#### Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

## **User information**

#### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published
- significantly different from reference category (p < 0.05)</li>

#### **Note on CANSIM**

Data that appears in the **The Consumer Price Index** (catalogue no. 62-001-X) are also available electronically in our CANSIM (Canadian Socio-Economic Information Management System) database through the Internet tables 326-0009, 326-0012, 326-0015, 326-0020, 326-0021 and 326-0022, at a cost of \$3.00 per series. In general, *CANSIM* provides a longer historical series. For further information on *CANSIM* call 1-800-263-1136.

Statistics Canada has updated the basket of goods and services used in the calculation of the Consumer Price Index (CPI). This update was implemented with the release of the May 2011 CPI data, on June 29, 2011.

The weights, as with previous updates, are based on information derived primarily from Statistics Canada's Survey of Household Spending (SHS). The new weighting pattern is based on 2009 consumer expenditures and replaces the 2005 weights. The CPI's time base remains 2002 = 100.

For more information, please refer to survey number: 2301

## **Briefing notes**

#### Highlights:

· Consumer prices rose 2.7% in the 12 months to July, primarily the result of higher prices for gasoline and food purchased from stores. This follows a 3.1% increase in June and a 3.7% increase in May. On a seasonally adjusted monthly basis, consumer prices rose 0.1% in July.

#### All-items Consumer Price Index (CPI):

- On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in Ontario and British Columbia. As well, Nova Scotia increased its HST by two percentage points. July 2011 marks the first month for which the calculation for the 12-month rate of change in consumer prices compares two months which both include the July 2010 tax changes.
- Energy prices advanced 12.9% during the 12 months to July, following a 15.7% increase in June. On a year-over-year basis, gasoline prices increased 23.5%, compared with the 28.5% gain in June. In contrast, natural gas prices fell.
- Food prices rose 4.3% in the 12 months to July, matching the increase in June.
- Excluding food and energy, the Consumer Price Index (CPI) increased 1.2% in the 12 months to July, after increasing 1.4% in June.
- On a seasonally adjusted monthly basis, consumer prices increased 0.1% from June to July, following a 0.3% decrease from May to June. The transportation index, which includes gasoline, remained unchanged following a 2.4% decline in June. The seasonally adjusted food index continued to rise in July, increasing 0.5% after increasing 0.3% in June. The shelter index rose 0.4% while the recreation, education and reading index increased 0.2%.

#### Main contributors to the 12-month change in the CPI:

Main upward contributors:

- Gasoline (+23.5%)
- Passenger vehicle insurance premiums (+4.4%)
- Food purchased from restaurants (+2.2%)
- Meat (+5.5%)
- Fresh vegetables (+12.3%)

Main downward contributors:

- Mortgage interest cost (-1.9%)
- Purchase of passenger vehicles (-1.0%)
- Video equipment (-13.0%)
- Natural gas (-3.3%)
- Furniture (-2.7%)

#### Main contributors to the monthly change in the CPI, not seasonally adjusted:

Main upward contributors:

- Electricity (+3.1%)
- Traveller accommodation (+8.0%)
- Fresh fruit (+6.6%)
- Men's clothing (+2.4%)
- Potatoes (+15.5%)

Main downward contributors:

- Gasoline (-0.5%)
- Air transportation (-1.9%)
- Women's clothing (-1.4%)
- Purchase of passenger vehicles (-0.3%)
- Children's clothing (-4.6%)

#### Twelve month and monthly percentage change in the most quoted indexes, not seasonally adjusted

	12-month percentage change		Monthly percentage change	
	June 2010 to June 2011	July 2010 to July 2011	May 2011 to June 2011	June 2011 to July 2011

of Canada definition)	1.3	1.6	-0.6	0.2
All-items CPI excluding energy	1.9	1.7	-0.4	0.2
All-items CPI excluding food and energy	1.4	1.2	-0.6	0.0
Goods	3.8	3.5	-1.4	0.1
Services	2.6	2.1	0.1	0.2

# **Analysis**

Consumer prices rose 2.7% in the 12 months to July, primarily the result of higher prices for gasoline and food purchased from stores. This follows a 3.1% increase in June and a 3.7% increase in May.

