

RENTAL MARKET REPORT

Calgary CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2012

Highlights

- The apartment vacancy rate in the Calgary CMA declined to 1.3 in October 2012, down from 1.9 per cent in October 2011.
- Average rent for a two-bedroom apartment unit was \$1,150 per month in October 2012.
- In rental structures common to both the 2011 and 2012 surveys, the year-over-year change in the average rent for a two-bedroom apartment in October 2012 was 5.9 per cent.
- The vacancy rate for row (townhouse) rentals was 0.9 per cent in 2012, down from 2.0 per cent a year earlier.

Calgary Rental Market Survey

Vacancy rates move lower in 2012

In the Calgary Census Metropolitan Area (CMA), the apartment vacancy rate¹ in October 2012 declined for the third consecutive year. Apartment vacancies averaged 1.3 per cent in CMHC's October survey, down from 1.9 per cent in the previous year. Employment growth and higher incomes, supported by Calgary's expanding economy, continued to attract migrants and increased demand for rental units. A reduction in the supply of rental units also contributed to lower vacancies this year.

The apartment vacancy rate in most zones in Calgary declined from the previous year. Areas close to the

downtown where there is a high concentration of employers continued to have among the lowest vacancy rates in the City. The vacancy rate in the Downtown zone reached 0.5 per cent in October 2012, down from 1.0 per cent in October 2011. Zones that experienced the largest change from the previous year were in the Northwest, Chinook and Other centres, declining 1.6, 1.8, and 2.2 percentage points, respectively.

In CMHC's 2012 October survey, vacancies for all apartment bedroom types declined from 2011. Three-or-more bedroom units reported the largest change, decreasing to 1.5 per cent in October 2012 from 3.3 per cent in October 2011. The vacancy rate for two-bedroom units also had a vacancy rate of 1.5 per cent, down 0.5 percentage points from a year earlier. Bachelor and one-bedroom units both had a vacancy rate of 1.1 per cent, representing a decline from 1.9

Figure 2

Source: CMHC, October Survey

¹ Based on privately-initiated rental apartment structures of three or more units.

Figure 3

Source: CMHC, October Survey

and 1.8 per cent from October 2011, respectively.

Vacancy rates for smaller structures declined from the previous year, while vacancies for larger structures remained relatively stable. The vacancy rate in structures of three-to-five units decreased from 3.3 per cent in October 2011 to 1.7 per cent in October 2012. Structures of three-to-five and six-to-nineteen recorded the largest decline in the vacancy rate compared to other structure sizes. Vacancies for structures between 50-to-99 units averaged 1.8 per cent, relatively unchanged from the previous year. Likewise, the vacancy rate for structures with 100 or more units also remained stable, averaging 1.2 per cent in October 2012.

Vacancies declined for all structure age ranges with the exception of structures built between 1990 and 1999. For apartment rental units constructed prior to 1960, the vacancy rate was 0.8 per cent in

October 2012, down from 2.8 per cent a year earlier. The vacancy rate for newer apartment rental units, which include units constructed in 2000 or later, declined from 3.4 per cent in 2011 to 1.8 per cent in 2012. Vacancies rose to two per cent among structures built between 1990 and 1999, up from 0.3 per cent in the previous year.

Average rents increase as vacancies decline

The strong demand for rental accommodations combined with lower vacancies has led to an increase in rental rates in Calgary. Same-sample rents² for all apartment units increased 6.1 per cent in October 2012, following a 1.8 per cent rise in the previous year. Bachelor units posted a gain of 7.4 per cent compared to 1.9 per cent in October 2011, while two-bedroom units recorded an increase of 5.9 per cent, also up from 1.9 per cent in the

previous year. The average same-sample rent for three-bedroom units increased 4.2 per cent from a year earlier. The two-bedroom rent in the Calgary CMA averaged \$1,150 in October 2012.

Average two-bedroom rents increased for most zones in the Calgary CMA compared to a year earlier. The Downtown and Beltline had among the highest average two-bedroom rents in the Calgary CMA at \$1,240 and \$1,222 in October 2012, respectively. In general, buildings in this zone are highly desired, especially from renters who work in the downtown area. As such, renters are willing to pay more to live in this area. The Southeast and Other Centres recorded the lowest two-bedroom rents averaging \$998 and \$1,005, respectively.

