Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

Notes: Data in tables may not sum due to rounding.

Charts

1.	Total cargo handled at Canadian ports and marine terminals	12
2.	International cargo handled at Canadian ports and marine terminals	13
3.	Domestic cargo handled at Canadian ports and marine terminals	13

Highlights

- The global economic recession in 2009 had a considerable negative impact on the activities of Canadian ports and marine terminals. Total cargo handled decreased to 409.1 million metric tonnes (Mt) during the year compared to 464.0Mt in 2008.
- Declines in both domestic (-22.2%) and international (-7.4%) shipments contributed to the overall decrease in the tonnage handled during 2009.
- The quantity of domestic cargo slumped to 107.4Mt, the lowest level of shipments since 2000. The decrease was led by the loss of nearly one third of the domestic tonnage of the country's principal commodity, crude petroleum, as compared with 2008.
- International containerized cargo handled at Canadian ports decreased in terms of volume and tonnage during 2009. The volume of containerized cargo dropped 11.8% to 3.9 million twenty-foot equivalent units (TEUs), and the tonnage fell 7.9% to 34.8 Mt.
- Canada's marine traffic to and from the United States decreased 16.1% to 99.5Mt, the lowest level of shipments since 1997.
- In 2009, international shipments with countries excluding the United States fell to 202.2Mt from 207.4Mt the year previous, due largely to reductions in inbound cargo.
- Total cargo handled by the 17 Canadian Port Authorities was 234.2Mt, down from 253.5Mt in 2008. The tonnage shipped through these ports and terminals represented 57.2% of the total marine cargo handled in Canada in 2009.
- Tonnage handled at Port Metro Vancouver, the nation's busiest port, decreased 7.1% to 90.1Mt. Most notable among the commodities which experienced declines at the port was potash (-64.1%).
- Overall, the largest overall decline in shipments occurred at Nanticoke, where the tonnage was more than cut in half, dropping to 5.8Mt in 2009 from 14.1Mt in 2008, due to significant declines in both coal and iron ores and concentrates.
- Port-Cartier experienced the largest gain (14.7%) in tonnage handled as international outbound shipments of iron ores and concentrates rose substantially.
- Marine activity at Port Hawkesbury remained stable at 29.4Mt. The drop in shipments of gasoline and aviation turbine fuel (-1.3Mt) and other non-metallic minerals (-0.7Mt) were mostly offset by gains in crude petroleum (1.7Mt).
- The total cargo handled at Saint John, New Brunswick rose 2.8% to 26.3Mt. A large portion of the gain can be attributed to increased shipments of other refined petroleum and coal products (64.9%).
- The port of Come-by-Chance handled 24.3Mt, down 20.1% as compared to 2008. The decrease was due to a sharp drop (-18.6%) in crude petroleum, the port's principal commodity.
- Total shipments at Montreal, including Contrecoeur, fell 11.4% to 23.8Mt. As Canada's second largest container facility, the port experienced its first decline in containerized cargo since 2001.

