty
 - increased attachment to the labour market for First Nations

Performance measurement is the ongoing process of measuring how well a particular program is achieving its goals. Ongoing performance measures serve community, regional and departmental needs for continuous data about program activities, outputs and outcomes.

Evaluation issues provide information about program rationale, objective achievement, impacts and effects, and program alternatives. Evaluation indicators are derived from evaluation issues and questions, and are intended to complement ongoing performance measures.

MONITORING AND EVALUATION ACTIVITIES

Information on the effectiveness of the National Child Benefit will be derived from four primary sources:

Ongoing monitoring - a continuous activity to provide information on program activities and outcomes;

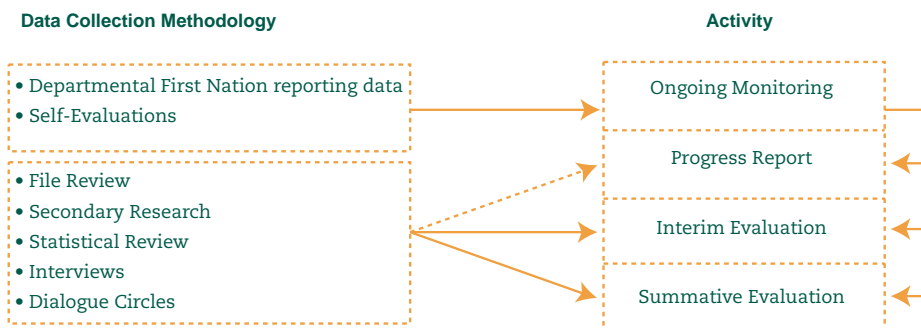

First Nations Progress Report - produced annually to share information with First Nation communities and the general public on the progress of the National Child Benefit;

Interim evaluation - to be completed May 31, 2001 to assess how well the program has been implemented, satisfaction with the program among participants and the short-term impacts; and

Summative evaluation - to be completed March 31, 2003 to assess the effectiveness and impacts of the program and to contribute to future policy recommendations.

The following table summarizes which data collection methodology corresponds to each activity. These common data collection methodologies for program evaluation are combined with culturally appropriate methods, such as dialogue circles and self-evaluations:

DATA COLLECTION METHODOLOGY BY MONITORING AND EVALUATION ACTIVITIES

These programs are...like seed money and we're not too sure where its going to go, but I know one thing for sure, that without it we won't see them [children] blossom.

- Chief Victor York, Lower Nicola First Nation

THE SELF-EVALUATION PROCESS

Self-evaluations enable communities to evaluate their own projects using their own success criteria. The benefit of self-evaluations is that they measure the ongoing impact of the programs. They can also be used as a governance tool within communities and provide feedback into the policy process at INAC.

A process and guide for self-evaluating NCB reinvestment projects within First Nations communities was developed in 1999. This was presented in self-evaluation workshops with 18 participating First Nations communities representing all regions (except the Atlantic) in March 2000. In September 2000, all participating First Nations came together in Wanuskewin Heritage Park, Saskatchewan to feed into the self-evaluation process - what worked what didn't.

In order to ensure ongoing First Nations feedback on the implementation of the NCB reinvestment component, in future years, the self-evaluation process will feed into the overall reporting procedure for the National Child Benefit. It is anticipated that the process will be implemented as a type of "rolling" evaluation, whereby First Nations from each region will be selected at different intervals to undertake a self-evaluation, use the information at the community level and submit the report to the Department to be included in the annual First Nations Progress Report.

The following First Nations communities contributed to the self-evaluation process during the last year:

OPASKWAYAK CREE NATION (OCN), MANITOBA

The OCN has established a number of programs to encourage youth in their educational endeavours. By developing work-related skills in dependent children of families on social assistance, the *High School Summer Student Program* provides summer work experience to children between the ages of 14 and 17 attending or returning to high school. Providing financial sponsorship and incentives, the *College Preparation Program* offers formal training opportunities to families with children seeking to upgrade their skills before entering post-secondary institutions.

LIARD FIRST NATION, YUKON

To address the lack of Kaska history in school text books, the *Elder Teachers in Elementary School Program* was initiated to provide a level of cultural awareness with the children and to bridge the gap between parents and the school system. The program brought an elder into the classroom to teach the children history and crafts and to become a positive role model. The children in the community look forward to the elder's teachings, and the community is looking to continue the program.

TSARTLIP FIRST NATION, BRITISH COLUMBIA

The development of the *Sen'cōten Language Program* addressed the importance of reinforcing the Sen'cōten culture. There are approximately 5,000 Sen'cōten people living in Saanich First Nations, with only 70 people fluent in the language. Recently, there has been a resurgence of pride in the culture and a desire to speak the language again. The program was developed and offered to all surrounding communities and has provided an opportunity for community members to achieve a new awareness of the Sen'cōten culture.