On a same-sample basis, the average rent for two-bedroom apartments rose in all zones in the Calgary CMA. In addition, for many of the zones, the rate of increase was stronger compared to a year earlier. For two-bedroom units, the average rent rose 5.9 per cent this October compared to 1.9 per cent in the previous year. The Northeast reported one of the largest increases at 8.6 per cent in October 2012, up from 1.5 per cent a year earlier. In the Beltline and Fish Creek, the same-sample average two-bedroom rent rose 6.6 and 6.7 per cent, respectively. Chinook had one of the lowest increases in the two-bedroom average rent at 3.5 per cent in 2012 after rising 4.7 per cent in 2011.

² When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2011 and 2012 October Rental Market Surveys, we can get a better indication of actual rent increases paid by most tenants.

Rental apartment universe declines in 2012

CMHC's 2012 October survey included 34,212 apartment rental units in the Calgary CMA, compared to 34,814 in 2011. The purpose-built rental apartment universe has been declining for years due to both permanent and temporary factors. Permanent changes include demolitions and condominium conversions, while temporary changes include units undergoing repairs or renovations. The decline in the rental apartment universe can mainly be attributed to condominium conversions outpacing the number of newly completed rental units. The Beltline had the largest rental apartment universe at 8,614 units, followed by the Downtown at 4,628 units, and the Northwest at 4,596 units. Unlike the other zones in the Calgary CMA, the rental apartment universe in Fish Creek and Other Centres did not experience a decline from the previous year. In the City of Calgary, the rental apartment universe was 33,775 units in October 2012, down 605 units from 34,380 units in October 2011.

Rental apartment construction has increased in 2012. Some developers have found an incentive to start more rental projects in the Calgary CMA as vacancies have moved lower and average rents have increased. After nine months, 346 market rental apartment units were started, up from four units during the same period in 2011. However, the introduction of these units may not result in any noticeable net gains to the

Figure 4

Source: CMHC, 12-month ending October

universe as rental apartment units are also removed every year due to condominium conversions. In the 12-month period ending October 2012, there were 203 condominium apartment conversions in 2012. This compares to 70 rental apartment completions during the same time.

Availability rates decline due to higher demand

The overall apartment availability rate³ in the Calgary CMA was 2.6 per cent in October 2012, down from 3.2 per cent in October 2011. The Southeast and Northeast zones reported the highest availability rate at 4.3 and 4.2 per cent, respectively. The largest change in the availability rate was in Chinook, declining 2.9 percentage points from 4.9 per cent in 2011 to two per cent in 2012. The availability rate was the lowest in Downtown, averaging 1.4 per cent compared

to three per cent in the previous year. Within the City of Calgary, the availability rate decreased from 3.2 per cent in October 2011 to 2.6 per cent in October 2012.

Row (townhouse) vacancies move lower

Along with rental apartment units, row units also saw vacancies decline from the previous year. In October 2012, the row vacancy rate as reported in CMHC's survey was 0.9 per cent in the Calgary CMA, down from two per cent in 2011. There were no vacancies in North Hill and Chinook while the Southwest had the highest vacancy rate at 2.6 per cent. North Hill and the Southeast experienced the largest change in the vacancy rate from a year earlier, declining 2.4 and 1.9 percentage points, respectively.

³ A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant. As the definition of availability includes vacancy, the availability rate will always be equal to or greater than the vacancy rate. The availability rate can provide some insight into rental market conditions as it reveals the intentions of landlords and tenants on a short-term basis.

Figure 5

Source: CMHC, October Survey

The Calgary CMA had 3,878 units in the row rental universe in October 2012 compared to 3,843 units in October 2011. The Northwest zone had the highest number of row rental units at 1,394, comparable to the previous year. Conversely, the zones that had the lowest number of units were the Downtown, Other Centres, and Beltline with zero, 10 and 16 units, respectively. The row rental universe in the Southwest zone had the largest increase from 190 units in 2011 to 228 in 2012, representing a rise of 38 units.

Row (townhouse) rents increase

Row rental rates for all bedroom types averaged \$1,137 in October 2012. The lowest average rents were in North Hill at \$954 per month compared to \$956 in October 2011. The Northeast and Chinook zones had among the highest average rents at \$1,190 and \$1,181, respectively.

