

RENTAL MARKET REPORT

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2012

Highlights

- The apartment vacancy rate across the Edmonton Census Metropolitan Area (CMA) decreased to 1.7 per cent in October 2012 from 3.3 per cent in October 2011.
- The average monthly rent for a two-bedroom apartment in new and existing structures in the Edmonton CMA was \$1,071 this October.
- In rental structures common to both the October 2011 and 2012 surveys, the average rent for a two-bedroom apartment increased by 3.8 per cent year-over-year.
- The average vacancy rate in row (townhouse) rental units decreased to 1.7 per cent this fall from three per cent in October 2011.

Edmonton Rental Market Survey

Apartment Vacancies Continued Downward

The apartment vacancy rate¹ across the Edmonton Census Metropolitan Area (CMA) decreased to 1.7 per cent in October 2012 from 3.3 per cent in October 2011. This is the third consecutive year where the apartment vacancy rate in Edmonton declined. Strong net migration into Alberta and high employment numbers in the Capital region contributed to the reduction in vacant rental apartments, as did a modest reduction in the supply of rental units.

With apartment vacancies trending downward across the Edmonton CMA, average rents moved upward. In October 2012, an average two-bedroom apartment rented for

\$1,071. On a same-sample basis², the average rent for a two-bedroom apartment increased by 3.8 per cent from October 2011 to October 2012. In last year's survey, the year-over-year per cent change in same-sample rents compared to 2010 was 0.9 per cent.

Survey Results

CMHC's October 2012 Rental Market Survey (RMS) of privately-owned rental structures in Greater Edmonton found a vacancy rate of 1.7 per cent within a total universe of 57,588 rental apartments.

This compares with a vacancy rate of 3.3 per cent within 57,941 apartment units in the October 2011 survey. The universe of purpose-built rental apartments decreased by 353 units between the two October surveys, representing a decline of 0.6 per cent.

Figure 2

Source: CMHC

¹ Based on privately-initiated rental apartment structures of three or more units.

² When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2011 and 2012 October Rental Market Surveys, we can get a better indication of actual rent increases paid by most tenants.

The change in the number of units in the universe was impacted by new unit completions and structures that were added or removed due to renovations, demolitions, fire damage, or condominium conversions. For example, there were 232 rental apartments permanently removed from the CMHC universe between October 2011 and 2012 due to condominium conversion. Other buildings removed from the survey were either vacant and for sale, demolished, boarded up, or converted to other uses. During the period October 2011 to September 2012, there were 1,029 rental units completed throughout the Edmonton CMA.

Figure 3

Source: CMHC

Table 1.1.1 shows vacancy rates by survey zone and unit type. In October 2012, three-bedroom suites reported the lowest vacancy rate at 1.1 per cent, followed by 1.4 per cent vacancy rate in both two-bedroom and bachelor units. One-bedroom units had the highest vacancy rate of two per cent. While three-bedroom units reported the lowest vacancy rate, they also experienced the strongest reduction in vacancy. From October 2011 to October 2012, three-bedroom vacancies declined by 2.3 percentage points.

The two areas with the lowest vacancy rates this fall were Leduc and West Jasper Place, at 0.4 per cent and 0.6 per cent, respectively. Other markets with relatively low vacancies included the University and Southwest, both at 0.7 per cent. The Castledowns and St. Albert zones were also showing a low vacancy rate of 0.9 per cent. The highest vacancy rate was found in Zone 14 at 4.4 per cent in October 2012. Stony Plain also

had a relatively high vacancy rate of four per cent. The largest reduction in vacancies occurred in Fort Saskatchewan, down 8.4 percentage points from October 2011 due to the commencement of a major refinery project in the vicinity.

A breakdown of apartment vacancy rates by rent range is provided in Table 1.4 and illustrated in Figure 3. Vacancies in October 2012 were highest for units renting between \$600 and \$749 per month at 3.3 per cent. Units renting for less than \$600 displayed vacancy rates of 2.3 per cent in October 2012 compared to 2.0 per cent a year prior. Units priced over \$1,200 per month reported a vacancy rate of 1.1 per cent this year compared to a rate of 2.2 per cent in 2011.

