## How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website at [www.statcan.gc.ca](http://www.statcan.gc.ca), e-mail us at [infostats@statcan.gc.ca](mailto:infostats@statcan.gc.ca), or telephone us, Monday to Friday from 8:30 a.m. to 4:30 p.m., at the following numbers:

### Statistics Canada's National Contact Centre

Toll-free telephone (Canada and the United States):

Inquiries line	1-800-263-1136
National telecommunications device for the hearing impaired	1-800-363-7629
Fax line	1-877-287-4369

Local or international calls:

Inquiries line	1-613-951-8116
Fax line	1-613-951-0581

### Depository Services Program

Inquiries line	1-800-635-7943
Fax line	1-800-565-7757

## To access this product

This product, Catalogue no. 62-011-X, is available free in electronic format. To obtain a single issue, visit our website at [www.statcan.gc.ca](http://www.statcan.gc.ca) and browse by "Key resource" > "Publications."

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed *standards of service* that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on [www.statcan.gc.ca](http://www.statcan.gc.ca) under "About us" > "The agency" > "Providing services to Canadians."

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- P preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- \* significantly different from reference category ( $p < 0.05$ )

## Note on CANSIM

Data that appears in the **Industry Price Indexes** (catalogue no. 62-011-X) are also available electronically in our CANSIM (Canadian Socio-Economic Information Management System) database through the Internet tables 329-0056 to 329-0068 and 330-0007, at a cost of \$3.00 per series. In general, *CANSIM* provides a longer historical series. For further information on *CANSIM* call 1-800-263-1136.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

## Acknowledgements

This publication was prepared under the direction of:

- **André Loranger**, Director, Producer Prices Division
- **Leon Comeau**, Chief, Production, Goods and Construction Prices Section

**Appendix**

I Use of Link factors for IPPI and RMPI	170
---	-----

## Highlights

---

- In June, the IPPI decreased 0.3%, led by lower prices for petroleum and coal products.
- The decline of 2.8% in petroleum and coal products prices for June followed a decrease of 0.9% in May and is the second consecutive decline.
- Primary metal product prices (-1.3%) contributed more modestly to the IPPI decline in June. More precisely, nickel prices decreased 9.2% due to lower demand and increased supply.
- The IPPI decline in June was moderated by higher prices for motor vehicles and other transport equipment (+0.5%), chemical products (+0.6%) and paper and paper products (+0.5%). These price increases were mainly attributable to 0.9% depreciation in the Canadian dollar against the American dollar.
- In June, excluding petroleum and coal products, the IPPI would have edged up 0.2% after 0.1% decreases in April and May.
- The IPPI rose 5.2% in June compared with the same month a year earlier, mainly as a result of higher prices for petroleum and coal products (+30.2%) and primary metal products (+13.3%).
- The 6.3% year-over-year appreciation of the Canadian dollar relative to the US dollar dampened the IPPI advance in June. Without the exchange rate, the IPPI would have risen 6.5% instead of 5.2%.
- The RMPI decreased by 2.2% in June relative to May 2011, led mainly by crude mineral oils (-5.3%) and to a lesser extent by non-ferrous metals (-0.5%).
- The RMPI decrease in June was dampened by an increase in the price of vegetable products (+4.6%).
- Excluding mineral fuels, the RMPI would have decreased 0.5% in June.
- Compared with the same month a year earlier, the RMPI was up 23.0% in June, following an upward trend observed since November 2009.

## Industrial product and raw materials price indexes

The Industrial Product Price Index (IPPI) decreased 0.3% in June compared with May, led by lower prices for petroleum and coal products. The Raw Materials Price Index (RMPI) fell 2.2% as a result of lower prices for mineral fuels.

The IPPI was down for the second consecutive month, falling 0.3% in June. The decrease was a result of lower prices for petroleum and coal products (-2.8%) and primary metal products (-1.3%). The decline was moderated by higher prices for motor vehicles and other transportation equipment (+0.5%), chemicals and other chemical products (+0.6%) and pulp and paper products (+0.5%).

The 2.8% drop in petroleum and coal products prices for June followed a 0.9% decrease in May. Lower gasoline prices (-4.3%) contributed the most to the decline in this commodity group. Primary metal products fell as a result of lower prices for nickel products (-9.2%) and primary steel products (-1.5%). Nickel prices declined as a result of lower demand for stainless steel and the expectation of increased supply from new nickel mine projects.