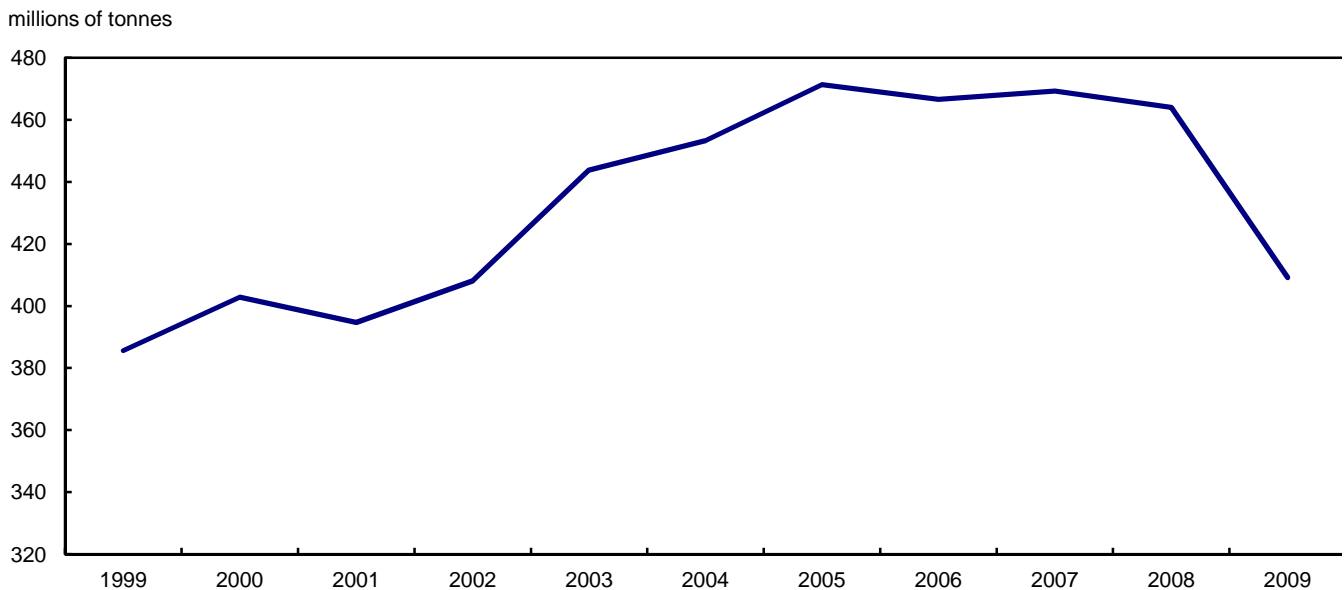

- After a record-setting year in 2008, total tonnage at the port of Québec, including Lévis, dropped 16.9% to 22.3Mt in 2009. The decline was primarily the result of the downturn in the demand for iron ore and concentrates by the steel industry.
- The weakness in the North American steel market also had a significant negative impact on shipping activity at Sept Îles, including Pointe-Noire. Total tonnage handled at the port in 2009 was 20.1Mt, a drop of 9.7%.
- The port of Prince Rupert handled 11.3Mt a gain of 14.0% as compared to 2008. The increase was the largest among the Port Authorities. The top ten commodities handled by the ports and marine terminals accounted for approximately 70% of the total tonnage in 2009. With the exception of gains in shipments of wheat (14.6%) and salt (5.5%), all the remaining eight commodities reported reductions over 2008.

Shipping in Canada 2009 (preliminary)

First observed in the latter half of 2008, the full impact of the global economic slowdown was experienced by the Canadian economy in 2009. On the strength of sharp decreases in both export and import demand, real gross domestic product declined 2.8% in 2009, from the slight 0.7% gain in 2008¹. Overall, the nominal value of total merchandise trade dropped 20.3% to \$743.4 billion. In particular, the sharp drop in merchandised exports (down 24.4%) resulted in a dramatic change to Canada's trade balance, which shifted from a surplus of \$45.0 billion in 2008, to a deficit of \$4.7 billion, its first since 1975².

The impact of the global economic recession had a major negative effect on the country's overall marine shipping activity. Total cargo handled at Canada's ports and marine terminals in 2009 was 409.1 million metric tonnes (Mt), down 11.8% from 464.0Mt a year earlier. The drop in shipments represented the largest change in year over year shipping activity since the recession of 1981-1982³. In 2009, reductions in both international and domestic⁴ cargo contributed to the decline.

Chart 1
Total cargo handled at Canadian ports and marine terminals

1. Statistics Canada, CANSIM 380-0002.

2. Statistics Canada, CANSIM 228-0003.

3. Comparative analysis based on data taken from various issues of Shipping in Canada, Statistics Canada catalogue 54-205-X.

4. Note that domestic cargo is handled twice by the Canadian ports and marine terminal system, once when loaded and again when unloaded.

