HOUSING MARKET INFORMATION

HOUSING NOW Calgary CMA

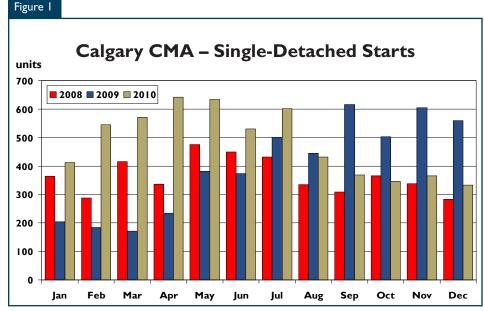

Date Released: January 2011

New Home Market

Calgary housing starts up strongly in 2010, despite recent slowdown

Total housing starts in the Calgary Census Metropolitan Area (CMA) reached 486 units in December 2010, down from 657 units in the previous year. The decline can be attributed to fewer single-detached units breaking ground. Despite the reduction, stronger activity earlier in the year pushed annual construction higher. To the end of December, total housing starts increased from 6,318 units in 2009 to 9,262 units in 2010.

Single-detached builders started work on 333 units in December, down 40 per cent from the 559 units started in the previous year. This represents the fifth consecutive month of year-

over-year declines in single-detached housing starts. Since the summer, builders have started fewer homes in response to higher competition from the resale market and slower new home sales. Despite the moderation in activity in recent months, single-detached starts increased 21 per cent from 4,775 units in 2009 to 5,782 in 2010.

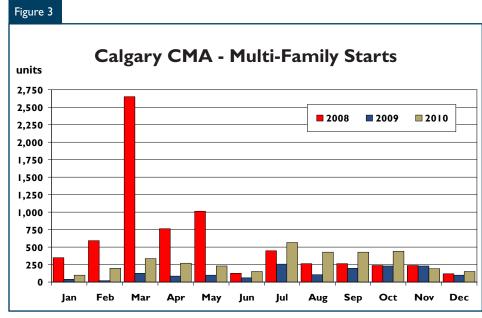

Inventories of complete and unabsorbed single-detached units in December reached 407 units, increasing 2.3 per cent from the previous year. Although inventories declined from the previous month, this is the second consecutive month that inventories have risen on a yearover-year basis. Despite the gain, inventories continue to remain at historically low levels. Completions of single-detached units in December amounted to 541 units, up 27 per cent from a year earlier while absorptions increased 24 per cent to 556 units. For most of 2010, absorptions kept up with completions, however in recent months completions have started to gain some ground putting modest upward pressure on inventories.

The median absorbed single-detached price, which is less influenced than the average by extreme values, reached \$458,500 in December, up eight per cent from the previous year when it was \$424,500. To the end of December, the median absorbed price was \$435,251, three per cent lower than the previous year. Readers should note that these absorbed

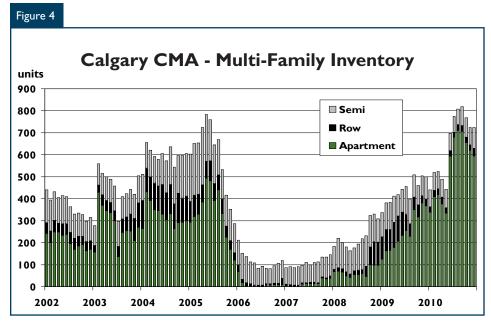

prices reflect units absorbed at or after completion in a given month, which is not necessarily the month when the price was negotiated.

Multi-family starts, which consist of semi-detached units, rows, and apartments, increased from 98 units in December 2009 to 153 units in December 2010. Of the 153 multifamily units started, a majority were semi-detached units with 82 units breaking ground. Row starts in December tallied 55 units, while foundations were poured for only 16 apartment units. Multi-family starts in 2010 reached 3,480 units, up 126 per cent from the 1,543 units started in 2009. While this represents an impressive improvement over the previous year, 2010's performance remained lower than the preceding 10-year average of nearly 5,000 units.

