

# SENIORS' HOUSING REPORT

## British Columbia

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: 2011

## Highlights

- An increase in the number of seniors' housing units<sup>1</sup> pushed up the provincial average vacancy rate for independent living suites to 11.5 per cent in February 2011;
- Larger residential buildings, with one hundred or more units, were more common in larger urban centres such as the Lower Mainland region and the Vancouver Island/Central Coast regions than in the smaller regions of the province; and
- The majority of independent living suites in the Lower Mainland and Vancouver Island/Central Coast regions rented for \$2,400 or more per month.

30	Methodology
30	Definitions

<sup>1</sup> CMHC's survey considers the universe of seniors' housing units to include independent living suites that require on-site meal services, heavy care units located within seniors' complexes with independent living suites, respite beds, and subsidized units. Refer to the Definitions section at the end of the report for a more detail description of the types of seniors' housing that are surveyed.

# British Columbia Vacancy Rate of Independent Living Spaces and Total (Universe) Spaces

## Vacancy Rates

### Strong demand moderated vacancy rates

Average vacancy rates for British Columbia's independent living suites rose to 11.5 per cent in 2011, up from 10.4 per cent last year. Most provinces reported modest changes from year-earlier levels. Independent living suites, for the purposes of this survey, are found in complexes where the majority of the residents are aged 65 years or older, on-site meal services are provided, and the residents receive less than 1.5 hours of healthcare per day<sup>2</sup>. The supply of housing options available to B.C. seniors grew at a faster rate than the province's seniors' population during the past year, leaving some units vacant. Overall the demand for seniors' housing in the province remained strong as shown by an increase in the capture rate<sup>3</sup> of 0.5

Figure 2

\* Includes independent living spaces, heavy care units, respite beds, and subsidized units that meet the requirements of the Seniors' Survey as outlined in the Methodology section of the report.  
Source: CMHC

percentage points over year earlier levels and year-over-year growth of 0.7 per cent in the number of residents living in seniors' housing complexes (see Table 1.4).

### Vacancy rates moved higher throughout the province

Vacancy rates for independent living suites rose in each of the four regions surveyed. The increase in vacancy rates is attributed to the addition of 1,860 units of seniors' housing to the market since the last survey, providing seniors with more housing options. Nearly one quarter of these new units were located in each of the Vancouver Island/Central Coast and Okanagan/Thompson/Shuswap regions, while another 45 per cent of the units were in the Lower Mainland region. The remainder of the new units were built in the Other BC region, which is made up of the Northern BC and Kootenay regions. The mix of new units<sup>4</sup>

<sup>2</sup> CMHC's survey excludes independent living suites that do not provide on-site meal services.

<sup>3</sup> Capture rate is the share of British Columbia's population aged 75 or older living in seniors' housing of all types. This includes independent living suites, heavy care units, respite beds, and subsidized units.

<sup>4</sup> Units are considered new if they have been available to the seniors' market for at least a year but have not been available for more than two years.

	Vacancy Rates (%)			
	Standard Spaces*		Total	
	2011	2010	2011	2010
British Columbia	11.5	10.4	7.1	6.8
Alberta	12.8	12.2	10.4	9.8
Saskatchewan	4.1	6.2	3.6	4.6
Manitoba	7.1	7.9	6.7	7.3

Prince Edward Island	9.1	7.1	6.9	6.6
Newfoundland & Labrador	37.6	18.1	18.5	16.9
Canada	10.7	10.8	9.7	9.9

\* In B.C., standard spaces are referred to as independent living units.

