

# HOUSING NOW

## Calgary CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: May 2011

### New Home Market

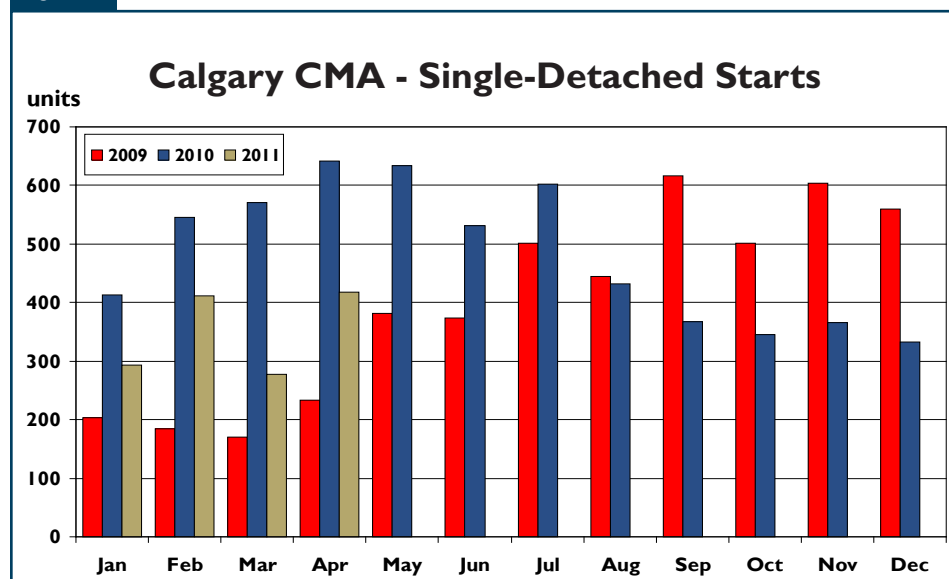

#### Calgary's housing starts decrease in April

For the third consecutive month, total housing starts in Calgary declined on a year-over-year basis in April. Housing starts in the Calgary Census Metropolitan Area (CMA) reached 556 units in April 2011, down from 909 units in the previous year. To

the end of April, total housings starts decreased from 3,070 units in 2010 to 2,104 units in 2011.

A total of 418 single-detached units broke ground in April 2011, down 35 per cent from the 642 units started in the previous year. This represents the ninth consecutive month that starts were lower on a year-over-year basis. New home construction will remain modest until demand improves and active listings in the resale market

move to more balanced levels. After four months, 1,399 single-detached units were started, 36 per cent lower than the 2,170 units started from January to April of 2010.

Single-detached completions declined 20 per cent to 439 units in April 2011, down from 550 units in 2010. There have not been as many homes under construction compared to the previous year, since starts moderated

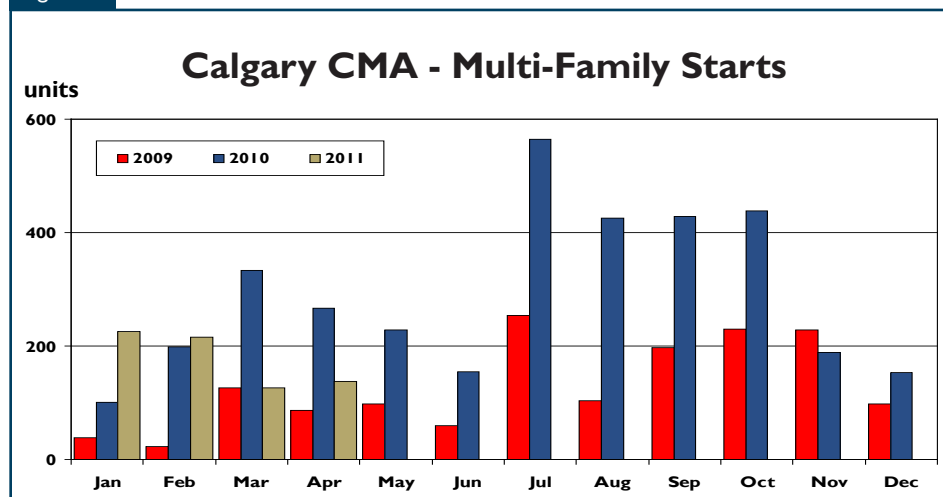

in the second half of 2010 and early 2011. The number of homes under way in April was down 32 per cent from a year earlier. Absorptions in April were outpaced by completions for the first time since November 2010. There were 411 single-detached units absorbed in April, a decrease of 21 per cent from a year earlier. With completions surpassing absorptions by 28 units, inventories increased on a month-over-month basis to

382 units in April. Despite the rise, the inventory of complete and unabsorbed units remains relatively low and was down ten per cent from the previous April.