CARCROSS/TAGISH FIRST NATION, YUKON

The community used its National Child Benefit reinvestment funds to assist families with child care costs and to provide supplemental services to ensure quality care is provided. Services included the hiring of additional staff to improve the staff-to-child ratios for all age groups. The existing ratios are four infants, or six toddlers or six preschool age or eight school-aged children to one adult. The increased staff provides an increase in available services for children in a structured setting to prepare them for their entry into kindergarten.

KWANLIN DUN FIRST NATION, YUKON

Using reinvestment funds, the community set out to develop and implement seasonal recreational programming for the children and youth of Kwanlin Dun that were community-based and community driven. These programs were to be affordable, accessible to everyone, and culturally appropriate to the families within the community. This program was part of a larger strategy to support a community-based recreation council and to support opportunities for recreation and leadership training for youth and adults with children in the community. Resulting activities include a youth drop-in centre, an alternative kindergarten program, a summer recreation and youth leadership project, and other generally seasonally based recreational activities (e.g., education, cultural, community development).

TIMISKAMING FIRST NATION, QUEBEC

Reinvestment strategies for this community include *Youth Social Dinners*, *Social and Vocational Training*, *Pidaban Child Care Centre* and *Life-skills* and *Language* activities. Each program was implemented to address a specific need within the community. For example, a large number of parents involved with training initiatives or going back to school led to a need for quality child care services. This resulted in the establishment of the *Pidaban Child Care Centre*. Another example of how the community used its reinvestment funds is through the development of life skills and language enrichment activities, to address a lack of stimulation in language development and early learning experiences. This program involves teachers using the parents in the assessment process to inform them of the individual education plan for the child at school. It also provides parents with the tools they need at home to assist their children in speech and language development.

ABITIBIWINNI FIRST NATION, QUEBEC

To enable children of low-income families to benefit from extracurricular activities, the community developed an art program that taught children new skills in painting. This program involved 35 children, who after its completion, showcased their works for parents and other community members in their own forum. The children also received a certificate of achievement for their accomplishments. In order to gauge the satisfaction of the participants and their parents, a survey was conducted. The results from this survey will impact on how the course is developed for the following year. This program was considered to be a success based on the positive responses from those who participated in the program and from those who attended the art show.

STURGEON LAKE FIRST NATION, ALBERTA

The Sturgeon Lake First Nation implemented four programs using National Child Benefit reinvestment funds including a hot lunch program at the local school and a recreation program that focussed on participation in minor hockey. NCB funds were also used to support the local training facility and single parents.

SADDLE LAKE FIRST NATION, ALBERTA

The Saddle Lake First Nation developed several programs which supported employment opportunities for social assistance recipients with children. For example, some members of the community received training and were subsequently hired in the fields of security, social development, communications (Osakdo Radio), water trucking services and home improvement. Other training opportunities, in the form of apprenticeships, were provided for carpentry, plumbing and electrical trades. These training opportunities built on the existing community's *Capital Housing Program*, which provides housing units for members living on-reserve. In addition to focussing on training and employment opportunities, the community developed and supported a Christmas hamper program and a local food bank, and provided recreation programs for children and youth (e.g., hockey, swimming, out-door wilderness, etc.).

MOHAWK COUNCIL OF AKWESASNE, ONTARIO

Developed a program to address a specific group within the community that council members feel is under represented, young males with children, aged 18 to 24. The program is known as *Nuts and Bolts* and seeks to motivate participants to become involved in a variety of trades. Academic activities, ranging from computer skills and mathematics to English courses, are provided in the mornings, while the afternoons are spent working at various trades (e.g., auto care, electrical training, welding and woodworking). In each session participants learn how to use the tools of the trade and job safety techniques. The program has given participants the opportunity to improve academic skills including, in some cases, basic literacy skills, while also allowing them to gain work-related expertise.

Although early in the history of the National Child Benefit initiative, the stories contained in this Progress Report illustrate how the National Child Benefit reinvestment is having a positive impact on children. As the medium- and long-term effects begin to emerge through the evaluation of the initiative, it will become possible to measure the impact of the program.

W

hat is known at this point is that the reinvestment programs the National Child Benefit program supports significantly affect First Nations children, families and communities. The programs and activities represent a wide range of areas relating to children and families, and each has been designed with a specific purpose that corresponds with the needs and priorities of First Nations. The beneficiaries of these programs are primarily First Nations members on social assistance who, as a result of this initiative, have access to programs and services for themselves and their children, so they need not choose between employment and benefits for their children. As a result of the National Child Benefit reinvestment component, recipients of social assistance maintained their levels of income while having access to additional community-based programs geared to children and making links to the labour market.

As part of the broader federal-provincial-territorial process, First Nations contribute the lessons they have learned from delivering the reinvestment programs of the National Child Benefit and provide information on the impact the program has had on their communities through a separate but co-ordinated evaluation process. Future progress reports will document the progress made in assessing the long-term impacts of the National Child Benefit on the lives of First Nations children and their families.

