

# HOUSING NOW

## Kingston CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2011

### New Home Market

#### Total Housing Starts Up in the First Quarter

Kingston Census Metropolitan Area (CMA) total housing starts increased significantly between January and March 2011. At 280 units, total starts registered their highest first quarter level since 1988. The strong first quarter performance in total housing starts was predominantly due to expansion in rental apartment

construction. Meanwhile, single-detached housing starts, which are less volatile and therefore a better indicator of trend in construction activity, remained unchanged from the level recorded in the first three months of last year. Row starts registered four units this first quarter compared with no activity in the same period a year earlier.

On a sub-market basis, total housing starts were up in Kingston City and the South Frontenac Township. In the

Frontenac Islands, total construction activity remained unchanged while the Loyalist Township registered a year-over-year decline of 16 per cent in the first quarter. Between January and March 2011, Kingston City accounts for all apartment starts – a direct response to the low vacancy rate in the downtown area. According to the Fall-2010 CMHC Rental Market Survey, the downtown area (zone 1) posted the lowest average vacancy rate in Kingston.

### Highest Quarterly Apartment Starts in Five Years

After a weak performance in the fourth quarter of 2010, apartment construction increased to 190 units between January and March 2011. This first quarter growth marked the highest quarterly number of apartment starts since the third quarter of 2006. The low level of apartment completions in the second half of 2010 has limited the availability of rental accommodation in the Kingston CMA. Subsequently, this has prompted developers to increase the level of apartment construction this first quarter.

On the demand side, strong youth employment in recent months has encouraged more young adults to form individual households, which tends to put downward pressure on the average rental vacancy rate. As well, international migration to Kingston increased by about ten per cent in 2010, providing additional support for the rental market.

## Resale Market

### Existing Home Sales Down in the First Quarter

According to the Kingston & Area Real Estate Association (KREA), the first quarter seasonally adjusted MLS® sales were down almost three per cent, following a double-digit increase in the fourth quarter of 2010. The reduction in sales was a reflection of the resale market returning to historical levels, as the rush to purchase a home will subside after new mortgage rule deadline on March 18. However, it must be emphasized that the new mortgage rule is considered only one of many factors influencing the housing market. Other factors include the overall strength of the economy, employment and expected changes in mortgage rates. On balance, Kingston's housing market is expected to remain healthy.

Meanwhile, the decline in sales activity this first quarter was experienced across all dwelling types. While the existing single-detached home segment remain stable declined by 12 per cent in March 2011, the combined sales of semi-detached, row and condominium existing homes fell by approximately 31 per cent from March 2010.

### Kingston's Existing Home Market Remains in Balanced Territory

After a strong rebound in late 2009 and early 2010, Kingston's existing home market has been in balanced territory since the second quarter of 2010. The sales-to-new listings ratio (SNLR) is usually a leading indicator of the resale market condition. As of March 2011, the seasonally adjusted sales-to-new listings ratio continued to be within the mid-range of a balanced market, suggesting

Figure 2

the resale average price growth will moderate going forward.

As sales return to a normal pace, the balanced market classification was not only observed in Kingston but in most major existing home markets

across Canada. Essentially, resale homes were sitting on the market for a bit longer than the average number of days recorded in the first quarter of 2010. In Kingston, for example, the number of active listings on the resale

market increased to 1,399 units at the end of March 2011. This represents a 5.3-month of supply at the current sales pace, up from a 4.4-month supply at the end of March 2010.

## Kingston's High-End Houses Gaining Market Share

Between January and March 2011, the market share of existing homes sold at \$500,000 or over increased to four per cent from one per cent in the same period a year ago. Conversely, homes that cost less than \$250,000 lost market share this first quarter, as the pull-forward demand from some first-time buyers dissipated. Most resale condos and row/townhouses sell for less than \$250,000 in Kingston, making these types of dwelling a more affordable entry point for first-time buyers.