Chart 2
International cargo handled at Canadian ports and marine terminals

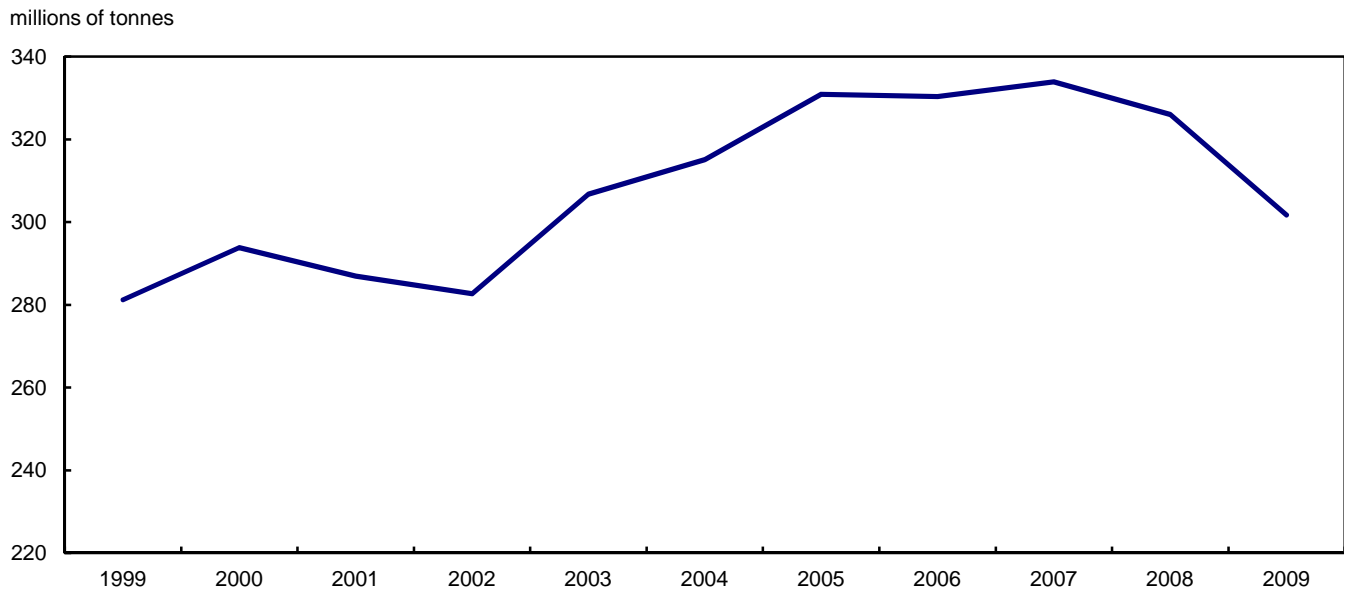

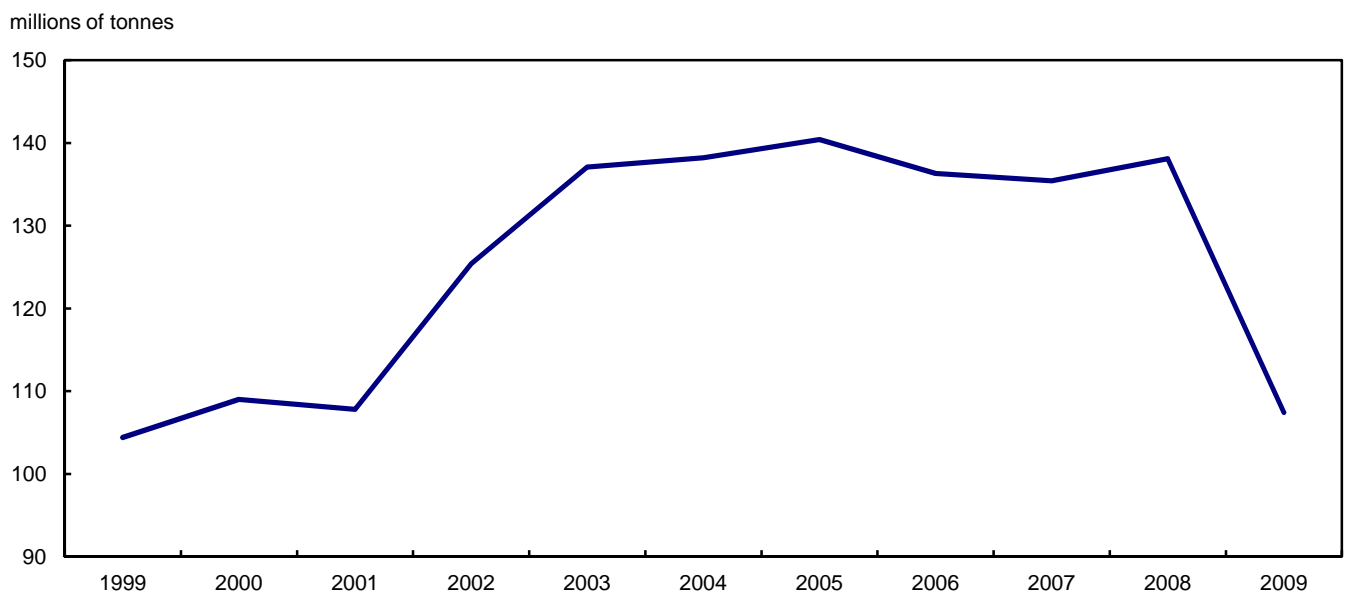

Chart 3
Domestic cargo handled at Canadian ports and marine terminals

International Marine Traffic

The contraction in world trade brought about by the economic recession led to a decrease in the tonnages handled of international cargo (between Canadian and foreign ports), which fell 7.4% to 301.7Mt in 2009. This represents the lowest level of international shipments since the 282.7Mt reported in 2002. Sharp reductions were observed

in inbound shipments of coal (down 6.7Mt) and iron ores and concentrates (down 5.5Mt), primarily originating from the United States. The activity in outbound shipments was more mixed, with gains in tonnages occurring in several commodities, including wheat (up 3.6Mt); iron ores and concentrates (up 3.2Mt); and crude petroleum (up 2.2Mt). However, these increases were insufficient to offset declines in potash (down 4.6Mt); other non-metallic minerals and coal (each down 2.9Mt); and stone, sand, gravel and crushed stone (down 2.8Mt).

Container Traffic

Overall, international container traffic at Canadian ports experienced their first decreases in both volume and tonnages since 2001. Container volumes declined 11.8% to 3.9 million twenty foot equivalents (TEUs), while container tonnages decreased 3.0Mt to 34.8Mt. Primarily responsible for these reductions were lower inbound shipments from Europe and Asia, which dropped 1.3Mt and 1.2Mt respectively. In contrast, only a slight decline was recorded in outbound shipping activity as a sharp drop in shipments to Europe were mostly offset by an increase in shipments to Asia.

While the majority of Canadian ports reported reductions in container cargo, Prince Rupert continued to show gains. For the second consecutive year the port led the country in the growth of volume of containers handled.

Canada – United States Cargo

In 2009, Canada's marine traffic to and from the United States continued to trend downward for a fourth consecutive year, decreasing 16.1% to 99.5Mt, the lowest level of shipments since 1997. Shipments of both inbound and outbound freight experienced declines of 29.1% and 8.2% respectively.

