

## 2006 Census Housing Series: Issue 8—Households in Core Housing Need and Spending at Least 50% of Their Income on Shelter

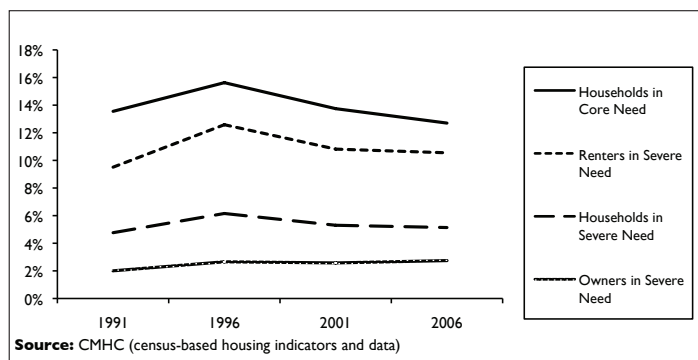

### INTRODUCTION

This *Research Highlight* examines the group of households in core housing need in 2006 that spent 50% or more of their income on shelter. Throughout this Research Highlight, such households are referred to as being “in severe housing need”. See the text box for definitions of Acceptable Housing and Core Housing Need.

### FINDINGS

#### 5.1% of households experienced severe housing need in 2006

The percentage of households in severe housing need decreased from 5.3% in 2001 to 5.1% in 2006 (see Figure 1). The number of households in severe housing need increased from 573,000 in 2001 to 604,510 in 2006. Households in severe housing need accounted for about 40% of the 1.5 million households in core housing need in 2006 (see Table 1).

**Figure 1** Incidence of Core Housing Need and Severe Housing Need - Canada, 1991 - 2006

### Acceptable Housing and Core Housing Need

The term **acceptable housing** refers to housing that is adequate in condition, suitable in size, and affordable.

- **Adequate** housing does not require any major repairs, according to residents.
- **Suitable** housing has enough bedrooms for the size and make-up of resident households, according to National Occupancy Standard (NOS) requirements. Enough bedrooms based on NOS requirements means one bedroom for each cohabiting adult couple; unattached household member 18 years of age and over; same-sex pair of children under age 18; and additional boy or girl in the family, unless there are two opposite sex children under 5 years of age, in which case they are expected to share a bedroom. A household of one individual can occupy a bachelor unit (i.e., a unit with no bedroom).
- **Affordable** housing costs less than 30 per cent of before-tax household income. For renters, shelter costs include rent and any payments for electricity, fuel, water and other municipal services. For owners, shelter costs include mortgage payments (principal and interest), property taxes, and any condominium fees, along with payments for electricity, fuel, water and other municipal services.

A household is in **core housing need** if its housing does not meet one or more of the adequacy, suitability or affordability standards and it would have to spend 30 per cent or more of its before-tax income to pay the median rent of alternative local market housing that meets all three standards.

Provincial/territorial results varied, from Quebec which experienced the greatest decline (0.6 percentage points) in the incidence of severe housing need, to Ontario where the incidence increased by 0.3 percentage points (see Appendix Table 1).

**Renters were more likely than owners to experience severe housing need**

In 2006, the incidence of renter households in severe housing need, at 10.5%, was well above that for owners, at 2.7% (see Table 1). While renters accounted for 31% of all households in Canada, they comprised 63% of households in severe housing need in 2006. Of the 223,900 owner households experiencing severe housing need in 2006, the majority were paying mortgages.<sup>1</sup>

**Among both renters and owners, low incomes are the main reason for experiencing severe housing need**

Previous studies<sup>2</sup> have shown that households in core housing need have significantly lower incomes than other households and that affordability is the most common reason for households to fall into core housing need.