Multi-family completions rose 161 per cent from 99 units in December 2009 to 258 in December 2010. Semi-detached and row units contributed to the majority of completions in December with 90 and 98 units, respectively. The remaining 70

Source: CMHC

Source: CMHC

completions were apartment units. There were also 258 multi-family absorptions in December 2010, more than double compared to the previous year. On a month-over-month basis, semi-detached and row completions surpassed absorptions in December, moving their inventories higher. However, apartment inventories declined for the fourth consecutive month to 594 units in December as absorptions surpassed completions by 26 units. Total multi-family inventories ended 2010 at 723 units, up 45 per cent from 2009.

Resale Market

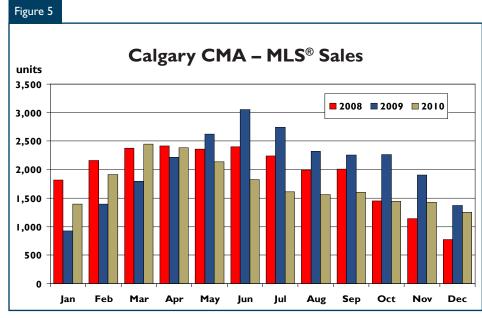

Resale activity has started to improve

Residential MLS® sales in the fourth quarter declined 26 per cent from 5,541 transactions in 2009 to 4,120 in 2010. This was the third consecutive quarter where sales have declined on a year-over-year basis. To the end of December, sales reached 20,996 units, down 16 per cent from the previous year.

Several factors have contributed to the decline in sales in 2010, such as flat wage growth, weaker flows of migration, lack of job creation, and changes to the mortgage qualifying criteria. Sales for most of 2010 had been moving lower on a seasonally adjusted basis, however in recent months the trend has started to show signs of improvement.

Active listings in the fourth quarter continued moving lower after surpassing 11,000 units in the summer of 2010. Fewer new listings entering the market had contributed to the decline. There were 7,072 new listings from October to December 2010, down seven per cent from the 7,613 new listings in 2009. Although active listings have been trending downward since the summer, they continue to remain elevated, providing prospective buyers with a generous selection of homes to choose from. In the last quarter of 2010, active listings averaged 7,754 per month, up 30 per cent from the previous year.

The sales-to-active listings ratio averaged 18 per cent in the fourth quarter, down from 31 per cent in 2009. Although the sales-to-active listings ratio was well below the previous year's level in December, it has been gradually improving on a seasonally adjusted basis since the summer. The sales-to-active listings ratio was still relatively weak and as a result the average price has moderated. In the fourth quarter, the average price was \$391,597,

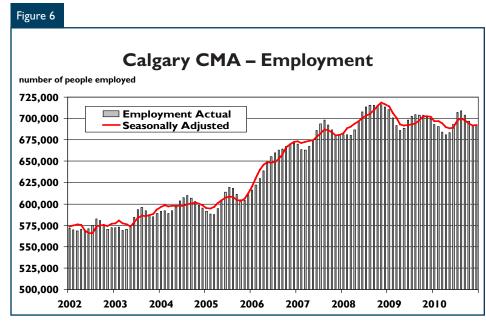

Source: CREA

down two per cent from \$398,867 in the last three months of 2009. This represented the first year-over-year decline since the third quarter of 2009. With the gains achieved earlier in the year, however, the average price to the end of December increased three per cent from \$385,882 in 2009 to \$398,764 in 2010.

Economy

Employment in 2010 slightly down from 2009

Employment growth in the Calgary CMA declined in the fourth quarter of 2010 by one per cent from the same period a year earlier. A majority of the losses were part-time jobs, declining 5.6 per cent year-over-year while full-time jobs remained relatively flat. Job creation was relatively elusive in 2010, with the summer months reporting seasonal gains and other months showing losses. To the end of December, average employment was down by 0.7 per cent from 2009 levels. Despite the lack of job creation in 2010, employment levels on a seasonally adjusted basis have started to show signs of stabilizing. The unemployment rate has also declined since the spring of 2010, from 7.2 per cent in the second quarter to an average of 5.9 per cent from