Comparing vacancy rates by size of structure, larger buildings generally had fewer vacancies than smaller structures. Structures with 100+ units reported an average vacancy

rate this fall of 0.7 per cent. This was the lowest vacancy rate compared to other structure sizes. Structures with three to five units had the highest vacancy rate of 4.1 per cent. Buildings with six-to-nineteen units displayed vacancy rates of 2.3 per cent in October 2012.

Availability Rates Trending Lower

The availability rate³ for apartments in Greater Edmonton decreased to 2.3 per cent in October 2012 from 4.3 per cent in October 2011. The availability rate was highest in Stony Plain at 4.7 per cent. The lowest availability rate, at one per cent, was located in the South West. All zones recorded a lower availability rate than the previous year. The largest reduction in availability rate was in Fort Saskatchewan and Strathcona County, declining 8.5 and 5.6 percentage points, respectively, from October 2011.

³ A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant. As the definition of availability includes vacancy, the availability rate will always be equal to or greater than the vacancy rate. The availability rate can provide some insight into rental market conditions as it reveals the intentions of landlords and tenants on a short-term basis.

Figure 4

Source: CMHC

Apartment Rents Increase

With vacancy rates declining across the Edmonton CMA, rent levels continued to move upward. The average monthly rent for all apartment units was \$965 in October 2012. On a same-sample basis, rents in existing units increased by 3.7 per cent between October 2011 and October 2012. This compares with one per cent increase for all units in the previous October survey.

A two-bedroom apartment rented for an average of \$1,071 in October 2012. Within units common to both surveys, two-bedroom rents increased by 3.8 per cent in the past year. In the previous survey, the change in two-bedroom rents was 0.9 per cent. The average one-bedroom apartment rent was \$882 in October 2012. On a same-sample basis, one-bedroom rents this year increased by 3.7 per cent compared with a 0.8 per cent rise in one-bedroom rents in existing units between October 2010 and October 2011.

Table 1.1.2 shows average apartment rents by bedroom type and survey zone. Similar to last year's survey, the district showing the highest overall average rent was Strathcona County at \$1,103 per month. The lowest rent levels in our survey were recorded in North Central and Hudson Bay Reserve, at \$819 and \$827, respectively.

Fewer Incentives Available

With vacancy rates moving lower across the Edmonton region, fewer landlords were offering incentives to lure new tenants and reduce turnovers. Typical incentives range from a month's free rent or two-year leases (with locked in rents) to extra appliances, free cable TV, parking or high-speed internet. The proportion of rental apartment structures offering incentives decreased from 10 per cent last October to 3.8 per cent this October. This represents the lowest level since October 2008, when slightly more than three per cent of structures surveyed offered incentives. With vacancies expected to remain on a downward trend in 2013, the proportion of landlords offering incentives will also decrease.

Row Vacancy Rates Decreased

CMHC's October 2012 survey of privately-owned rental townhouse structures in Greater Edmonton found a vacancy rate of 1.7 per cent

Figure 5

Source: CMHC

within a total universe of 7,922 rental row units. This compares with a vacancy rate of three per cent within 7,932 row units a year prior. The universe of purpose-built rental townhouses remained stable between the two October surveys.

At 5.6 per cent, the highest row vacancies across the Edmonton CMA were found in Zone 14.

Row vacancies in Jasper Place were also relatively high at 5.2 per cent. The availability rate within the Edmonton CMA's rental townhouse units decreased to 2.1 per cent in October 2012 compared to four per cent one year earlier.

Row Rents Increased

The average rent for all row units was \$1,167 per month in October 2012. The majority of townhouses in the region contain two-or-more bedrooms. Two-bedroom units rented for \$1,103 this year. Units with three-or-more bedrooms rented for \$1,210 this fall.