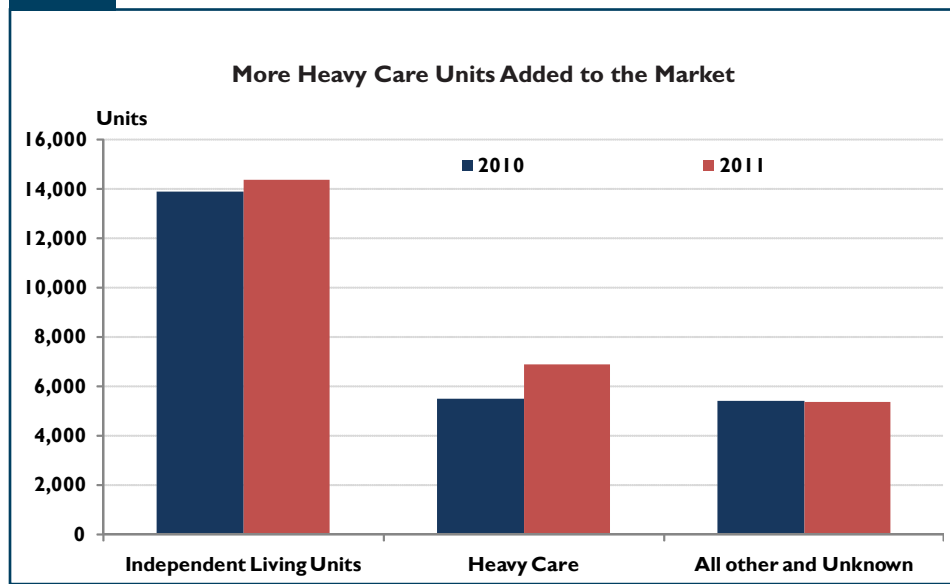

consisted of 502 independent living suites and 1,409 heavy care units. There were fewer respite beds and subsidized units compared to 2010 levels.

The Lower Mainland and Okanagan/Thompson/Shuswap regions posted modestly higher average vacancy rates for independent living units at 10.3 per cent and 11.9 per cent, respectively. The Vancouver Island/Central Coast region also reported an increase in the average vacancy rate for independent living suites to 12.3 per cent. The Other BC region reported the largest increase in vacancy rates, to 14.9 per cent in February from 5.0 per cent in February of last year.

## Vacancy rates varied regionally by bedroom types

Average vacancy rates for the province were fairly consistent across bedroom types. They ranged from 10.4 per cent for two bedroom units to 13.5 per cent for bachelor units. Although there was little variability within the provincial averages, there were regional differences in the vacancy rates across bedroom types. Average vacancy rates for larger independent living suites (one bedroom plus den and two bedroom units) varied from 1.7 per cent for one bedroom plus den units in the Okanagan/Thompson/Shuswap region to 14.1 per cent for one bedroom plus den units in the Lower Mainland Region. In contrast, smaller independent living suites (bachelor and one bedroom units) tend to have higher average vacancy rates. Vacancy rates for smaller suites ranged from 8.8 per cent for one bedroom units in

Figure 3

Source: CMHC

the Lower Mainland region to 21.3 per cent for bachelor units in the Other BC region.

## More seniors transitioning to heavy care units

The number of heavy care units<sup>5</sup> captured in this survey and available to B.C. seniors across the province grew by 25 per cent over year-earlier levels. The uptick in the number of heavy care units captured by this survey reflects both a strong demand for these types of units but also a shift towards integrating a variety of seniors' housing options within a single complex. This campus of care concept allows seniors to remain within one facility as the level of care required changes. Nearly three-quarters of all new heavy care units were in the Lower Mainland and Okanagan/Thompson/Shuswap regions. The average vacancy rate edged downwards to 12.1 per cent, from 12.8 per cent one year earlier. The only region to report an increase

in the average vacancy rate for heavy care units was the Okanagan/Thompson/Shuswap region.

## Seniors' Housing Universe

### Most suites located in the Lower Mainland region

Most seniors' housing units were located in the Lower Mainland region. These units include an assortment of independent living suites, heavy care units, respite beds and subsidized units. This region had the largest estimated population of seniors and accounted for 45 per cent of all surveyed seniors' housing units in the province.