On a same-sample basis, the overall average row rent rose 5.7 per cent from October 2011 to October 2012. Fish Creek witnessed the largest increase at 8.5 per cent, following a decline of two per cent in the previous year. Conversely, the Southeast had one of the lowest rental rate increases at 3.4 per cent.

Rental Market Outlook

Vacancies expected to remain low

The economy in Calgary is expected to sustain demand for rental units over the forecast period. Landlords and property owners will continue to see interest in their rental units in 2013 as employers expand their payrolls and as people look for a place to call home after moving from another region. Employment opportunities, high wages, and comparatively low unemployment rates will be one of many reasons that attract people to Calgary. The vacancy rate in October 2013 is forecast to remain below two per cent after reaching 1.3 per cent in October 2012. While vacancies in the purpose-built market remain relatively low, the secondary rental market will provide an alternative for tenants looking for a place to live as it has grown over the years.

Figure 6

Source: CMHC, October Survey

Due to low vacancies, fewer incentives will be needed to fill vacant units compared to previous years as demand for rental units remains elevated. As such, upward pressure on average rents is expected to extend into 2013. The rise in rental rates will also help landlords offset any rising maintenance costs. The average two-bedroom rent is forecast to increase \$50 per month from \$1,150 in October 2011 to \$1,200 in October 2012, reaching a new high.

Secondary Rental Market Survey

CMHC collects information on apartment rental condominium units, as well as the following types of units: rented single-detached houses, rented double (semi-detached) houses, rented freehold row/town houses, rented duplex apartments, rented accessory apartments, and rented apartments which are part of a commercial or other type of structure containing one or two dwelling units.

The methodology section at the end of this report provides more detailed information on the Secondary Rental Market Survey⁴.

Secondary Rental Market Survey: Condominium Apartments

Condominium vacancies decline in 2012

Vacancies for rental condominium apartments declined to 2.1 per cent

Figure 7

Source: CMHC, October Survey

in October 2012, down from 5.7 per cent in October 2011. Demand for rental accommodations in both the purpose-built as well as the secondary rental market has been supported by continued growth in Calgary's economy. The condominium apartment vacancy rate in the Core was 1.4 per cent, down from 5.7 per cent a year earlier. In the West and East areas, the rental condominium vacancy rate was 2.7 and 2.8 per cent, respectively.

Condominium average rents

The condominium rent in CMHC's 2012 survey averaged \$1,288 per month in October compared to \$1,378 in 2011. Condominium apartment rents are typically higher compared to units in the purpose-built rental market as the buildings are generally newer and may include additional amenities such as a fitness centre, entertainment room, and

heated underground parking. The West had an average condominium rent of \$1,163 in October 2012 while the East had an average rent of \$1,107 per month. The average condominium rent in the Core was \$1,471 in 2012 compared to \$1,521 a year earlier.

Condominium rental universe

The condominium apartment universe reached 47,156 units in 2012, up from 42,361 in 2011. The highest number of rental units was in the West at 22,631 units, followed by the Core at 18,797 units. Of the 47,156 units in the condominium rental universe, 30 per cent or 14,313 units were identified as rentals. This represents the highest percentage of rental units in the condominium apartment universe since 2006 when the survey was first introduced. The percentage of condominium rental units in the Core was 32 per cent in October 2012 compared to 28.2 per cent in