On a same-sample basis, townhouse rents rose year-over-year by 2.6 per cent. This compares to a 1.1 per cent gain in same-sample rents from October 2010 to October 2011. The highest townhouse rents, at \$1,302 per month, were found in West Jasper Place. The lowest row unit rents in October 2012 were found in Zone 14 at \$867 per month.

Rental Market Outlook

Apartment vacancy rates across the Edmonton CMA are expected to move up in 2013 as a result of

Figure 6

Source: CMHC

additional supply being added to the universe. Demand from migrants, however, will remain strong despite moderation from the 2012 level. Driven by positive economic growth and strong appetite for labour, migrants will continue to move to this area for jobs, contributing to demand for rental apartments.

On the supply side, expect additions to the universe via new construction. At the time of the October 2012 survey, there were 1,751 rental units under construction within the Edmonton CMA. Many of these have been started in the latter months of 2012, thus many of them will not reach completion and become available for rent until early 2014. Nonetheless, some rental apartments that were started in late 2011 and early 2012 will reach completion and become available for rent by October 2013, offering additional supply for renters.

With apartment vacancy rates remaining low, rents will continue to rise in 2013. As a result, apartment managers will also reduce the number of incentives for prospective tenants. A typical two-bedroom unit is expected to rent for close to \$1,105 by the fall of 2013.

Secondary Rental Market Survey

CMHC's Secondary Rental Market Survey⁴ collects information on rented condominium apartments, single-detached houses, double (semi-detached) houses, freehold row/town houses, duplex apartments, accessory apartments, and apartments which are part of a commercial or other type of structure containing one or two dwelling units

⁴ Readers are reminded to use caution when comparing data year-to-year in the Secondary Rental Market Survey since the type of dwellings surveyed and their characteristics can vary from one year to the next. Owners of these types of dwellings can, for example, shift them in and out of the rental market. Unlike structures in the RMS, which are purpose built for rental tenure, structures in the secondary rental market can be a rental structure one year and an owner-occupied structure the next.

Secondary Rental Market Survey: Condominium Apartments

CMHC's survey found a total condominium universe of 40,597 units this October compared with 41,183 units last fall. The number of condominium apartments identified as rental totalled 12,921 units, a 10 per cent increase from the 11,733 rental condominiums reported in October of last year. The proportion of condominium units identified as rental rather than owner-occupied increased to 32 per cent of the total condominium universe, compared to 28 per cent in 2011. The vacancy rate in rental condominium apartments across the Edmonton CMA was 2.5 per cent in October 2012 compared to a vacancy rate of 3.7 per cent in October 2011.

The average monthly rent for a typical two-bedroom condominium apartment unit in Edmonton in October 2012 was \$1,286 compared to \$1,164 in the October 2011 survey. The change in condominium rents can be attributed to increasing demand for rental condominiums as well as for the purpose-built rental stock. A comparison of monthly rents between rental condominiums and rental apartments in the October survey shows that, as was found in previous surveys, rents in condominium apartments are typically higher than in purpose-built rental units. In general, condominium units would be expected to rent for more than a similar sized rental unit because

Figure 7

Source: CMHC

new condominiums are designed and marketed as a premium product with additional features such as in-suite washer and dryers, walk-in closets and en-suite bathrooms, as well as underground parking.