Worldwide prices for petroleum products were influenced by a number of factors in June. Continued demand by emerging economies and supply disruptions in North Africa pushed prices higher. However, in June, some OPEC nations unilaterally increased production and the International Energy Agency announced that it would release "strategic" stocks. These actions led to increased supply and a monthly decline in petroleum and coal product prices.

The expectation of increased worldwide supply of nickel from large and small-scale projects around the world, the recovery of production following strikes in Canada and growth of nickel pig iron in China have led to a decline of 9.2% in nickel prices in June, however, prices are still up 8.5% year-over-year.

Aluminum prices declined by 0.4% as several new plants came online around the world. The new plants are expected to exploit low-cost power sources reducing the costs of production. However, China's capacity may be restricted by efforts to reduce power consumption by the sector, possibly leading to the closure of older plants and longer timelines for the development of new ones. The decline in June is the first since November 2010.

Motor vehicle and other transportation equipment (+0.5%) prices increased as a result of the 0.9% depreciation of the Canadian dollar against the American dollar.

Some Canadian producers who export products are paid on the basis of prices set in US dollars. Consequently, the decline of the Canadian dollar in relation to the US dollar had the effect of increasing the corresponding prices in Canadian dollars. Without the impact of the exchange rate, the IPPI would have fallen 0.5% instead of 0.3%.

Excluding petroleum and coal products, the IPPI would have increased 0.2% in June following declines of 0.1% in April and May.

## 12-month change in the IPPI: The upward trend regains momentum

The IPPI rose 5.2% in June compared with the same month a year earlier, after advancing 4.5% in May. The June increase in the IPPI marks the 15th consecutive advance. Of the 21 major commodity aggregations, 15 rose while 6 decreased.

The year-over-year rise in the IPPI was driven mainly by a 30.2% increase in prices for petroleum and coal products, and further supported by primary metal products (+13.3%). Chemical and chemical products (+10.1%) also contributed to the year-over-year advance.

Prices in petroleum and coal products rose in all major aggregation groups, including increases in motor gasoline (+32.0%) and fuel oils, specifically diesel fuel (+34.7%).

The largest contributors to the rise in primary metal product prices since June 2010 were other non-ferrous metal products (+31.2%), copper and copper alloy products (+27.7%) and aluminum products (+14.2%). In the non-ferrous metals category, a 71.7% increase in silver and platinum prices was the largest contributor to the advance.

Year-over-year, fruit, vegetables, feeds and other food products (+6.8%) was driven primarily by increases in prepared feeds (+19.8%). Flour, wheat meal and other cereals rose 17.7% when compared with June 2010, which was the eleventh consecutive year-over-year increase. In June the index for this commodity was at its highest level in thirty-six months. Drought conditions in Eastern Europe and Central Asia in 2010 reduced the region's contribution to the world wheat supply by half, and reduced maize supply in the United States led to increased price levels for corn.

The increase in the prices of chemical and chemical products was influenced primarily by a 28.1% year-over-year rise in organic industrial chemicals. With the exception of synthetic resins (-2.0%), prices in all other subcategories in the chemicals and chemical products commodity group rose compared with June 2010.

Prices for motor vehicles and other transportation equipment (-3.0%) moderated the annual increase in the IPPI. Prices for motor vehicles and other transportation equipment are particularly sensitive to the exchange rate, and the year-over-year decline in prices in June continues a trend that began in October 2009.

The 6.3% year-over-year increase in the value of the Canadian dollar relative to the US dollar slowed the IPPI advance in June. Without the impact of the exchange rate, the IPPI would have risen 6.5% instead of 5.2% in June.

Excluding petroleum and coal prices, the year-over-year IPPI would have increased 2.4% in June, following a 1.4% advance in May. This continues the trend that began in May 2010.

### **Raw Material Price Index: Prices decline for a second month**

The Raw Materials Price Index (RMPI) decreased by 2.2% in June, following a 5.3% decline in May. Prior to May 2011, the RMPI posted seven consecutive increases. The index was pulled down primarily by lower prices for mineral fuels (-4.9%). Crude mineral oils declined 5.3% in June, following an 8.9% decrease in May. Lower prices for copper and nickel concentrates (-2.7%), iron and steel scrap (-2.6%) and cattle and calves for slaughter (-1.6%) also contributed to the monthly decline.

The monthly decrease in the RMPI was slightly moderated by higher prices for vegetable products (+4.6%), led by grains (+9.7%) and oilseeds (+3.2%).