The strong first quarter performance in sales of high-end homes was mainly supported by steady income growth among the move-up homebuyer segment

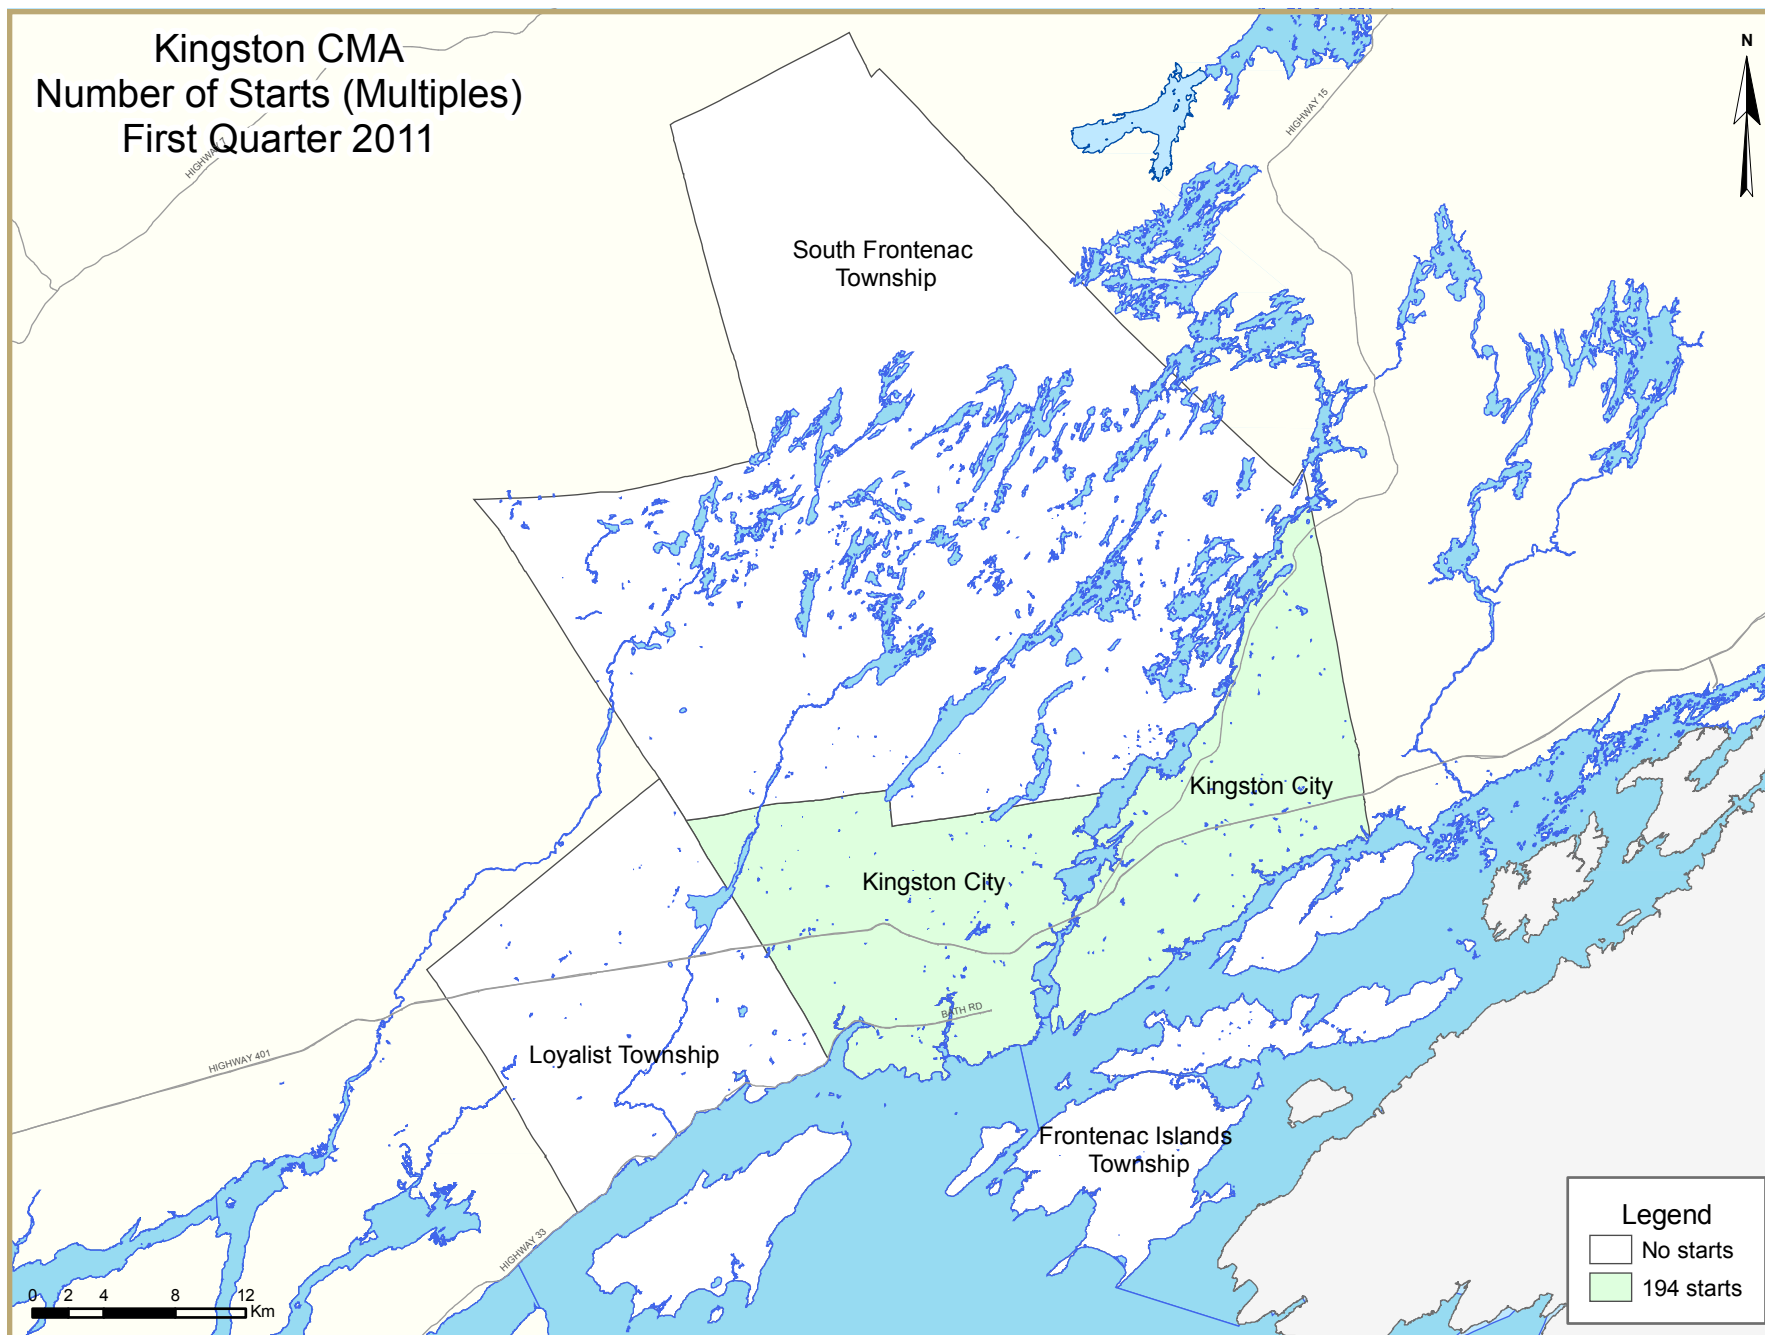

(aged 45-64). In March 2011, full-time employment among this key homebuyer category increased faster than part time positions. As the main vehicle for purchasing a home, strong full-time job gains combined with relatively low mortgage rates continues to support the demand for high priced properties.

Consequently, in recent months, the overall existing home average price in Kingston has been skewed by sales of high-end properties. Despite the decline in overall sales, the unadjusted existing home average price in the first quarter posted its strongest year-over-year growth since the second quarter of 2006.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