The median absorbed single-detached price, which is less influenced than the average by extreme values, reached \$448,569 in April, up 6.9 per cent from the previous year when it was \$419,685. To the end of April, the median absorbed price increased 9.5 per cent year-over-year to \$452,179. Readers should note that these absorbed prices reflect units absorbed at or after completion in a given month, which is not necessarily the month when the price was negotiated.

Multi-family production, which includes semi-detached units, rows, and apartments, decreased 48 per cent in April from 267 units in 2010 to 138 units in 2011. Following a strong start to the year, multi-family starts have now moved lower for the second month in a row. Fewer semi-detached, row, and apartment starts all contributed to the decline. To the end of April, multi-family starts reached 705 units, down 22 per cent from corresponding levels last year.

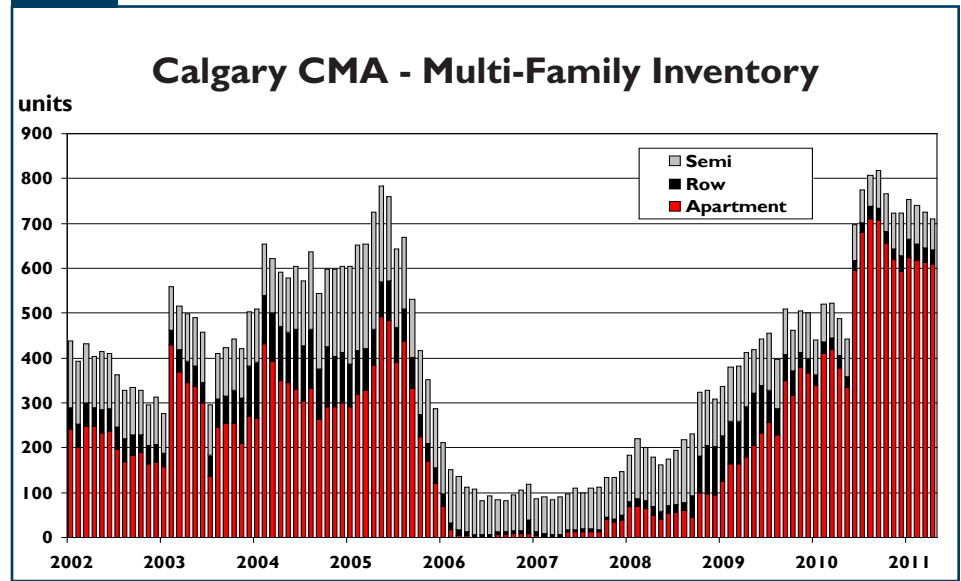

Figure 3

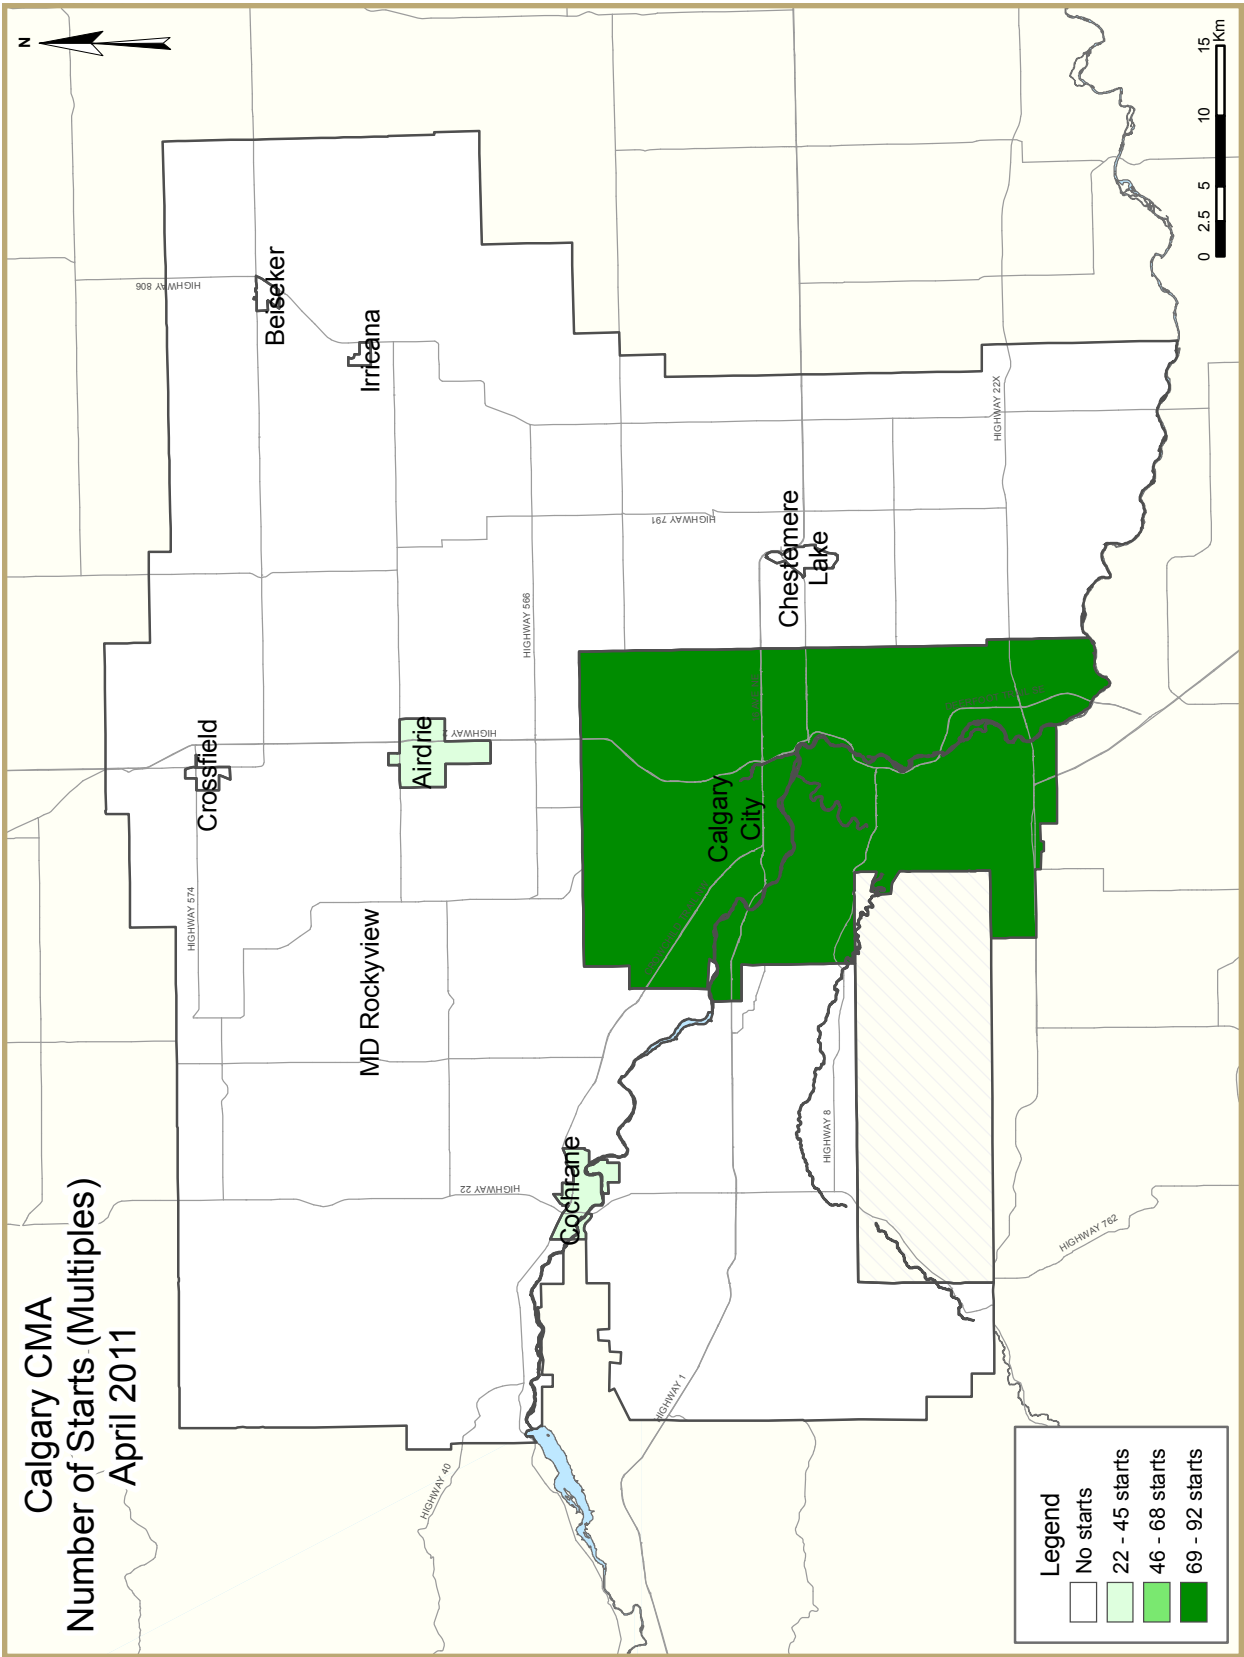

Source: CMHC

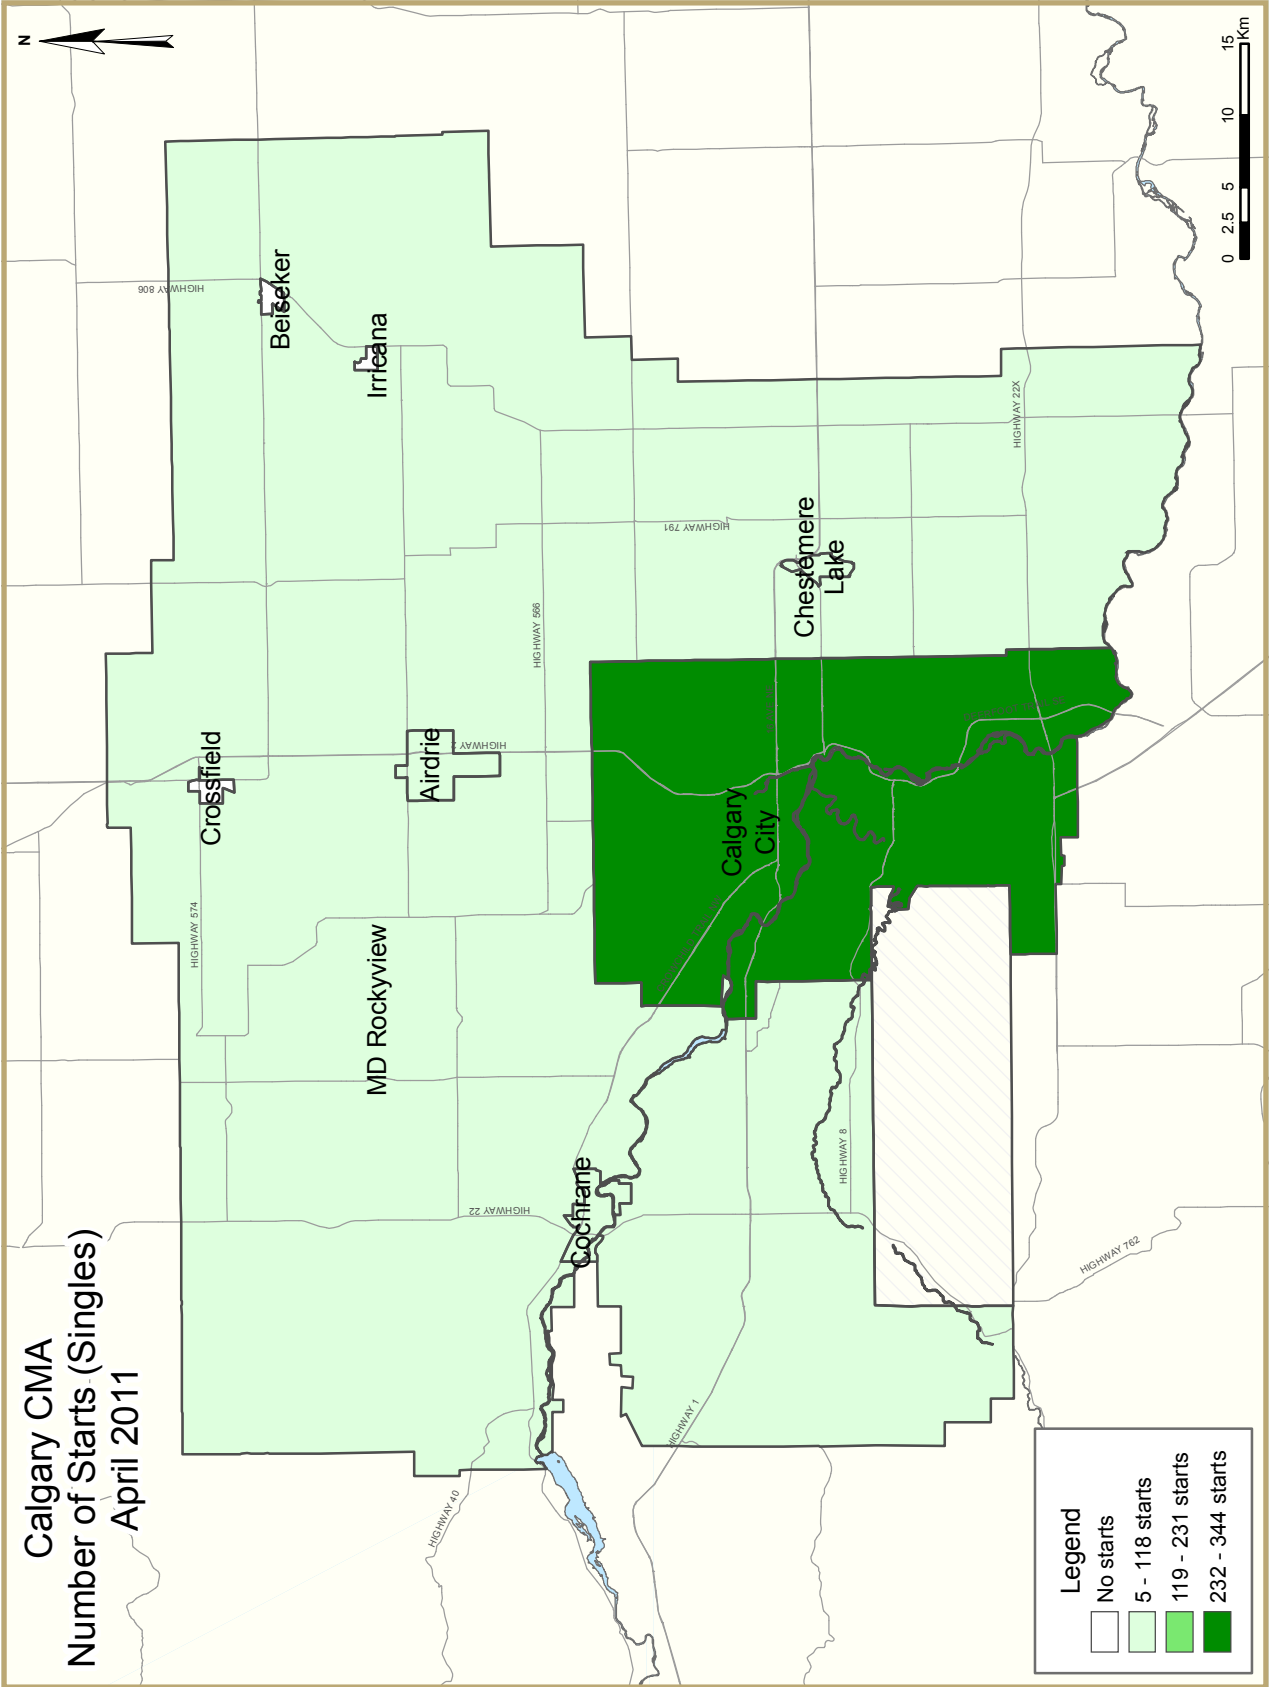

April's inventory of complete and unabsorbed multi-family units was up 45 per cent year-over-year, from 488 units in April 2010 to 710 units in 2011. Although at elevated levels, multi-family inventories declined for the third consecutive month, with the tally in April reaching its lowest level since June 2010. Multi-family completions reached 199 units in April, up 97 per cent from the previous year. A majority of the completions were row dwellings with 123 units, while 76 were semi-detached units. As was the case a year earlier, there were zero apartment units completed in April. Absorptions totalled 214 units in April 2011, an increase from 136 units in April 2010. Of the 214 absorptions, 87 were semi-detached, 122 were row, and five were apartment units.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