**Table 1** Households by Severity of Core Housing Need, Canada, 2006

	All Households (#)	Households in Core Housing Need		Households in Severe Housing Need		
		(#)	(%)	(#)	(% of all Hhlds)	(% of Hhlds in core need)
All Households	11,766,145	1,494,395	12.7	604,510	5.1	40.5
Owners	8,158,120	512,640	6.3	223,900	2.7	43.7
With mortgages	4,678,925	302,880	6.5	178,725	3.8	59.0
Without mortgages	3,479,195	209,755	6.0	45,170	1.3	21.5
Renters	3,608,025	981,755	27.2	380,615	10.5	38.8

**Notes:**  
Numbers may not add due to rounding.  
**Source:** CMHC (census-based indicators and data)

The income disparity is even greater for households in severe housing need. In 2006, Canadian households in general reported an average income of \$72,391 compared to \$19,968 for households in core housing need, and \$16,757 for households experiencing severe housing need (see Table 2).

**Table 2** Average Household Income, Shelter Cost and Shelter Cost-to-Income Ratio (STIR) - Canada, 2006

	All Households			Households in Core Housing Need			Households experiencing severe housing need		
	Average Annual Income (\$)	Average Monthly Shelter Cost (\$)	Average STIR (%)	Average Annual Income (\$)	Average Monthly Shelter Cost (\$)	Average STIR (%)	Average Annual Income (\$)	Average Monthly Shelter Cost (\$)	Average STIR (%)
Total	72,391	905	21.8	19,968	756	48.7	16,757	927	67.6
Owners	85,857	983	18.7	22,789	909	49.7	21,347	1,207	69.2
With mortgage	87,982	1,375	24.0	26,781	1,209	57.2	23,966	1,363	69.9
Without mortgage	83,000	455	11.6	17,025	476	38.9	10,984	591	66.7
Renters	41,943	725	28.9	18,496	675	48.2	14,057	762	66.7

**Notes:**  
The average Shelter Cost-to-Income Ratio (STIR) reflects the average of individual household STIRs, and is not calculated using the overall averages of incomes and shelter costs.  
**Source:** CMHC (census-based housing indicators and data)

<sup>1</sup> Since standard mortgage lending criteria preclude a household from spending 50% of their income on shelter costs, these households would have had a higher household income at the time the mortgage was obtained. Household transitions, such as loss of employment or family dissolution, can leave households in a more difficult position to access acceptable housing. Alternatively, since income data collected by the 2006 census was for 2005, some of these households may have had an increase in income between 2005 and 2006 and taken out a mortgage in early 2006.

<sup>2</sup> See CMHC's Socio-Economic Series of Research Highlights on 2001 and 2006 Census-based Housing conditions and the 2009 Canadian Housing Observer Chapter 7 (www.cmhc.ca) for further details

In 2006, 22.7% of households in the lowest income quintile (incomes of \$27,607 or less) experienced severe housing need (see Appendix Table 2). About 2.8% of households in the moderate income quintile and 0.2% of the middle income quintile were in severe housing need.

Households in severe housing need in 2006 reported an annual income that was about 23% the average for all households (\$16,757 versus \$72,391), yet their average monthly shelter costs were slightly higher (\$927 versus \$905). As a result, households in severe housing need devoted 68% of their income to shelter, compared to 22% for all households in Canada (see Table 2).

Owners with mortgages who were in severe housing need had shelter costs similar to those of all owners with mortgages (\$1,363 compared to \$1,375). However the owners with mortgages who were in severe housing need had an average income of \$23,966, versus \$87,982 for all owners with mortgages (see Table 2), resulting in a STIR of almost 70% compared to 24%.

Owners without mortgages that were in severe housing need had higher shelter costs than did owners without mortgages overall (\$591 compared to \$455), and much lower incomes (\$10,984 compared to \$83,000). Renters in severe housing need also had monthly shelter costs that were higher than did all renters (\$762 compared to \$725) and much lower incomes (\$14,057 compared to \$41,943). Both owners without mortgages in severe need and renters in severe need were, on average, spending about 67% of their income on shelter.

### Severe housing affordability need leaves little income for other household expenses

With shelter costs consuming such a large share of their before-tax income, households in severe housing need had little income remaining after paying shelter costs -- \$5,633, on average in 2006 (see Figure 2). In comparison, Canadian households in general had \$61,531 in before-tax income remaining after accounting for shelter costs.