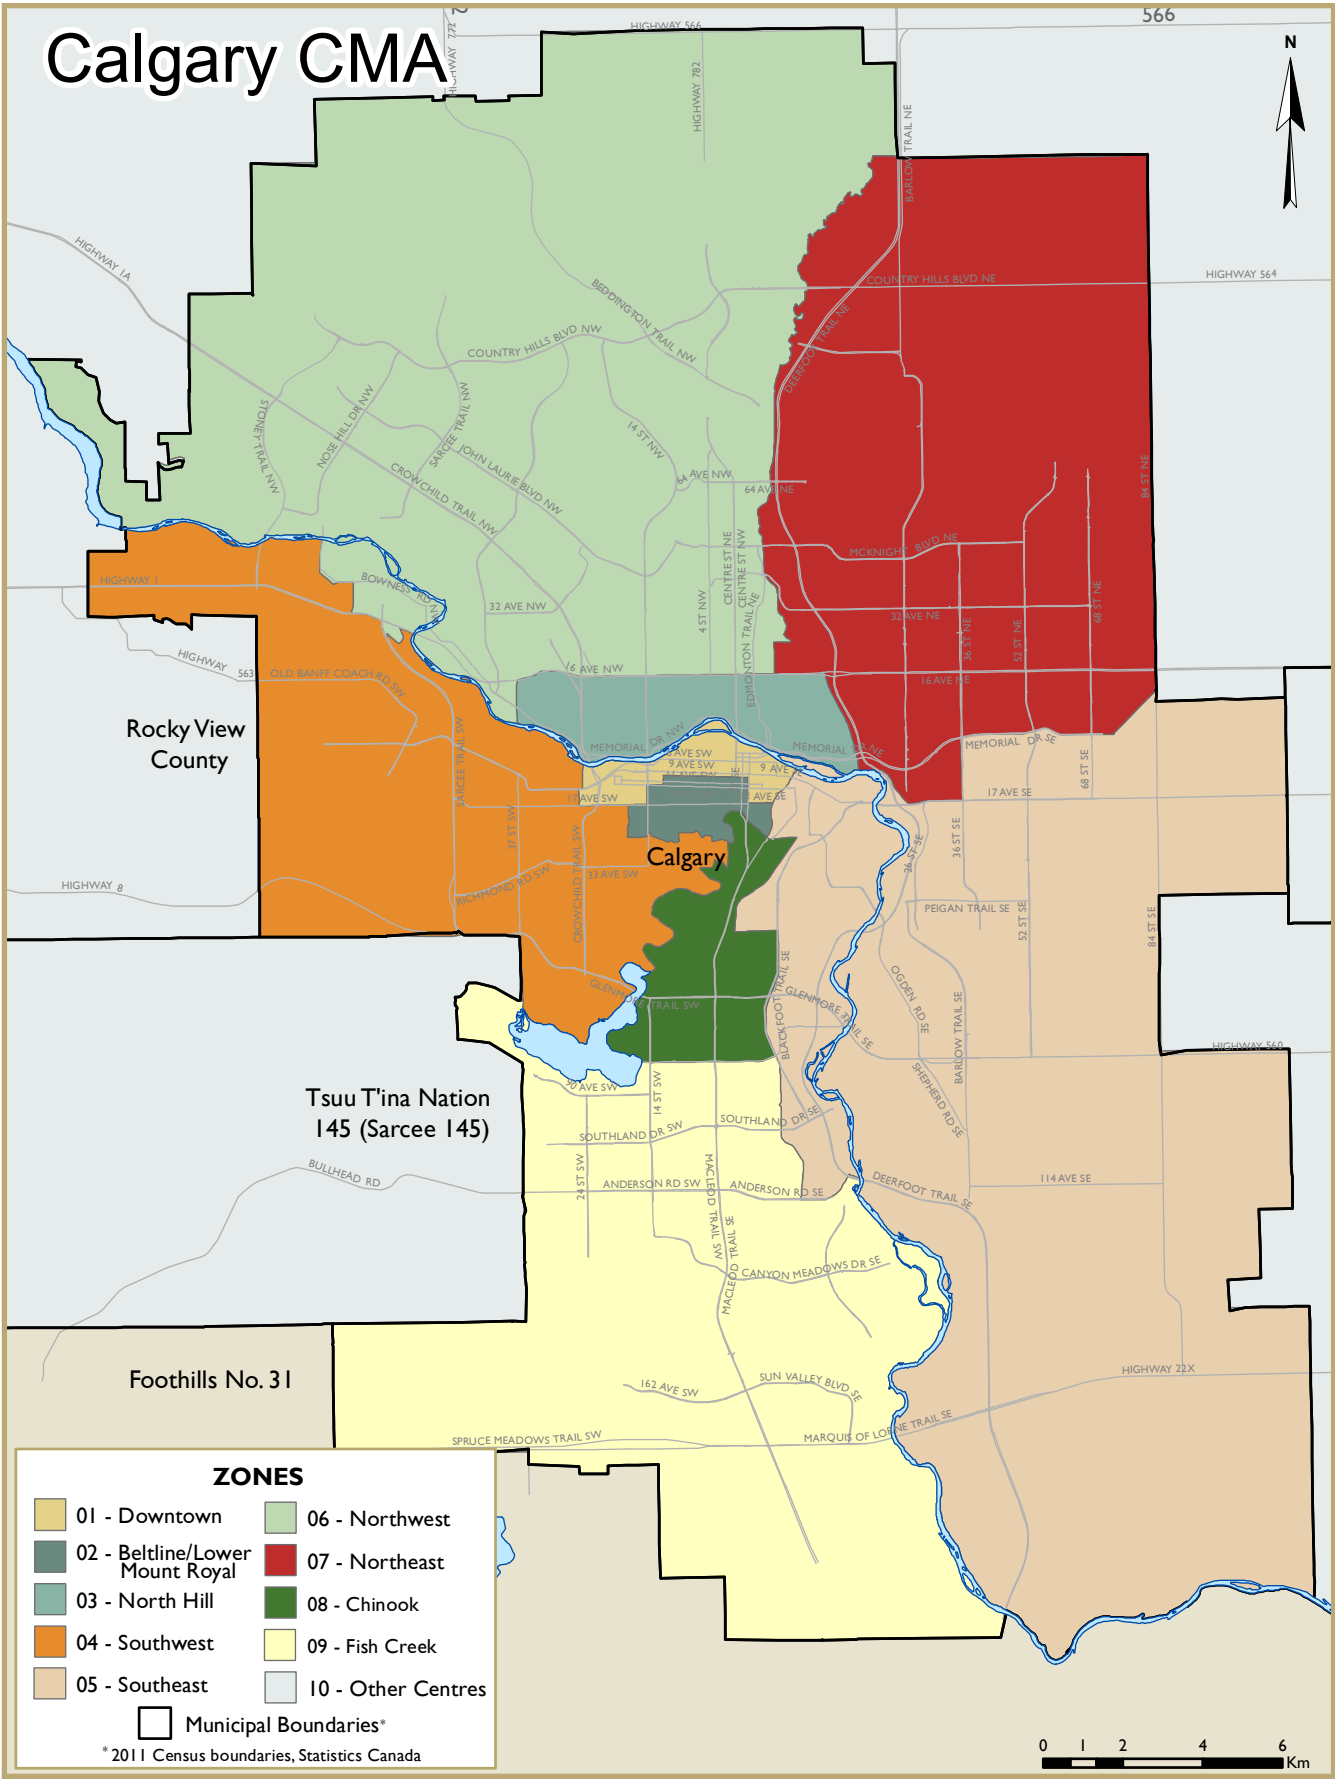

⁴ Readers are reminded to use caution when comparing data year-to-year in the Secondary Rental Market Survey since the type of dwellings surveyed and their characteristics can vary from one year to the next. Owners of these types of dwellings can, for example, shift them in and out of the rental market. Unlike structures in the RMS, which are purpose built for rental tenure, structures in the secondary rental market can be a rental structure one year and an owner-occupied structure the next.

October 2011. In the East, 22 per cent of the condominium universe was identified as rental units.

Secondary Rental Market Survey: Other Dwellings

CMHC's Secondary Rental Market Survey also collects information on households in rented single-detached houses, double (semi-detached) houses, freehold row/town houses, duplex apartments, accessory apartments, and apartments which are part of a commercial or other type of structure containing one or two dwelling units. The number of renter households in the other secondary rental market totalled 55,355 in October 2012 compared to 54,878 in 2011. Single-detached rented dwellings were estimated at 17,007 households while accessory suites reached 11,815 households. The largest segment of other secondary rental units was from the semi-detached, row, and duplex dwellings, amounting to 26,533 units collectively.

The overall average rent for all other secondary rental units in October 2012 was relatively unchanged from the previous year at \$1,151. The average rent for accessory suites was \$940, while semi-detached, row and duplex dwelling types averaged \$1,052 per month. Single-detached units recorded the highest average rent at \$1,465 compared to \$1,384 in October 2011.

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented is based on Statistics Canada's 2006 Census area definitions. October 2012 data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