Smaller units, including bachelor and one bedroom units, were the most common type of seniors' housing in every region of the province, making up 90 per cent of all units available to B.C.'s seniors' population. A similar

<sup>5</sup> Heavy care units included in this survey provide residents more than 1.5 hours of healthcare per day and must be located within a seniors' complex that has independent living suites.

trend was also observed with independent living suites. Almost two-thirds of all independent living suites were one bedroom units. As of February 2011, the province had 14,392 independent living suites located in seniors' housing complexes.

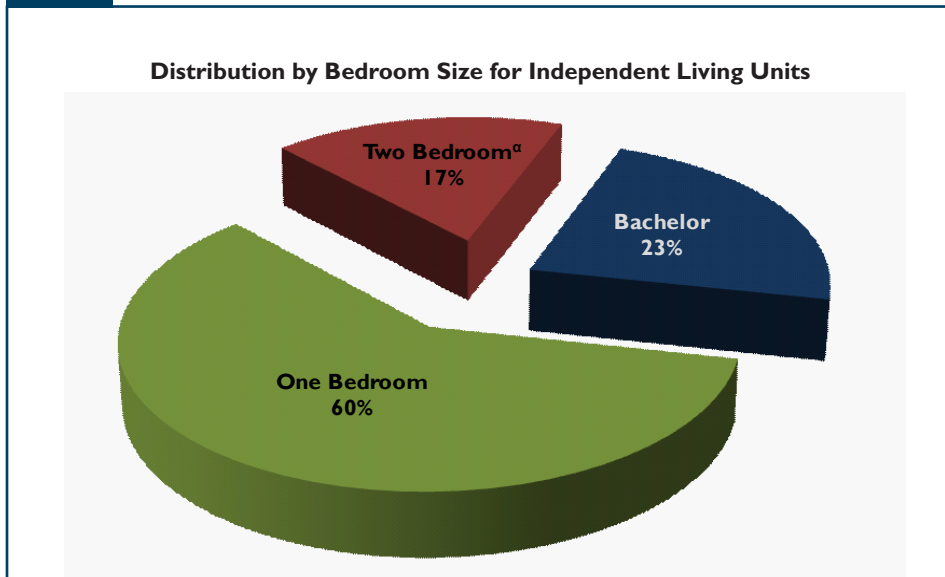

### Larger regions have larger seniors' complexes

The average number of seniors' units per complex varied regionally. The Lower Mainland region consisted primarily of larger complexes; nearly half of the region's seniors' housing complexes had more than 100 units each. The Vancouver Island/Central Coast and Okanagan/Thompson/Shuswap regions had a variety of different sized seniors' complexes. The median size of seniors' housing complexes in these regions was 65 units and 66 units, respectively. In contrast, smaller complexes containing less than 50 units each were more prevalent in the Other BC region.

### More seniors living in seniors' residences

Every region in the province reported an increase in the number of seniors living in seniors' housing units in February 2011 compared to one year ago. This is illustrated by the increase in the capture rate. The capture rate is the proportion of the population aged 75 years and over living in seniors' housing residences that have an option for independent living. During this time, the capture rate increased by 0.5 percentage points to 8.4 per cent. The Okanagan/

Figure 4

<sup>a</sup> Includes both one-bedroom and den, and two-bedroom units.

Source: CMHC

Figure 5

\* Independent living spaces

Source: CMHC

Thompson/Shuswap region continues to be the region with the highest capture rate at 12 per cent, followed closely by the Vancouver Island/

Central Coast region at 10.3 per cent. Nearly half of all of B.C.'s seniors' housing units are located in these two regions.