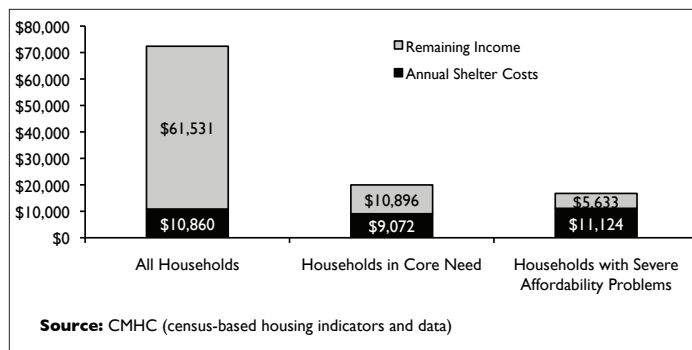

Figure 2 Annual Shelter Costs and Remaining Before-Tax Household Income - Canada, 2006

### Severe housing need by household group

#### More frequent among households with a younger household maintainer

Compared to other age groups, households with young primary maintainers (between the ages of 15 and 29) were most likely to be in severe housing need (see Appendix Table 2). In 2006, 6.8% of all households with a primary maintainer in this age group experienced severe housing need, compared to 4.4% of senior-led households.

Among renter households in 2006, however, the incidence of severe housing need was highest, at 12.5%, for households with a primary maintainer in the 45-64 age group (see Appendix Table 2).

#### Risk of severe housing need greater for lone parent and non-family households

In 2006, 9.2% of each of lone parent households and non-family households were in severe housing need, significantly higher than the 2.4% each of couples and multiple-family households (see Appendix Table 2).

**Greater prevalence among non-reserve Aboriginal households than non-Aboriginal households**

A higher proportion of Aboriginal households living outside of reserves were in severe housing need (at 6.7%) than non-Aboriginal households (at 5.1%) (see Appendix Table 2). Non-reserve Aboriginal households in severe housing need in 2006 had an average income of \$14,499 compared to \$16,862 for non-Aboriginal households in severe housing need.