The decline in inbound activity was largely driven by major declines in shipments of coal (down 7.0Mt) and iron ore and concentrates (down 5.3Mt) arriving from the United States Great Lakes ports. Poor market conditions, particularly in the North American auto sector, led to a weakness in domestic demand for steel, resulting in the temporary closure of several Canadian steel mills. Overall, inbound shipments from ports on United States Great Lakes slumped 37.8%. Declines were also observed in cargo arriving from United States Pacific ports. Inbound cargo on the United States Atlantic and Gulf region remained relatively unchanged. For this region, strong gains in shipments of coal and fuel oils were mostly offset by substantial declines in alumina, other basic chemicals and other refined petroleum and coal products.

Contributing to the overall drop in cross-border shipment of cargo was the severity of the recession in the United States. Outbound cargo destined for ports in the United States also felt the impact of the economic downturn in the North American steel production as shipments of iron ores and concentrates fell 43.8%. In addition, the decrease in outbound tonnage was further compounded by the slump in the United States construction and housing markets. Shipments of stone, sand, gravel and crushed stone and other non-metallic minerals also recorded substantial declines. Although most strongly felt in the United States Great Lakes (down 17.6%), reductions in the level of outbound cross border traffic occurred across all regions. Despite falling 4.6%, ports located in the United States Atlantic and Gulf region continued to be the primary destination points for outbound cargo.

Ships registered in Canada handled 38.8% of the Canada – United States marine traffic, down from 41.0% in 2008. Canadian flagged vessels continued to account for an ever increasing share of the Canada-United States Great Lakes activity rising to 89.3% from 82.2% in 2008. On the west coast of the United States, the proportion of cargo carried by Canadian registered vessels rose from the 23.1% recorded in 2008 to reach 27.0%. Shipping activities between Canada and ports in the United States Atlantic and Gulf region were conducted primarily by foreign flagged vessels.

Canada Overseas Cargo

Canada's marine shipments with countries other than the United States slipped 2.5% in 2009, to 202.2Mt. The drop in tonnage handled was due, almost exclusively, to a reduction in inbound cargo which fell 6.5% to 72.9Mt.

With the exception of Europe which grew (up 0.9Mt), cargo arriving from most other countries, excluding the United States, declined. Most notable among these were ports in Asia (down 1.9Mt) and Africa (down 1.7Mt). The growth in traffic arriving from Europe was led by an increase in shipments of crude petroleum which had, in 2008, been shipped primarily from ports in Africa.

Outbound shipments to other countries (excluding the United States) remained steady at 129.3 Mt, from the levels reported a year earlier. Gains were recorded in shipments of iron ores and concentrates (up 5.9Mt) and wheat (up 3.5Mt). These increases were mostly offset by decreases in shipments of potash (down 4.4Mt) and coal (down 2.6Mt). Regionally, the growth was mostly attributed to cargo sent to Asia (up 11.4Mt) which were counterbalanced by sharp declines in the cargo moving to Europe (down 7.4Mt) and South America (down 3.0Mt). The gains in shipments to Asia were led by increases of iron ores and concentrates (up 5.8Mt) resulting from increased steel production in Asia, primarily in China and India.⁵ In contrast, reductions in the demand for coal were key factors in the overall declines noted in both Europe (down 3.4Mt) and South America (down 0.9Mt).

Canadian flagged ships continued to carry a negligible amount of the cargo exchanged with overseas ports. The majority of foreign (excluding the United States) marine cargo was carried by vessels registered in Panama (24.5%), Greece (10.9%) or Hong Kong (9.8%).

Domestic Cargo

At 107.4Mt, the quantity of domestic cargo handled by Canadian ports in 2009 was the lowest level of domestic shipments recorded over the last decade. Further, this figure represents a decrease from the near record levels of 138.1Mt the year previous. With few exceptions, shipments for the majority of commodities exhibited declines. Approximately one third of these losses were attributed to a sharp drop in the domestic marine shipping industry's predominant commodity, crude petroleum. While still retaining its overall leading position, shipments of crude plunged 10.1Mt to 26.1Mt (down 27.9%). Other significant declines in tonnage handled were also registered in iron ores and concentrates (down 4.2Mt); logs and other wood in the rough (down 4.0Mt); other metallic ores and concentrates (down 2.6Mt); limestone (down 2.5 Mt); and wood chips (down 1.6Mt).

Ports and marine terminals in the Atlantic Region bore the full impact of the sharp drop in domestic shipments of crude petroleum falling to 26.1Mt from 36.2Mt in 2008.

Weakness in the domestic demand for steel coupled with the temporary closures of several Canadian steel mills had a significant negative impact on the tonnages of commodities handled in several regions. Led by a substantial drop (down 3.4Mt to 1.6Mt) in shipments of iron ores and concentrates, overall domestic cargo volumes in the St. Lawrence region fell 7.8Mt to reach 21.7Mt. In addition, the tonnage handled of another of this region's principal commodities, other metallic ores and concentrates, decreased (down 2.4Mt). Sharp declines (down 0.9Mt) in tonnages of iron ores and concentrates handled were also experienced by ports in the Great Lakes Region. This together with the downturn in shipments of limestone; metallic waste and scrap; coal; and coal coke and petroleum coke (each down 0.5Mt) resulted in the Great Lakes Region ports recording a decline of 5.0Mt in shipments to reach 26.3Mt.