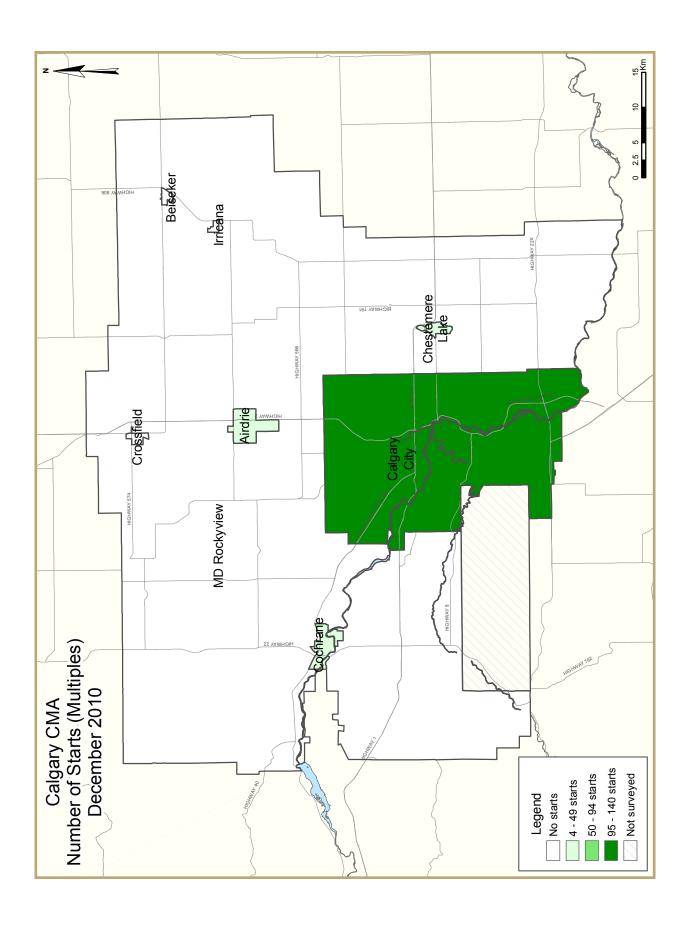

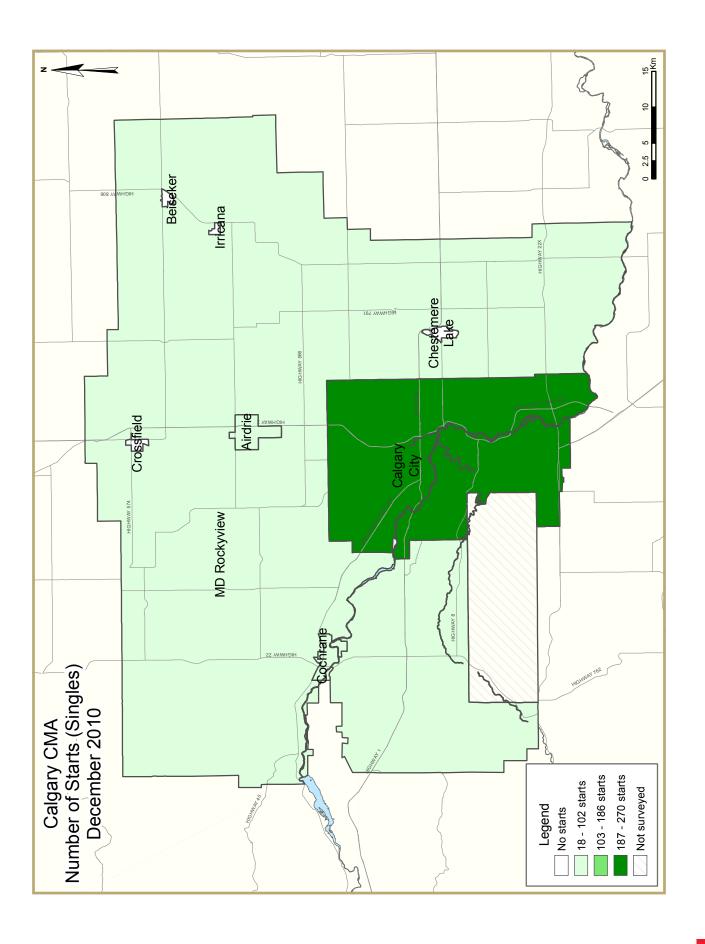

Source: Statistics Canada

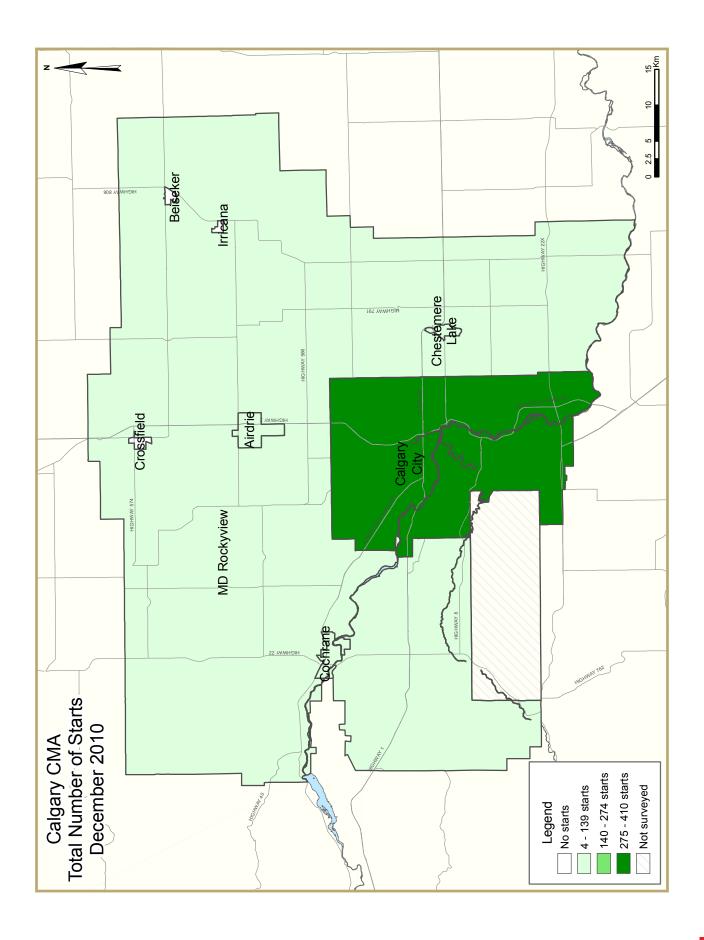

October to December. Although the unemployment rate has been moving lower, it still remains elevated and has thus inhibited wage gains. To the end of 2010, average weekly earnings remained flat compared to the previous year, averaging \$982 per week.