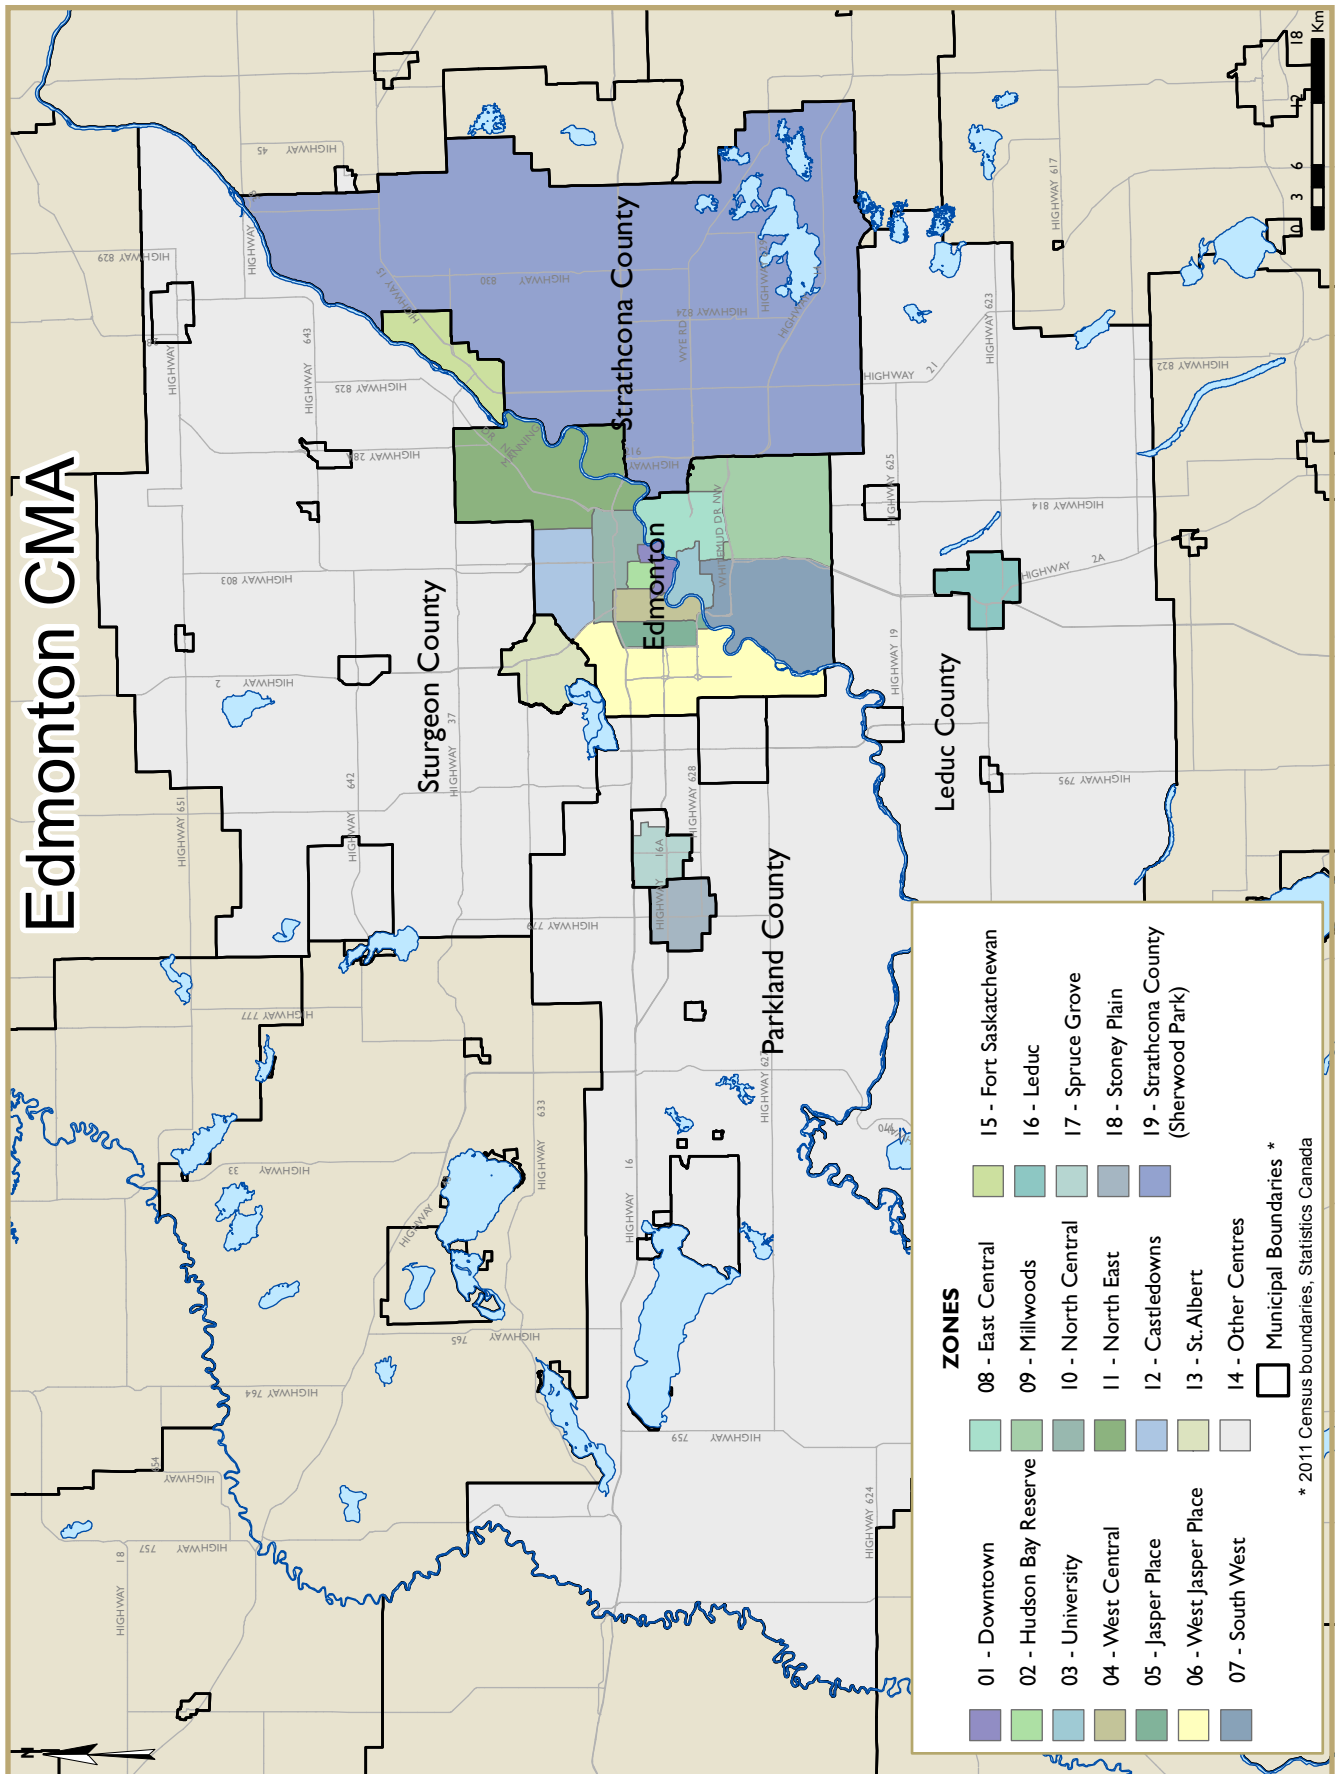

Secondary Rental Market Survey: Other Dwelling Types

The number of households renting in Edmonton's other secondary market in October 2012 was estimated at 48,873, compared to an estimated 47,756 in October 2011. The average rent in the other secondary market this year was \$1,193 compared to \$1,166 in October 2011.

The 2012 secondary survey of other dwelling types reported 17,268 households renting single-detached

units and paying an average rent of \$1,401 per month. This compares with an average single-detached rent of \$1,264 in October 2011. The October 2012 survey found 21,759 households renting either a semi-detached, row or duplex unit. These households paid an average rent of \$1,140. The 2012 survey reported an average rent for other unit types (primarily accessory suites) of \$972 per month.

Readers are reminded to use caution when comparing data year-to-year in the Secondary Rental Market Survey since the type of dwellings surveyed and their characteristics can vary from one year to the next. Owners of these types of dwellings can, for example, shift them in and out of the rental market. Unlike structures in the RMS, which are purpose-built for rental tenure, structures in the secondary rental market can be a rental structure one year and an owner-occupied structure the next.

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented is based on Statistics Canada's 2006 Census area definitions. October 2012 data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