Ports in the Pacific Region handled 21.4Mt of cargo in 2009, 7.5Mt less than in 2008. Several commodities, most notably logs and other wood in the rough (down 4.0Mt), limestone and wood chips (each down 1.5Mt) were the major factors responsible for the decline.

5. Listing of the largest steel producing countries, World Steel Association January 21, 2011.

Port Authorities

Total cargo handled by the 17 Canadian Port Authorities⁶ (CPAs) fell to 234.2Mt in 2009 from 253.5Mt in 2008. However, the share of cargo handled by the CPAs in 2009 edged up slightly, accounting for 57.2% of total shipping activity, compared to 54.6% in 2008.

In 2009, shipping activity at Port Metro Vancouver declined 7.1% to 90.1Mt. In spite of strong gains in several commodities, notably grains⁷ (up 3.5Mt) and crude petroleum (up 1.6Mt), the level of shipments among the majority of the remaining commodities was lower. In particular, outbound shipments of potash shrunk considerably (down 64.1%) in response to the collapse in world demand for potash⁸. Substantial declines in cargo handled were also noted for logs and other wood in the rough; and coal (each down 1.9Mt) and sulphur (down 0.9Mt).

Although the port maintained its position as the nation's leading container facility⁹ both the volume and tonnage of containerized cargo declined. The port handled 2.2 million TEUs; down 13.6% from the 2.5 million TEUs in 2008. The level of containerized cargo handled fell 6.1% to 19.0Mt. A slight upswing in the tonnages of outbound containerized cargo (up 0.5Mt) was insufficient to offset the sharp drop in inbound activity (down 1.7Mt).

The total cargo handled at the Port of Saint John, New Brunswick rose 2.8% to 26.3Mt in 2009. Shipments of other refined petroleum and coal products (up 0.7Mt) at the port rose following the completion of the country's first liquefied natural gas terminal during the year. Other commodities which registered gains included fuel oils (up 0.4Mt) and gasoline and aviation turbine fuel (up 0.2Mt). The gains were dampened by the dramatic downturn in shipments of potash (down 70.0% to 0.2Mt) which fell in the wake of poor market conditions. Despite the overall gain in tonnage, the volume of international containers handled at the port fell 10.0% to 44,198 TEUs during the year.

Montréal (including Contrecoeur) handled 23.8Mt of cargo in 2009, down 11.4% from 2008. Declines in both international and domestic cargo contributed to the decrease in shipments. The reduction in international activity (down 2.0Mt) can be attributed to a drop in containerized freight handled at the port, which represents the majority of its activity. As Canada's second largest container facility, the volume of international containers handled at the port fell 17.2% to 1.1 million TEUs. In addition, the port experienced lower levels of inbound domestic shipments of iron ores and concentrates (down 0.7Mt).

After posting several years of positive growth, cumulating in record shipments of 26.8Mt in 2008, total tonnage at the Port of Québec (including Lévis) fell to 22.3Mt in 2009. Both international and domestic marine activities at the port were negatively impacted by the downturn in the North American steel industry. During the year, reductions were observed in international arrivals of iron ores and concentrates (down 1.8Mt) and coal coke and petroleum coke (down 0.7Mt). Further, outbound domestic shipments of coal coke and petroleum coke (down 0.6Mt) also decreased during the year.

Similarly, total tonnage handled at Sept-Îles (including Pointe-Noire) also felt the impact of a weaker steel market, falling 2.2Mt to 20.1Mt in 2009. Shipments of the port's primary commodity, iron ores and concentrates, dropped to their lowest levels (17.3Mt) since 2004, when supply was interrupted by a prolonged labour dispute at two mining companies.

The Port of Prince Rupert registered the strongest gains during 2009 among all the Port Authorities, as marine shipping activity grew 14.0% to reach 11.3Mt. Despite a drop in shipments of coal (down 0.8Mt), total tonnage handled at the port was buoyed by an upswing in shipments of grains¹⁰ (up 1.3Mt), primarily destined for the Middle East. The port also made gains in its container traffic. The tonnage of containerized cargo handled rose 53.3% to 1.9Mt, while the volume of containers reached 264,714 TEUs.

6. Canadian Port Authorities created under the Canada Marine Act (1998) were: Belledune, Fraser River, Halifax, Hamilton, Montréal, Nanaimo, North Fraser River, Port Alberni, Prince Rupert, Québec, Saguenay(Chicoutimi), Saint John, Sept-Îles, St. John's, Toronto, Thunder Bay, Trois-Rivières, Vancouver and Windsor Ontario. As of January 2008, Fraser River, North Fraser River and Vancouver were merged to create Vancouver Fraser Port Authority (Port Metro Vancouver).

7. Grains include wheat, colza seeds(canola), barley, rye, oats and other cereal grains.

8. Natural Resources Canada, Canadian Minerals Yearbook (2009) reports global potash production and trade volumes in 2009 to be the lowest in 30 years.