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in Ontario and British Columbia. As well, Nova Scotia increased its HST by two percentage points. July 2011 marks the first month for which the calculation for the 12-month rate of change in consumer prices compares two months which both include the July 2010 tax changes.

Chart 1 The 12-month change in the CPI and the CPI excluding food and energy

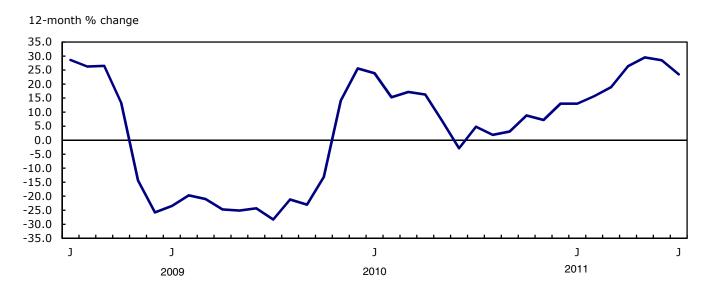

Energy prices advanced 12.9% during the 12 months to July, following a 15.7% increase in June. On a year-over-year basis, gasoline prices increased 23.5%, compared with the 28.5% gain in June. In contrast, natural gas prices fell.

Food prices rose 4.3% in the 12 months to July, matching the increase in June.

Excluding food and energy, the Consumer Price Index (CPI) increased 1.2% in the 12 months to July, after increasing 1.4% in June.

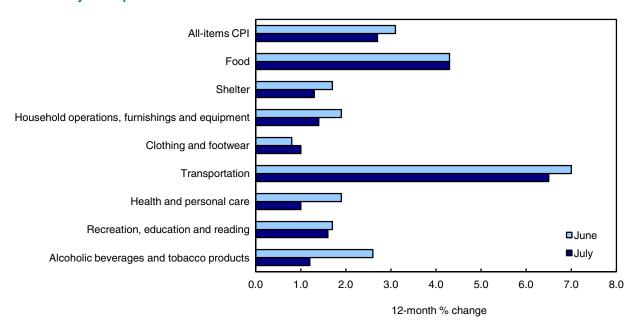

Chart 2
The 12-month change in the gasoline price index since July 2008

#### 12-month change: Prices for most major components increase at a slower rate

On a year-over-year basis, prices for most major components increased at a slower rate in July. The changes in the transportation index and the food index were the main contributors to the increase in the CPI.

Chart 3
Prices for most major components increase at a slower rate

The cost of transportation rose 6.5% in the 12 months to July, following a 7.0% gain in June. In addition to paying more for gasoline, consumers paid more in passenger vehicle insurance premiums and for air transportation. Prices for the purchase of passenger vehicles fell 1.0%.

While the increase in food prices remained unchanged, prices for food purchased from stores rose 5.1% in the 12 months to July after increasing 4.8% in June. Compared to July 2010, consumers paid more in July 2011 for meat, fresh vegetables, bakery products, and fresh fruit. They also paid 2.2% more for food purchased from restaurants.

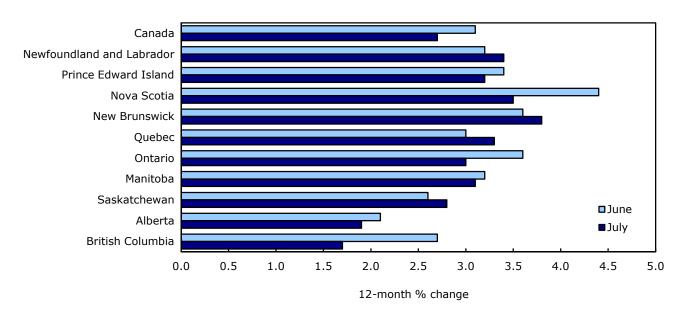

Shelter costs rose 1.3% in the 12 months to July, following a 1.7% increase in the previous month. In addition to fuel oil, consumers paid higher prices for homeowners' replacement cost, and homeowners' home and mortgage insurance. They paid less in mortgage interest cost (-1.9%) and for natural gas (-3.3%).