Excluding mineral fuels, the RMPI would have increased by 0.5% in June compared to 2.0% in May.

Compared with the same month a year earlier, the RMPI was up 23.0% in June, following increases of 22.6% in April and 25.3% in May. Year-over-year increases in the RMPI have occurred since November 2009. The main contributor to the RMPI year-over-year increase was mineral fuels (+27.6%). Non-ferrous metals (+29.7%) and vegetable products (+43.9%) also contributed to the advance.

Year-over-year, excluding mineral fuels, the RMPI would have risen by 19.0% in June, following advances of 15.6% in April and 15.4% in May. Yearly increases in the RMPI excluding mineral fuels have been recorded since November 2009.

**Note to readers**

All data in this release are seasonally unadjusted and usually subject to revision for a period of six months (e.g., when the July index is released, the index for the previous January becomes final).

The **Industrial Product Price Index** (IPPI) reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including transportation, wholesale and retail costs.

Canadian producers export many goods. They often indicate their prices in foreign currencies, especially in US dollars, which are then converted into Canadian dollars. In particular, this is the case for motor vehicles, pulp, paper and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI. But the conversion into Canadian dollars only reflects how respondents provide their prices. Moreover, this is not a measure that takes into account the full effect of exchange rates, since that is a more difficult analytical task.

The conversion of prices received in US dollars is based on the average monthly exchange rate (noon spot rate) established by the Bank of Canada, and it is available on CANSIM in table 176-0064 (series v37426). Monthly and annual variations in the exchange rate, as described in the text, are calculated according to the indirect quotation of the exchange rate (for example, CAN\$1 = US\$X).

The **Raw Materials Price Index** (RMPI) reflects the prices paid by Canadian manufacturers for key raw materials. Many of those prices are set on the world market. However, as few prices are denominated in foreign currencies, their conversion into Canadian dollars has only a minor effect on the calculation of the RMPI.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 2002 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

**Table 3-2**  
**Industrial product price indexes by industry and industry groups 1, 2 — Food manufacturing**

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 2002 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 2002 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

2011	98.5	98.8	98.4	97.8	98.0	98.0	..	..	..	..	..	..	..

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 2002 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

**Table 3-16**  
**Industrial product price indexes by industry and industry groups 1, 2 — Fabricated metal product manufacturing**

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 2002 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 2002 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 2002 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

**Note(s):** Monthly prices are collected and processed three times per annum. The resulting indexes are released for April, August and December reference months of each year. Indexes for the current year and previous year are subject to revision."Statistics Canada is in the process of evaluating the Electric Power Selling Price Index program in order to determine its usefulness and whether it accurately reflects the current electricity market. As part of this evaluation, it is necessary to assess the data users' needs, the way the data is being used and the level of satisfaction with the program. If you would like to take part in this process, please contact us at [ppd-info-dpp@statcan.gc.ca](mailto:ppd-info-dpp@statcan.gc.ca) or at toll-free 1-888-951-4550 to receive a short form."

**Note(s):** Monthly prices are collected and processed three times per annum. The resulting indexes are released for April, August and December reference months of each year. Indexes for the current year and previous year are subject to revision."Statistics Canada is in the process of evaluating the Electric Power Selling Price Index program in order to determine its usefulness and whether it accurately reflects the current electricity market. As part of this evaluation, it is necessary to assess the data users' needs, the way the data is being used and the level of satisfaction with the program. If you would like to take part in this process, please contact us at [ppd-info-dpp@statcan.gc.ca](mailto:ppd-info-dpp@statcan.gc.ca) or at toll-free 1-888-951-4550 to receive a short form."

## Industrial Product Price Indexes (2002=100)

---

The Industrial Product Price Indexes (IPPI) measures price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 944 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 2002 Input-Output tables. Weights used to aggregate commodity indexes are taken from the output or “Make” matrix of the Input-Output tables of the Canadian System of National Accounts (SNA) which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (catalogue no. 11-001-X) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in tables 329-0056 to 329-0068 or by request.

Each release of index numbers is subject to revision for six months, (for example, when the July index is released, the index for the preceding January becomes final). Exceptions to this rule are announced.

### Price surveys

About 6,000 price quotes are collected monthly from about 1,700 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are “must take” respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 3 to 15 price quotes. An index may be derived from as few as 3 quotes or as many as 30 quotes.