9. Port Metro Vancouver handled 54.9% of all containers in Canada in 2009.

10. Grains include wheat, colza seeds(canola), barley, rye, oats, and other cereal grains.

In 2009, total tonnage at the Port of Halifax dropped 6.0% to 10.2Mt. The decline in tonnage was fuelled, in large part, by decreases in shipments of other non-metallic minerals (down 0.2Mt); crude petroleum, newsprint and other manufactured and miscellaneous goods (each down 0.1Mt). Gains in shipments of wood pulp and fuel oils (each up 0.1Mt) were not sufficient to offset the declines. In addition, the port handled 315,095 TEUs containing 2.6Mt of international containerized cargo in 2009, as compared to 343,952 TEUs and 2.9Mt a year previous.

Marine cargo at the Port of Hamilton in 2009 fell 24.1% to 8.2Mt, the lowest level of shipments since 1983. Activity at the port is strongly influenced by conditions in the steel market, which experienced a serious downturn during the year following the temporary closure of several domestic steel mills in response to the economic recession. The result was a drop in shipments for iron ores and concentrates (down 1.4Mt); coal; iron and steel-primary or semi-finished (each down 0.4Mt). Also contributing to the decrease in overall tonnage handled was the drop in shipments of grains¹¹ (down 0.2Mt). Slight gains in tonnage handled were registered for other oilseeds and nuts and other agricultural products (up 0.2Mt) and coal coke and petroleum coke (up 0.1Mt).

In 2009, shipments at the Port of Thunder Bay dropped 8.7% to 7.2Mt, due to a lowering of outbound international cargo. Leading the decline were reductions in coal (down 0.4Mt) other oilseeds and nuts and other agricultural products (down 0.2Mt) and potash (down 0.1Mt). The tonnage of domestic cargo handled rose marginally (up 1.3%) as lower shipments of coal (down 0.2Mt) were offset by higher shipments of grains¹².

After climbing slightly in 2008, the tonnage handled at the Port of Windsor (Ontario) slid 4.9% to 4.7Mt in 2009. A drop in the tonnage of domestic cargo (down 0.3Mt) was responsible for the decrease. Overall shipments of two of the port's principal commodities, limestone (down 0.2Mt) and stone, sand, gravel and crushed stone (down 0.1Mt) were hampered by the slump in the construction industry.

Shipping activity at the Port of Belledune rose 9.4% to 2.6Mt in 2009. Higher levels of domestic cargo (up 0.2Mt), particularly other non-metallic mineral products and fuel oils, were primarily responsible for the gain in shipments. International shipments, which comprise the majority of the port's activity (85%), remained virtually unchanged from the level reported the year previous.

The tonnage handled at Trois-Rivières remained steady at 2.5Mt in 2009 from the 2008 level, as increased domestic shipments were offset by declines in international cargo. Overall activity at the port was sustained by strong growth in shipments of wheat, which rose during the year to reach 0.9Mt, from 0.4Mt in 2008. These gains were sufficient to offset the declines observed in the majority of the remaining commodities handled at the port.

After gaining ground in 2008, the cargo handled at Toronto retreated 15.9% to 1.7Mt in 2009. A sharp decline (0.3Mt) in the shipments of sugar, one of the port's principal commodities, was the main reason for the drop in cargo handled. In addition, the port reported reductions in the levels of both stone, sand, gravel and crushed stone; and cement.

Total cargo handled at St. John's, Newfoundland and Labrador in 2009 was 1.4Mt, virtually unchanged from the levels reported in 2008. Increased shipments of gasoline and aviation turbine fuel; and other refined petroleum and coal products were counterbalanced by decreases in fuel oils; and mixed loads or unidentified cargo.

Port Alberni handled 1.1Mt of marine cargo in 2009, a decline of 12.4% from 2008. Decreases in both domestic and international shipments contributed to the decline. Shipments of logs and other wood in the rough, which accounted for 93% of the port's marine activity, dropped 0.2Mt.

In 2009, the Port of Nanaimo handled 0.8Mt of marine freight as compared to 1.0Mt in 2008. The decline in shipments was due, almost exclusively to a decrease in domestic cargo.

The total amount of marine cargo handled at the Port of Saguenay was 302 kilotonnes in 2009, down from the 342 kilotonnes the year previous. Decreases in both domestic (down 23.9%) and international shipments (down 3.9%) were responsible for the decline. The drop in domestic cargo was triggered by a reduction (down 27.1%) in the tonnage of salt handled at the port.

Data quality, concepts and methodology

Introduction

The statistics in this publication were collected under the authority of the *Statistics Act* (Revised Statutes of Canada, 1985, chapter S19). The statistics are derived from two surveys: the Coastwise Shipping Survey (Survey number 2751) and the Marine International Freight Origin Destination Survey (Survey number 2791).¹ The purpose, populations, data sources, and data quality for these surveys are discussed in the following sections.

Purpose of the surveys

These surveys collect data on:

- Coastwise or domestic marine transport - the carriage of cargo by ships between Canadian ports in Canadian waters; and,
- International marine transport – the carriage of cargo between Canadian ports and foreign ports in the United States or overseas.

The information collected in these surveys includes the description and quantities of commodities loaded and unloaded at Canadian ports and marine terminals by vessels calling at those facilities, and the origin and destination of those commodities. Data are aggregated for publication of commodity traffic by Canadian port and foreign country of origin or destination.