#### Provinces: Prices increase at a slower rate in several provinces

In the 12 months to July, consumer prices increased at a slower pace than in the previous month in several provinces.

On a year-over-year basis, price increases ranged from 1.7% in British Columbia to 3.8% in New Brunswick. In most provinces, higher gasoline prices were the main contributors to the increase. Price increases for food purchased from stores were also an important factor in several provinces.

Chart 4 Prices increase at a slower rate in several provinces

In Ontario, consumer prices rose 3.0% in the 12 months to July, after rising 3.6% in June. Gasoline prices rose 25.5%, prices for food purchased from stores went up 6.3% and prices for passenger vehicle insurance premiums increased 8.1%. Prices for electricity fell.

Consumer prices in Quebec increased 3.3%, following a 3.0% gain in June. Consumers paid more in July 2011 than a year earlier for gasoline (+27.6%), for food purchased from stores (+4.3%), and for food purchased from restaurants.

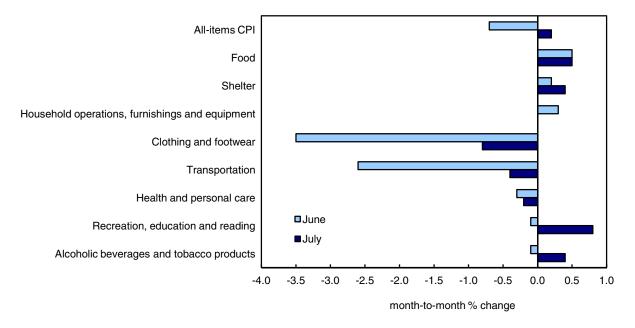

In British Columbia, prices rose 1.7% in the 12 months to July, following a 2.7% increase in June. Gasoline prices rose 13.1%, while prices for food purchased from stores increased 4.9%. Consumers in the province also paid more in homeowners' home and mortgage insurance. Food purchased from restaurants increased 2.3% after rising 8.8% in June.

In Alberta, prices advanced 1.9% in July, after increasing 2.1% in June. Consumers paid 23.0% more for gasoline and 4.1% more for food purchased from stores. The cost of homeowners' home and mortgage insurance also went up.

#### Non-seasonally adjusted monthly CPI

Consumer prices, before seasonal adjustment, increased 0.2% from June to July, following a 0.7% fall the month before. On a monthly basis, prices increased in four of the eight major components. Prices for shelter and food, as well as for recreation, education and reading all increased. Conversely, prices for transportation and for clothing and footwear decreased.

Chart 5 Non-seasonally adjusted monthly change in the eight major components

The shelter index went up 0.4% in July after increasing 0.2% in June. Electricity prices, homeowners' replacement cost, and prices for natural gas all increased.

Food prices rose 0.5% in July, matching the increase in June. Prices for food purchased from stores rose 0.8% in July, after increasing 0.5% in the month before. Consumers paid more for fresh fruits and potatoes.

Prices for recreation, education and reading rose 0.8% in July, after decreasing 0.1% in June. Prices for traveller accommodation increased 8.0%.

Transportation costs decreased 0.4% in July, after decreasing 2.6% in June. Prices for gasoline went down 0.5% following a 3.7% decrease in June. The cost of purchasing passenger vehicles fell 0.3% in July, following a 4.7% decrease the previous month.

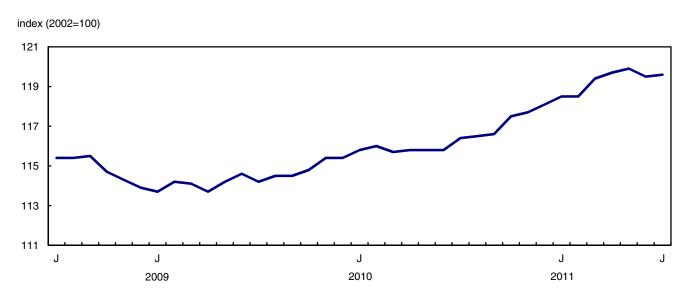

Prices for clothing and footwear declined 0.8% in July, after decreasing 3.5% in June. Consumers paid less for women's clothing and children's clothing while prices for men's clothing increased.

