Don't hurry. It is best to keep your child in a booster seat as long as possible. Once he or she has outgrown a booster seat, you must make sure that the seat belt fits correctly.

SEAT BELTS

## HOW TO BUCKLE UP YOUR KIDS THE RIGHT WAY

THE WRONG WAY!

The lap belt should not rest on the stomach.

SHOULDER BELT
The shoulder belt should not be under the arm.

SHOULDER BELT
The shoulder belt should not be on the arm.

## SEAT BELTS

## Is your child tall enough for a seat belt?

Your child must be able to sit up straight, with his or her back against the back of your vehicle's seat. Your child's legs should be able to hang over the seat without slouching. Slouching makes the lap belt move up over the stomach, when it should be over the hips.

If your child can't sit in the right position, he or she is still too short for a seat belt and should stay in a booster seat for a while longer. If your child has outgrown his or her booster seat, you may be able to buy one that fits your child before switching to a seat belt.

NOT READY

The shoulder belt should not be on the child's neck.

LAP BELT
The lap belt should not rest on the stomach.

## When can your child sit in the front seat of the car?

Kids 12 and under should always be in the back seat. Most cars have front seat air bags, and these can hurt small children if the bags inflate during a crash or sudden stop. The safest place in the car for children is always in the back seat.

## IMPORTANT TIPS

- By law, kids must be buckled up in a child restraint made for their weight, height and age. Read your provincial/territorial regulations for details.
- Do not leave loose items in your vehicle during a trip, as they may hit and hurt someone in a sudden stop.