## Seniors' Housing Rents

### Larger centres had higher average rents

Rents for seniors' housing were generally higher in regions where land and housing prices were relatively higher. For example, the North/West Vancouver subarea of the Lower Mainland region is a higher priced neighbourhood in terms of land and existing home prices compared to the regional average. The average rent for an independent living suite in this area was \$4,155 per month. In contrast, the average rent in the North Okanagan subarea of the Okanagan/Thompson/Shuswap region was \$2,062 per month, which has lower relative land costs and existing home prices compared to the Lower Mainland. Overall, 60 per cent of all independent living suites in the province rented for more than \$2,400 per month.

### Higher rent units had lowest vacancy rates in larger centres

Independent living suites with higher rents tended to have lower vacancy rates throughout most of the province. The Lower Mainland region reported the lowest vacancy rates at 7.2 per cent for units where the rent was \$2,900 or more each month. This rent range encompasses more than 40 per cent of all units in the Lower Mainland region. The \$1,900 to \$2,399 rent range was the only category to show a significant increase in vacancy rates from year-earlier levels, increasing to 14.6 per cent from 10.5 per cent. This increase in average vacancy rates was driven by significantly higher vacancy rates in the Okanagan/Thompson/Shuswap and Other BC regions.

## Spotlight on...

### Seniors

The senior population continues to grow at a faster pace than the general population. According to the 2006 Census, there were 4.3 million seniors (people aged 65 years or older) living in Canada, up 11.4 per cent from 2001 levels. This relatively high growth of the senior population is projected to persist throughout the coming decades as the baby-boomer cohort moves through their retirement years. The first of the baby-boomer generation will enter the 65+ years old category in 2011.

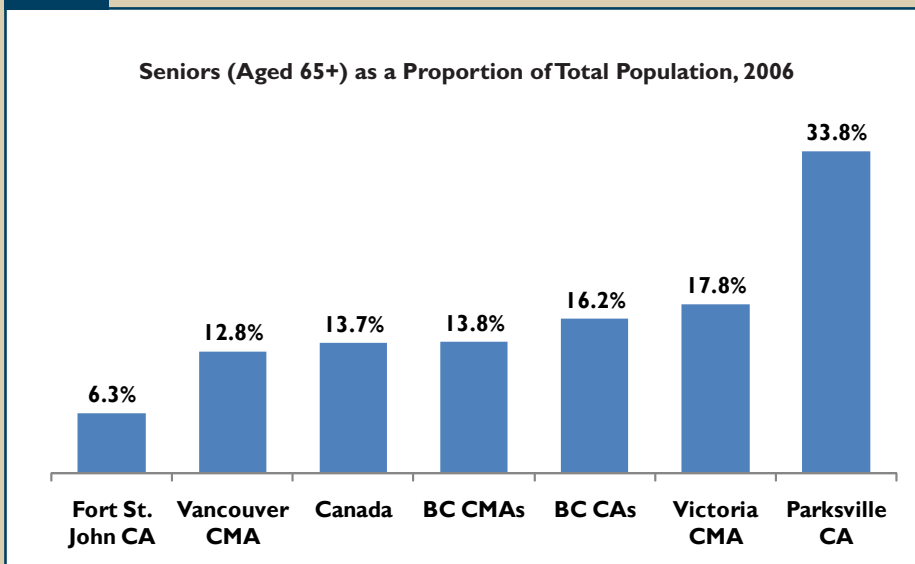

Smaller centres (Census Agglomerations<sup>1</sup> and areas with a population of less than 10,000) tend to have a higher proportion of seniors within their populations than do larger urban centres (Census Metropolitan Areas<sup>2</sup>) (see Figure 1). This may be explained by the attractiveness of smaller centres to retirees and the higher rate of migration to larger cities among non-seniors.

As seniors age, they become more likely to move out of their single-detached homes and to downsize, often to apartments. In 2006, one

quarter of people aged 65-74 lived in apartments, compared to more than one third of those aged 75+. Because many apartments in Canada are rental units, older homeowners who downsize sometimes decide to become renters after selling their home. Related to this was the Census result showing a lower rate of homeownership for people aged 75+ (67.9% vs. 76.1% for households with seniors aged 65-74).