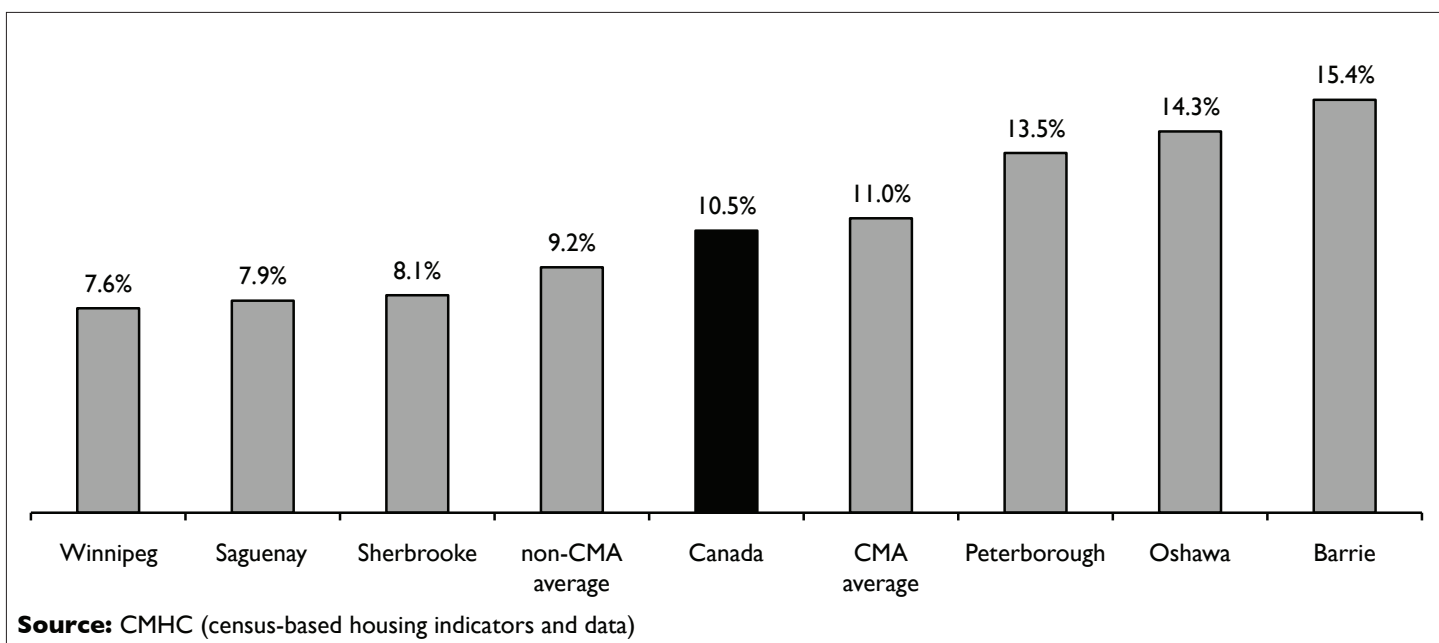

Among the 401,145 Aboriginal households living outside of reserves assessed for core housing need in 2006, Status Indian households had the highest incidence of severe housing need (at 8.2%). Inuit households had the lowest incidence (at 4.4%) (see Appendix Table 2).

**More commonly experienced by recent immigrants**

Among households whose primary maintainer immigrated to Canada between January, 2001 and May 16, 2006 (Census Day), 14.9% lived in severe housing need (see Appendix Table 2). By comparison, households whose maintainer had immigrated prior to 1981 had an incidence of severe housing need of 4.8%, and 4.4% of households with a non-immigrant primary maintainer were in severe housing need.

**Higher incidence for households with an unemployed primary maintainer**

Severe housing need among households with an unemployed primary maintainer (at 11.6%) was higher in 2006 than households with a primary maintainer that was employed full time (at 3.1%) or part time (7.8%) (see Appendix Table 2). Among households whose primary maintainers were not in the labour force, 7.7% were in severe housing need.

**Figure 3** Percentage of Renter Households in Core Housing Need and Spending 50% or more of their Income on Shelter - 2006

### More likely encountered among households with government transfers payments, least common for households with retirement incomes

In 2006, households whose major source of income was government transfer payments were more likely to experience severe housing need, at 14.9%, than those relying primarily on other sources of income (see Appendix Table 2). The incidence of severe housing need for households with wages and salaries as the major source of income was 2.3%.

Households with retirement incomes as their major source of income had an incidence of severe housing need of 0.6%, mostly due to these households having paid off their mortgages (only 18% owned homes with a mortgage, compared to 40% of all households).

### Among Census Metropolitan Areas, renter households in Barrie had the highest incidence of severe housing need and Winnipeg the lowest.

Among renter households in Census Metropolitan Areas (CMAs) in 2006, Barrie (at 15.4%) reported the highest incidence of severe housing need and Winnipeg (at 7.6%) the lowest (see Figure 2 and Appendix Table 3). The CMA average, at 11.0% was higher than the non-CMA average at 9.2%.

## SUMMARY

Households in severe housing need – in core housing need and spending 50% or more of their income on shelter – accounted for 5.1% of all Canadian households in 2006. This is a lower percentage than in 2001 (at 5.3%). While the percentage of households in this situation decreased, the number of these households increased from 573,000 in 2001 to 604,510 in 2006.

Households with lower average incomes remain particularly susceptible to being in severe housing need. These households include those whose maintainer is a recent immigrant, unemployed, or aged 15 to 29 years; renters; non-reserve Status Indian households; lone-parent and non-family households; and households whose major source of income was government transfer payments.

### Housing Research at CMHC

Under Part IX of the *National Housing Act*, the Government of Canada provides funds to CMHC to conduct research into the social, economic and technical aspects of housing and related fields, and to undertake the publishing and distribution of the results of this research.

This fact sheet is one of a series intended to inform you of the nature and scope of CMHC's research.