Statistics Canada uses these data as one input to Canada's System of National Accounts. The data are also used by Transport Canada, other federal departments, provincial ministries, transportation companies, consulting firms, universities and foreign governments. This information is used to analyse transportation activities, for marketing and economic studies, and to assess the industry's performance.

Survey populations

For each survey it is possible to define a target population as all the units (e.g., ships) for which data were intended to be collected and a survey population as all the units for which the survey actually provides data. The survey population may differ from the target population when it is not possible to identify or to survey all of the units within the target population.

The target populations of the Coastwise Shipping Survey and the Marine International Freight Origin Destination Survey are all ships that carry cargo between Canadian ports or between Canadian ports and foreign ports.

The Coastwise Shipping Survey population is somewhat different from the target population. It consists of ships engaged in domestic shipping at Canadian ports, with the exception of:

- i. cargo vessels less than 15 net register tons (NRT);
- ii. tugs or other vessels under 15 gross register tons (GRT);
- iii. Canadian naval ships;

1. For more information see Coastwise Shipping Survey: www.statcan.ca/english/sdds/2751.htm and International Freight Origin Destination Survey: www.statcan.ca/english/sdds/2791.htm.

- iv. fishing vessels;
- v. research vessels;
- vi. ballast movements for towboat and ferry operators on the West Coast ports;
- vii. cargo carried in trucks and rail cars on domestic vehicle ferries.

This limited survey field may have a significant impact on the statistics reported for some commodities, regions and ports such as the Pacific Coast, where a number of tugs that are under the GRT threshold are engaged in the towing of log booms. The exclusion of ferry traffic will also affect the statistics for cargo transported to and from islands such as Newfoundland, Prince Edward Island and Vancouver Island. However, this cargo should be reflected in statistics collected for freight transported by the truck and rail modes.

The survey population for the Marine International Freight Origin Destination Survey includes vessels engaged in international shipping at Canadian ports with the exception of (i) fishing boats registered in Canada or abroad, (ii) maintenance and service ships such as icebreakers, (iii) research vessels and (iv) other non-commercial vessels such as hospital ships.

Data sources

Data for the Coastwise Shipping Survey are collected directly from the owners, operators, agents or officers of ships engaged in domestic shipping. The data are reported on one of two questionnaires, either the *S.1, Domestic Shipping Report* or the *S.4, Towboat and Ferry Operators Shipping Report*. The operators of cargo-carrying ships arriving and departing Canadian ports or marine terminals complete these reports for each such arrival and departure. The S.1 Report provides the following information: vessel name, country of registration, the vessel's gross and net registered tonnage, cargo description, tonnage and ports of loading and unloading. The S.4 Report is used only on the West Coast by operators of tugs, cargo barges and ferries for monthly reporting of coastal shipping. These operators do not report ballast movements. The S1 and S4 Reports are sent to Statistics Canada each month.

Information on international shipping is collected from the Advance Commercial Information (ACI) program & the A6 General Declaration and manifests required by the Canada Border Services Agency (CBSA) for each ship loading or unloading cargo in Canada that either originated in or is destined to a foreign country. Local CBSA employees send copies of these documents to Statistics Canada. In some cases, marine agents or port authorities send equivalent reports to Statistics Canada. The data provided by the ACI program & the Form A6 and its annexes provide information on: the vessel's name and country of registration, registered gross and net tonnage, and information such as the description of the cargo, tonnage containerizes information and ports where commodities will be loaded and unloaded. These variables constitute the database for statistics on international shipping.

Data quality

All statistical surveys are subject to errors. The total error of a survey is defined as the difference between the survey estimate and the actual value for the target population. Survey errors can be classified as "sampling" or "non-sampling" errors. The marine transport surveys are censuses and are therefore not subject to sampling errors.

There are four main types of non-sampling errors:

- i. Coverage errors (when the survey frame does not thoroughly cover the target population);
- ii. Response errors (when a respondent provides inaccurate information);
- iii. Non-response errors (when a respondent does not respond to all or part of the questionnaire) and,
- iv. Processing errors (errors made during data capture, coding, and editing).

The Coastwise Shipping Survey is thought to be more affected by coverage errors than the Marine International Freight Origin Destination Survey. The survey population is smaller than the target population due to the size threshold and the various ship types that are exempted (e.g., vehicle and rail ferries) and the practical difficulty of identifying the fleet of all ships that are active in the domestic transport of cargo. With respect to the Marine International Freight Origin Destination Survey, customs rules apply to all ships arriving from or departing for foreign ports. However, Statistics Canada has only limited tools for identifying missing shipping documents.

Both surveys have significant exposure to response error, particularly in terms of the reported commodities. The marine carrier of domestic and international cargo is not always able to provide descriptions that are sufficiently detailed to accurately code the commodity. Terms such as general cargo are often used in cases where the carrier is unsure of the exact contents of a container or when there are a number of commodities being transported in one shipment. As result, residual categories such as “Other manufactured and miscellaneous goods” and “Other chemical products and preparations” may be overestimated while the true commodity is understated. Respondents may also use incorrect conversion factors in estimating the weight of a shipment.