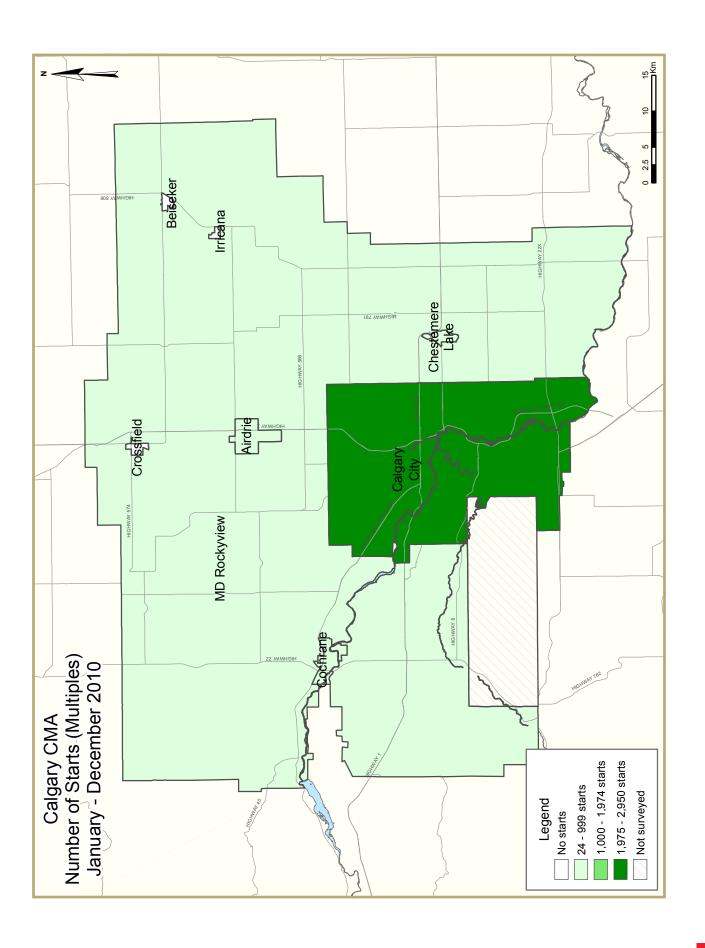

Net migration into Alberta has been gradually recovering in 2010. In the third quarter, net migration increased 35 per cent over the previous year after declining 60 and two per cent in the first and second quarters, respectively. This also represents the first year-over-year increase

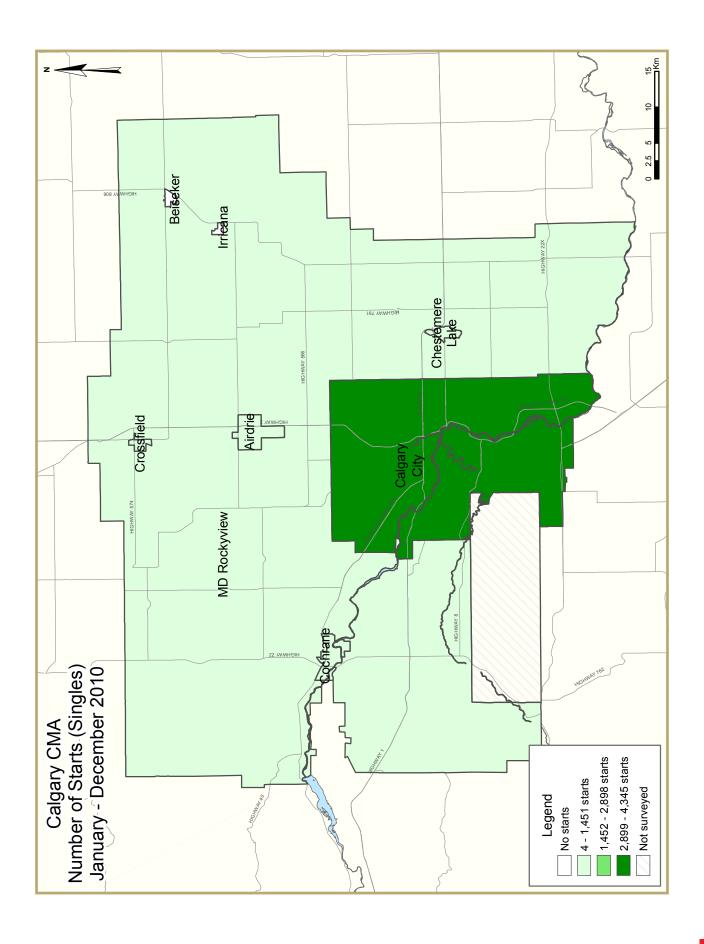

since the first quarter of 2009. Improvements in interprovincial migration contributed to the rise, an area that had demonstrated weakness in previous quarters. In addition, migrants from other countries continued to head to Alberta with net international migration in the third quarter up 42 per cent year-over-year. Despite the gains in the third quarter, year-to-date net migration in Alberta continued to trail behind 2009 levels due to the declines experienced in the first two quarters. To the end of September, net migration in Alberta was down 24 per cent from a year earlier.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