At the provincial level in July, prices increased in most provinces. The largest month-over-month increases were observed in Newfoundland and Labrador (+0.6%), followed by New Brunswick (+0.3%) and Alberta (+0.3%). Manitoba was the only province posting a decrease (-0.3%).

#### Seasonally adjusted monthly CPI increases

On a seasonally adjusted monthly basis, consumer prices increased 0.1% from June to July, following a 0.3% decrease from May to June. The transportation index, which includes gasoline, remained unchanged following a 2.4% decline in June.

Chart 6 Seasonally adjusted monthly Consumer Price Index increases

The seasonally adjusted food index continued to rise in July, increasing 0.5% after increasing 0.3% in June. The shelter index rose 0.4% while the recreation, education and reading index increased 0.2%.

#### Bank of Canada's core index

The Bank of Canada's core index advanced 1.6% in the 12 months to July, following a 1.3% gain in June.

On a month-over-month basis and before seasonal adjustment, the core index increased 0.2% in July, after decreasing 0.6% in June.

The seasonally adjusted monthly core index increased 0.3% in July, after declining 0.3% in June.

## **Explanatory notes for tables**

## Table 1 The Consumer Price Index, major components and special aggregates, Canada, not seasonally adjusted

#### and

## Table 2 The Consumer Price Index, major components and special aggregates, Canada, seasonally adjusted

- 1. 2009 Consumer Price Index (CPI) basket weights at April 2011 prices, Canada.
- 2. Figures may not add to 100% due to rounding.
- The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' For additional information on core CPI, please consult the Bank of Canada Web site: http://www.bankofcanada.ca/rates/price-indexes/cpi.

## Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Igaluit, not seasonally adjusted

Data for Igaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Igaluit formed part of the Northwest Territories. On April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

## Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

#### Table 4-2

- In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
- 2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.

#### Table 4-5

In previous years, Statistics Canada updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. Since 2008, this quality adjustment exercise is reflected in the month of May for all provinces.

#### Table 4-7

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

## Table 5 The Consumer Price Index for Canada, all-items CPI, not seasonally adjusted, historical data

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

## Table 6 Core Consumer Price Index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

- 1. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: http://www.bankofcanada.ca/rates/price-indexes/cpi.
- 2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

# Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

- 1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
- 2. A service in the Consumer Price Index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
- 3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
- 4. The annual index level is the average of the 12 individual monthly indexes.

### Table 8 Annual average percentage changes for the Consumer Price Index

#### Table 8-1 and 8-2

The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

## Table 9 The Consumer Price Index, major components, selected sub-groups and special aggregates, provinces, Whitehorse and Yellowknife, not seasonally adjusted

### Tables 9-1, 9-2, 9-3, 9-4, 9-5, 9-7, 9-8, 9-9, 9-10 and 9-11

- The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
- In previous years, Statistics Canada updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. Since 2008, this quality adjustment exercise is reflected in the month of May for all provinces.

#### Table 9-6

- The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
- 2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.
- In previous years, Statistics Canada updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. Since 2008, this quality adjustment exercise is reflected in the month of May for all provinces.

#### **Table 9-12**

- The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
- Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items Consumer Price Index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
- In previous years, Statistics Canada updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. Since 2008, this quality adjustment exercise is reflected in the month of May for all provinces.

## Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Igaluit, not seasonally adjusted, historical data

- 1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. On April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
- The annual index level is the average of the 12 individual monthly indexes.

# Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

- With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
- 2. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

## Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

- With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

- 3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

### Table 14 Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

#### Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

## Table 15 Inter-city indexes of retail price differentials, as of October 2009, for selected groups of consumer goods and services

#### **Purpose and Scope**

Table 15 shows estimates of retail price differences between 11 Canadian cities in all 10 provinces, as of October 2009. These estimates are based on a selection of commodities (goods and services) purchased by consumers in each of the 11 cities.

