Date Released: July 2011

Montréal Metropolitan Area Housing Starts in June 2011

The results of the latest starts survey conducted in June 2011 by Canada Mortgage and Housing Corporation (CMHC) revealed that 1,810 housing units were started in the Montréal census metropolitan area (CMA)

during this month, versus 2,035 in June 2010.

The 11-per-cent decrease in starts was in line with the trend that has characterized the new home market since the beginning of the year. However, condominium construction moderated the declines registered in the other market segments this past month. Once again, the condominium segment stood out, posting a record number of starts for a month of June, with 1,008 new units. In the

freehold home segment, the decrease in activity affected both the single-detached housing category (-22 per cent) and the semi-detached and row home category (-31 per cent). Rental housing starts¹, for their part, fell by 42 per cent.

The data by sector reveal that residential construction remained stable on the Island of Montréal (+2 per cent) and in Vaudreuil-Soulanges (-1 per cent) but declined in the North Crown (-20 per cent) and the South Crown (-13 per cent). Condominium starts were responsible for this geographic picture of residential construction. On the Island, condominiums—the only segment to have posted a gain (+34 per cent)—accounted for the vast majority of housing starts this past month. In Vaudreuil-Soulanges, condominium activity more than doubled and offset the significant decrease observed in single-detached home building (-46 per cent).

In the South Crown, the declines registered in the other market segments cancelled out the increase in condominium starts (+23 per cent) while, in the North Crown, the decrease in activity affected all market segments with the exception of rental housing, for which starts rose by 4 per cent.

During the first half of 2011, housing starts fell by 8 per cent from a year earlier in the Montréal CMA, reaching 10,270 units. Condominiums were the only segment to have registered an increase (+12 per cent). Since the beginning of the year, this segment has supported the new home market with a level of activity that now largely exceeds the volume of new freehold homes. Condominiums are on a roll, with housing projects of this type intended for a vast and varied client group and benefiting from a strong demand. However, activity in this segment is bound to slow down in the second half of the year, as the units currently under construction arrive on the market. In the freehold home segment, single-detached houses sustained a decrease of 26 per cent and semi-detached and row homes recorded a drop of 13 per cent. Rental housing starts, for their part, were down by 3 per cent.

MLS® sales down in the second quarter of 2011

According to data from the Quebec Federation of Real Estate Boards (QFREB), 12,149 MLS® sales were registered in the second quarter of 2011, for a drop of 7.9 per cent from the same period last year. This decline marked the fifth straight quarterly decrease in activity on the

Montréal area resale market. MLS® transactions fell by 9.4 per cent in the case of single-family houses and by 15.9 per cent for plexes. However, the slowdown was less pronounced in the condominium segment, where MLS® sales dipped by 2.1 per cent.

Active listings, for their part, continued to rise for a third consecutive quarter, posting an increase of 18.1 per cent. This hike resulted from the combined effect of the decrease in sales and the marked increase in new listings (+7.0 per cent). The growth in supply extended to all market segments, as new listings went up by 9.9 per cent for condominiums, by 6.3 per cent for single-family houses and by 2.2 per cent for plexes. As a result, the resale market moved progressively closer to the balanced range, but conditions still remained favourable to sellers.

The average MLS® price registered a gain of 6.2 per cent in the second quarter of 2011, reaching \$317,871. While still significant, the growth in prices will moderate as resale market conditions gradually ease. In the different market segments, the price increases were notable for single-family homes (+8.2 per cent) and plexes (+4.7 per cent), but the rise was more modest in the case of condominiums (+2.2 per cent).

¹ In this report, the data presented on the rental segment exclude co-operative housing starts.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