CHIPPEWAS OF KETTLE AND STONY POINT FIRST NATION, ONTARIO

Nutritionists have said that breakfast is an important part of a child's development and learning ability at school. *The Kettle Point School Breakfast and Lunch Program*, which involves approximately 150 children, has resulted in great improvement in the participating children. More children are arriving on time and have marked improvement in their overall attitude. Based on the success of the program, the community is looking into the feasibility of providing light lunches for the children. This program has created vital links between the child, the school and the parents.

Acknowledgment of challenges faced and external factors are important to include in any assessment of the National Child Benefit. For example, the relative isolation of many First Nations communities constrains economic opportunities. For this reason it is important that policies aim to improve income security within the community and provide additional opportunities.

These lessons can be achieved by working in partnership with First Nations communities. This ensures that steps can be taken toward improving the health and social outcomes and public safety of First Nations children. This partnership also makes possible the development of appropriate solutions to address the specific and pressing needs of First Nations children.

I think it's important that when we, in the community, create programs that it comes from the community, that way everyone can take ownership of it and it is more successful that way.

- Linda George, Supervisor Child and Family Services Program,
Squamish First Nation

The following outlines the next steps pertaining to the implementation of the NCB reinvestment component:

- Release of British Columbia NCB Progress Report
Winter 2001
- Release of the First Nation NCB Reinvestment Video; "Seeing the Possibilities, Making a Difference", poster and web site
Spring 2001
- Release of federal-provincial-territorial NCB Progress Report: 2000
Spring 2001
- Next Round of NCB Self-evaluation Workshops
Spring 2001
- First Nation NCB Interim Evaluation
May 2001
- First Nation NCB Progress Report: 2001
Spring 2002
- First Nation Summative Evaluation
March 2003

As a parent, I believe that the National Child Benefit is an ideal program. The positive influences the services contribute will have lasting effects on generations to come. The National Child Benefit is making a difference.

- Adam Beach, First Nation Actor

I'm very grateful that there is a program here for the children because I wanted to join a program and without the day care facilities I would have had to put it off again.

- Willette, Parent, Sto:Lo First Nation

SASKATCHEWAN

The *Saskatchewan Child Benefit* (SCB) is a payment to low-income parents to help with the costs of raising a child. The program replaced the welfare portion for children with a new child benefit directed to all low-income families whether they are low wage earners or social assistance recipients. The program is integrated with the Canada Child Tax Benefit and the benefits are combined with the National Child Benefit Supplement into a single monthly payment to reduce duplication and to simplify administration. This new provincial benefit is also delivered to First Nations families living on reserve.

The *Saskatchewan Employment Supplement* (SES), delivered provincially, was not to be delivered on-reserve; however First Nations in consultation with INAC will design and deliver a comparable program for First Nation families living on-reserve.

The *Family Health Benefits Program* provides extended health benefits to low-income families with children. A full range of benefits is provided for children and partial benefits for adults. With this program, low-income families are assured of retaining health benefits when they leave social assistance for work opportunities.

In their first year of operation, Saskatchewan's programs benefited approximately 40 percent of the province's children, or 100,000 children in 50,000 families. This includes *Saskatchewan Child Benefit* payments received by 8,800 First Nations families living on-reserve.

- On-reserve	8,800	22,200
Saskatchewan Employment Supplement	5,150	12,700
Family Health Benefits	22,670	42,810

YUKON

The *Children's Drug and Optical Program* was designed to assist low-income families with the cost of prescription drugs and eye care for children up to 18 years of age. Families must pay a deductible based on income and the number of family members. There is no deductible for low-income families. Benefits include prescription drugs, some medical supplies, eye examinations and glasses.

The Yukon government has estimated that approximately 291 children benefited from this program during 1998-1999. Approximately 333 children were estimated to benefit during 1999-2000, and 350 children will benefit in 2000-2001.

The above initiatives were put in place to support the territorial government's *Antipoverty Strategy* and its emphasis on supporting healthy children, families and communities, and in recognizing the long-term benefits of early childhood interventions. They also represent an integration of health and social services programming.

Yukon's National Child Benefit Initiatives	Estimated Territorial Investment Funds 1998-1999		
	1998-1999 Actual	1999-2000 Estimated	2000-2001 Estimated
Yukon Child Benefit	N/A	\$ 328,000	\$ 328,000
Children's Drug and Optical	N/A	\$ 42,000	\$ 62,000
Children's Recreation	N/A	\$ 3,000	\$ 3,000
Healthy Families*	\$ 180,000	\$ 73,000	\$ 253,000

*When Healthy Families began in 1999-2000, it fell under an existing program, *Family Support Worker Program*, to develop it. This explains the low expenditure in its first year. In the second year, salary dollars were moved from Family Support to Healthy Families and new money was added. Additional funds will be made available in 2000-2001.

Actual Number of Families and Children Benefiting under National Child Benefit Initiatives by Program Name in 1999-2000

National Child Benefit Initiatives by Program Name	Estimated Number of Families Benefiting	Estimated Number of Children Benefiting
Yukon Child Benefit	1,357	2,500
Children's Drug and Optical	-	333
Food for Learning	-	250
Children's Recreation	180	335
Healthy Families	22	39