Estimated percentage shares (by weight in the IPPI) of the collection methods used in the construction of the IPPI: Direct Mail survey (80%) Telephone Interviews (10%) Extraction of data from other sources (10%)

### Weight base

The composite indexes are weighted averages of the elemental indexes. For the IPPI, commodity and industry weights are taken from the output matrix of the 2002 Input-Output tables produced by the Industry Accounts Division of the Canadian System of National Accounts (SNA). These tables are derived from shipment values reported for the 2002 Annual Survey of Manufactures (ASM) and edited to conform to the industry classification (i.e. NAICS). However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns. The entire weighting scheme for the IPPI is generally revised every 5 years. The current time base and weight base is 2002=100.

## Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w^i$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

## Historical data

The historical series consist of all data for the months prior to January 2002. They were obtained by linking together indexes from the 2002-based IPPI series and the corresponding 1997-based IPPI series. These historical series were obtained by rebasing the 1997-based IPPI series using, as the rebasing factor, the ratio of 100 to the annual average index of 2002.

Historical series on the 2002 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 2002 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. A set of CANSIM vector *concordance tables* between both sets of IPPI series are available to the public.

## Raw Materials Price Indexes (2002=100)

---

The Raw Materials Price Indexes (RMPI) measures price changes for raw materials purchased by industries in Canada for further processing. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product. For example, wheat is considered as a raw material, but wheat flour is not; iron ore is but not pig iron; coal is but not electricity. Approximately 80 commodities are priced in the index, grouped into seven major components. For the RMPI, commodity weights are taken from the input matrix of the 2002 Input-Output tables of the Canadian System of National Accounts (SNA).

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

The index and the major group indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (catalogue no. 11-001-X) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in tables 330-0007 or by request.

Each release of index numbers is subject to revision for six months, (for example, when the July index is released, the index for the preceding January becomes final). Exceptions to this rule are announced.

### Price surveys

Data are collected directly from survey respondents, extracted from administrative files and derived from other Statistics Canada surveys and/or other sources. As a purchasers' price index, prices include all charges purchasers incur to bring a commodity to the establishment gate. They include transportation charges, net taxes paid, custom duties, as well as subsidies, if applicable.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are "must take" respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 3 to 15 price quotes. An index may be derived from as few as 3 quotes or as many as 30 quotes.

In the RMPI, approximately 34% of the data are collected by direct mail survey, 60% of the data from administrative sources and the remaining 6% from imputation, usually from a similar commodity at the next stage of processing.

### Weight base

The composite indexes are weighted averages of the elemental indexes. For the RMPI, commodity weights are taken from the input matrix of the 2002 Input-Output tables produced by the Industry Accounts Division of the Canadian System of National Accounts (SNA). These tables provide values at purchasers' prices of commodities purchased as intermediate inputs. Within individual commodity indexes, the prices are weighted according to their market share. If data are not available, the prices are equally weighted. Each December, product weights within a commodity index can be changed in order to reflect important changes in production patterns. The entire weighting scheme for the RMPI is generally revised every 5 years. The current time base and weight base is 2002=100.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(\text{agg})} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(\text{agg})}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

## Historical data

The historical series consist of all data for the months prior to January 2002. They were obtained by linking together indexes from the 2002-based RMPI series and the corresponding 1997-based RMPI series. These historical series were obtained by rebasing the 1997-based RMPI series using, as the rebasing factor, the ratio of 100 to the annual average index of 2002. A set of CANSIM vector *concordance tables* between both sets of RMPI series are available to the public.

## Electric Power Selling Price Indexes, Non-residential (1997=100)

---

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Producer Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in table 329-0050. Indexes for the current year and the previous year are subject to revision.

# Appendix I

---

## Use of Link factors for IPPI and RMPI

To convert a 2002-based index to a 1997 base, just look for the appropriate link factor in the following appendix tables and multiply the index of the 2002 based series by that factor. Expressed as a formula, the calculation is:

$$P_{t/02} \times f = P_{t/97}$$

where  $P_{t/02}$  is a 2002-based index,  $P_{t/97}$  is a 1997-based index and  $f$  is the link factor.

Conversely, to convert the 1997-based index to a 2002 base, just look for the appropriate link factor in the following appendix tables and divide the index of the 1997 based series by that factor. Expressed as a formula, the calculation is:

$$P_{t/97} \div f = P_{t/02}$$

Link factors are available upon request. Please contact Producer Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone 613-951-4550, toll-free: 1-888-951-4550, facsimile 613-951-3117, e-mail: [ppd-info-dpp@statcan.gc.ca](mailto:ppd-info-dpp@statcan.gc.ca).