For more information about seniors' housing conditions, see Canada Mortgage and Housing Corporation (2010): 2006 Census Housing Series: Issue 10 – The Housing Conditions of Canada's Seniors. Research Highlight. Socio-economic Series; 10-021

## Methodology

Canada Mortgage and Housing Corporation conducts the Seniors' Housing Survey in February and March. This annual survey became National in scope in 2009, covering all centres in each of the ten provinces. Both private and non-profit residences are included in the survey universe. Non-profit residences must have at least one unit that is not subsidized.

To be eligible for inclusion in the 2011 Survey results, a residence must:

- ✓ Have been in operation for at least one year, i.e. before January 2010
- ✓ Have at least 10 rental units (Quebec, Ontario, Prairies) or 5 rental units (Atlantic provinces and B.C).
- ✓ Offer an onsite meal plan
- ✓ Does not provide high levels of healthcare (defined as 1.5 hours or more of care per day) to all of their residents. Nursing homes and long-term care homes are examples of residences that were not included in the survey.
- ✓ Offer rental units. Life lease units and owner-occupied units are excluded from this survey.
- ✓ And at least 50% of resident's are 65 years of age or older

The Seniors' Housing Survey is a census and not a sample survey therefore all senior's residences in Canada meeting these criteria are included to be part of this survey.

Survey data were obtained through a combination of telephone interviews and fax and email responses. Information was obtained from the owner, manager, or residence administrator. Survey results reflect market conditions at the time of the survey. Survey results have been weighted to adjust for non-responses, to ensure that they are reflective of the universe. 2010 data in this publication may differ from what was published last year, due to survey zone changes in 2011. The level of statistical reliability is noted in the data tables. For more information on the reliability of the data please click [here](#).

All statistics published, excluding information on new market supply, include only those residences that have been in operation for at least one year.

## Definitions

**Space:** A space is a residential area that is rented out. Examples of spaces include: one-half of a semi-private unit, a private or bachelor unit, a one-bedroom unit and a two-bedroom unit. In most cases a space is the same as a unit. The exception is the case where a unit has been divided to rent to multiple residents. Semi-private and ward units are an example of this. Unless otherwise indicated, data for spaces are for all unit types.

**Standard Space:** A space occupied by a resident who does not receive a high level of care (i.e. the resident receives less than 1.5 hours of care per day.) Regional terms for this type of space vary across the country. In cases where there is no additional charge paid for a high level of care, the estimate of the number of standard spaces may include units where the resident receives a high level of care.

**Heavy Care Space:** A space where the residence provides 1.5 hours or more of healthcare per day to the resident. Examples include Alzheimer, Dementia and mobility support residents. Heavy care space estimates for occupied spaces may only include those where the resident is required to pay for a high level of care.

**Respite Space:** A space used to provide temporary accommodation for a senior who normally lives in another place and not at the residence.

**Non-market or Subsidy Space:** A space where the rent received for the unit is less than market rent or where the resident occupying the unit is subsidized.

**Rent:** Refers to the actual amount a resident pays per month for their accommodation space and all mandatory services. For vacant spaces, the rent is the amount the owner is asking for the space.

**Vacancy:** A space is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

**Capture Rate:** The main age group living in seniors' residences are persons aged 75 years and older. Capture rate in a centre is the ratio of the total number of residents living in the survey universe divided by its estimated 75+ population and then expressed as a percentage.

### **Acknowledgement**

The Seniors' Housing Survey could not have been conducted without the cooperation of the residence owners and their staff. CMHC acknowledges their time and assistance in providing accurate information. As a result of their contribution, CMHC is able to provide data and analysis that benefits the entire industry.

### **Confidentiality**

All information provide through this survey is kept strictly confidential and only used by CMHC to generate statistics and data sets that do not allow for the identification of individuals, households, businesses or buildings.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