Non-response errors are expected to have more of an effect on the Coastwise Shipping Survey. Shipping reports are not submitted for all vessel traffic Canadian ports. It is known that there is a significant amount of under-reporting for the Pacific Coast and the Mackenzie River. While it is assumed that the reporting to the Canada Border Services Agency (CBSA) of international traffic is fairly comprehensive, there are occasions when reports are not forwarded to Statistics Canada, particularly for ports in the Canadian Arctic and other remote areas that do not have local customs offices.

Both surveys are subject to processing errors during data entry, including errors in transcribing and coding information and in converting cargo quantities from non-weight units (e.g., barrels or cubic metres to kilograms). Errors may also be introduced during editing and imputation procedures that are used to correct data that appear to be erroneously reported or partially reported. A number of techniques are used to detect and resolve these errors including micro and macro analysis of the data for congruency and consistency with information acquired from other sources (e.g., cargo statistics from port authorities and economic statistics from other Statistics Canada divisions).

Appendix I

Glossary

Terms related to reporting forms

Advance Commercial Information (ACI): The Canada Border Services Agency (CBSA) introduced the ACI program to replace, at the first port of call, A6/A6A paper reporting with electronic reporting of key variables for vessels arriving from any port outside Canada. These include such information as name and nationality of vessel, net and gross register tonnage, last port of call and cargo particulars such as tonnage unloaded and handling port. The program was implemented in two phases. Phase 1 was implemented in April 2004 and applied to cargo loaded at foreign ports, excluding the United States. Cargo loaded in the United States was required to be reported using ACI beginning in July 2006.

A6 General declaration: This is an administrative document which is submitted along with supporting cargo reports to the Canada Border Services Agency (CBSA). The document should be completed for every vessel arriving from outside Canada or departing for any port or place outside Canada with the exception of those required to report using ACI. The A6 General Declaration provides such information as name and nationality of vessel, net and gross register tonnage, next/last port of call, and cargo particulars such as tonnage loaded or unloaded, and handling port.

S.4 Towboat and ferry operators shipping report: This report is used principally by members of the British Columbia Council of Marine Carriers to report the domestic shipping activities of tug, barge, scow and ferry operators on the west coast. The report is filed on a monthly basis and excludes ballast movements.

S.1 Domestic shipping report: This report is completed by ships' officers or operators of vessels engaged in domestic shipping arriving at or departing from Canadian ports. It contains such information as: vessel name, net and gross register tonnage, commodity description and tonnage, ports of loading and unloading. This is the principal source of data for the production of domestic shipping statistics.

Terms related to cargo

Ballast movement (arrival or departure): An arrival at a port is considered ballast if there is no cargo unloaded from the vessel at that port. A departure from a port is considered ballast if there is no cargo loaded on the vessel at that port. Ferry (passenger and cars) movements also count as ballast movements since there is no loading/unloading of commercial cargo.

Commodity: Cargo loaded or unloaded is classified according to a structure based on Statistics Canada's Standard Classification of Transported Goods (SCTG).

Lightering: This term refers to the loading/unloading of cargo in a harbour rather than at a dock or wharf. Cargo tonnage is included with port totals.

In-transit cargo: Foreign cargoes handled at Canadian ports en route for or from a third country. Since tonnages are included in port totals, the statistics do not necessarily reflect import and export tonnages, but are rather focused on port activity.

Terms related to ports

Destination: The port of unloading of cargo is considered the port of destination. This is not necessarily the point of ultimate destination of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of unloading and not necessarily the ultimate country of destination.

Origin: The port of loading of cargo is considered the port of origin. This is not necessarily the point of actual origin of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of loading and not necessarily the actual point of origin.

Handling port: The Canadian port of loading/unloading of cargo. This does not necessarily coincide with the Customs Port, or the municipality of the same name.

Atlantic region: This region consists of Canadian ports on the Atlantic Ocean and Arctic Waters, and that portion of the Gulf of St. Lawrence which is east of the inland waters as defined in the Canadian Shipping Act.

Great Lakes region: This region consists of Canadian ports located along the St. Lawrence river west of the Ontario-Quebec border, and on the Great Lakes.

Pacific region: This region consists of Canadian ports located on the Pacific Coast and the Mackenzie River.

St. Lawrence River region: This region consists of Canadian ports located on the St. Lawrence river from the Ontario-Quebec border eastward, along the north shore to 63° west longitude and along the south shore to Cap des Rosiers.

Terms related to vessels

Gross register tonnage: The capacity in cubic feet of the spaces within the hull and of the enclosed spaces above the deck of a vessel, divided by 100. This is the figure as reported on the A6 General Declaration or the S1 and S4 reporting forms.

Net register tonnage: The gross register tonnage (as defined above) minus the capacity utilized by propelling machinery, fuel, and personnel accommodation.

In ballast: A vessel is considered arriving or departing "in ballast" if no cargo is loaded when leaving a Canadian port or no cargo is unloaded when arriving at a Canadian port.

LO LO: an acronym for "lift on, lift off". System of loading and discharging whereby cargo is lifted on and off a ship by the use of cranes.

RO RO: An acronym for "roll on, roll off". System of loading and discharging a ship whereby the cargo is driven on and off.