These estimates should not be interpreted as a measure of differences in the cost-of-living between cities. The indexes provide price comparisons for a selection of commodities only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities (see below).

#### Methodology

In order to produce optimal Inter-city indexes, commodity comparisons were initially made by pairing cities that are in close geographic proximity. The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure. The following initial pairings were used:

St. John's Halifax Charlottetown-Summerside Halifax Saint John Halifax Halifax Ottawa Montréal Toronto Ottawa Toronto Toronto Winnipeg Winnipeg Regina Edmonton Winnipeg Vancouver Edmonton

Reliable Inter-city price comparisons require that the selected commodities be very similar across cities. This ensures that the variation in index levels between cities is due to pure price differences and not to differences in the attributes of the commodities, such as size and/or quality.

Within each city pair, commodity price quotes were matched on the basis of detailed descriptions. Whenever possible, commodities were matched by brand, quantity and with some regard for the comparability of retail outlets from which they were selected.

Additionally, the target prices for this study are final retail prices and as such, include all sales taxes and levies applied to consumer commodities within a city. This can be an important source of variation when explaining differences in inter-city price levels.

It should be noted that price data for the Inter-city indexes is drawn from the sample of monthly price data collected for the Consumer Price Index (CPI). Given that the CPI sample is optimized to produce accurate price comparisons through time, and not across regions, the number of matched price quotes between cities can be small. It should also be noted that, especially in periods when prices are highly volatile, the timing of the commodity price comparison can significantly affect city-to-city retail price relationships.

The weights used for aggregating the city indexes into the all-items Inter-city index are based on the expenditures of consumers living in each of the 11 cities. The weights are currently based on 2005 consumer expenditure data.

The all-items Inter-city index for a particular city is compared to the average of all 11 cities, which is equal to 100. For example, an index value of 102 for a particular city means that prices for the measured commodities are 2% higher than the weighted, combined city average.

#### Additional Information on Shelter

Shelter prices were absent from the Inter-city index program prior to 1999 because of methodological and conceptual issues associated with their measurement. The diverse nature of shelter means that accurate matches between cities are often difficult to make.

To account for some of these difficulties, a rental equivalence approach is used to construct the Inter-city price indexes for owned accommodation. Such an approach uses market rents as an approximation to the cost of the shelter services consumed by homeowners in each city. It is important to note that this approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities.

#### **Footnotes for Table 15**

- The weights shown are rounded 2005 basket weights at April 2007 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2009.
- 2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.

## Data quality, concepts and methodology

#### **Definition**

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2009. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

### Population coverage

The population targeted by the CPI consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

#### Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

### Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

### Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

### Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2011, the basket reflecting the 2009 expenditure patterns replaced the 2005 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2009 basket as it was reflected in the CPI in May 2011 and the 2005 basket. Because both sets of weights are expressed in April 2011 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Consumer Prices Division.

Text table 1
Comparison of the 2009 and 2005 distribution¹ of expenditures used in the Consumer Price Index, by major component, for Canada

	2009 Expenditu	res	2005 Expenditures					
	Expressed in 2009 prices	Expressed in April 2011 prices	Expressed in April 2011 prices					
	percent							
Major Components								
All-Items CPI	100.0	100.0	100.0					
Food	16.1	16.0	18.0					
Shelter	27.5	27.5	26.7					
Household operations, furnishings and equipment	11.8	11.6	11.0					
Clothing and footwear	5.6	5.3	4.8					
Transportation	19.3	20.6	19.8					
Health and personal care	5.0	5.0	4.8					
Recreation, education and reading	11.8	11.2	11.8					
Alcoholic beverages and tobacco products	3.0	2.9	3.1					

<sup>1.</sup> Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. http://www.bankofcanada.ca/rates/price-indexes/cpi

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through CANSIM, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

## Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

#### Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

## Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-12 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.
