

RENTAL MARKET REPORT

Montréal CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2012

Highlights

- The vacancy rate in the Montréal CMA increased slightly from October 2011 to October 2012, rising from 2.5 per cent to 2.8 per cent.
- The highest vacancy rate was registered for bachelor units (4.4 per cent).
- The estimated increase in the average apartment rent was 0.8 per cent.

Vacancy rate increases slightly in the Montréal CMA

According to the results of the Rental Market Survey conducted by CMHC in October 2012, the rental housing vacancy rate in the Montréal census metropolitan area (CMA) rose slightly, reaching 2.8 per cent, compared to 2.5 per cent recorded in October 2011. While this small increase showed that the rental market had eased this fall, the proportion of unoccupied units has remained relatively stable since 2006. This stability reflected that demand and supply have evolved in such a way that the vacancy rate has stayed between 2.4 per cent and 2.9 per cent since 2006.

In 2012, demand for rental housing was limited by the continued strong movement to homeownership. The historically low mortgage rates have been favouring home buying, especially among young households aged from 25 to 34, who often turn to condominiums, which are a more affordable housing type. In fact, the large numbers of condominium starts recorded in the CMA in recent years have resulted in part from this homeownership trend. This year, many condominium projects were completed, such that some renters left their apartments for new properties.

The decrease in the demand for rental housing, attributable to the fact that many households have been moving to homeownership, has been limited by net migration, which will again be strong in the CMA in 2012. Net migration will be about

30,000 people for a fourth straight year, after having hovered at around 20,000 people annually from 2000 to 2008. The current high level has resulted from the increase in net international migration in Quebec over the past few years. In 2011, up to 50,000¹ immigrants settled in Quebec, and the majority (about 80 per cent) of them set up house in the Montréal area, largely on the Island. Most newcomers move into rental dwellings when they arrive in the country. They consequently make up a significant source of demand on the rental market in the CMA. Without immigration, the CMA would show a migration deficit. In fact, year after year, the Montréal area loses residents to other provinces across Canada and other regions of Quebec.

Rental housing demand from young people, on the other hand, has been

limited by the sluggish job market conditions for those aged from 15 to 24. This situation has probably prevented some young people from moving into their own rental dwellings or forced them to share units with roommates.

On the supply side, there have been fewer rental housing starts in the last few years than in the past. Foundations have been laid for some 1,500 rental dwellings (excluding seniors' units) annually since 2009. Many less new units have therefore been added to the rental housing stock in recent years, which, given the unchanged demand, has kept the vacancy rate stable.

In the end, the small rise in the vacancy rate resulted from a slightly lower demand and a relatively stable supply.

Figure 2

¹ Institut de la statistique du Québec, International and interprovincial migration by census metropolitan area, Quebec, 1996-2011.

Bachelor apartments post higher vacancy rate than larger units

According to the detailed survey results, bachelor units had a higher vacancy rate than larger apartments. For bachelor units, the vacancy rate was 4.4 per cent this year (versus 3.5 per cent in October 2011). The rates were up slightly for one-bedroom and two-bedroom apartments and remained stable for units with three or more bedrooms. In October 2012, 3.0 per cent of one-bedroom apartments were unoccupied, compared to 2.6 per cent of two-bedroom units and 2.1 per cent of units with three or more bedrooms, despite the movement to homeownership.

There were also vacancy rate differences depending on structure size. The vacancy rate for structures with 3 to 5 units (2.1 per cent) was lower than the rates for buildings with 20 or more units. In fact, the vacancy rates were 3.9 per cent for projects with 20 to 49 units and 3.0 per cent for those with 100 or more units. For this last category, the rate in fact rose from 2.3 per cent in the fall of last year to 3.0 per cent this past fall. Most of these larger structures are located downtown, and the increase their vacancy rate likely reflected the greater competition from the rental condominium segment.

Rents in 2012

In the Montréal CMA, the average apartment rent for all unit types combined² was close to the \$700 mark (at \$692). The highest average rents were registered in the

Downtown and Île-des-Sœurs zone³ (\$1,025) and the southern West Island zone (\$1,003). The rents are higher downtown because of the choice location of the units, near many services. The lowest average rents were also recorded on the Island, namely, in Villeray–Saint-Michel–Parc-Extension (\$579), Montréal-Nord (\$584) and Mercier (\$593). Saint-Jérôme was the only suburban sector to stand out in this regard (\$595).

The estimated change in the average apartment rent between October 2011 and October 2012 was 0.8 per cent. This estimate was made using a sample of structures common to both the 2011 and 2012 fall surveys. The small rise in the vacancy rate likely caused many landlords to limit their rent increases to ensure the stability of their clientele. An analysis by sector did not reveal any significant differences in the changes in rents among the different sectors.

Island of Montréal: immigration supporting demand

In October 2012, the vacancy rate on the Island of Montréal was 2.8 per cent and was up slightly over October 2011. Given that more than three-quarters of the rental apartments in the CMA are located on the Island of Montréal, the results for this sector are almost identical to those for the CMA.

If the vacancy rate on the Island rose slightly, it was partly due to the movement to homeownership that remained significant. On the other hand, demand for rental housing was supported by immigration. Among the 45,000 immigrants who arrived in the Montréal CMA in 2011, 38,000 settled on the Island⁴.

Figure 3

² Rents may or may not include utilities such as heating and electricity.

³ Baie-D'Urfé, Beaconsfield, Kirkland, Pointe-Claire, Senneville and Sainte-Anne-de-Bellevue.

⁴ Institut de la statistique du Québec, International and interprovincial migration by census metropolitan area and administrative regions, Quebec, 1996-2011.

Young people aged from 15 to 24 were also fuelling demand on the Island of Montréal rental market. While interregional net migration on the Island showed a deficit, the level was positive in the group aged from 15 to 24. A significant portion of these young people come to live on the Island to study. In 2011, net interregional migration on the Island in the 15 to 24 years' group was 2,650 people⁵.

The few rental housing units started on the Island in recent years, combined with the small decline in demand, contributed to the easing of the rental market in this sector of the CMA.

On the Island, the vacancy rates were generally lower in the more central market zones and higher on the eastern and western tips of the Island. While located slightly outside of the central districts, the Saint-Laurent zone still stood out, with one of the lowest vacancy rates in the CMA (1.5 per cent). The rental market in the Rosemont–La Petite-Patrie zone also posted a better performance (1.8 per cent) than most of the other zones in the CMA. As for the three West Island zones, their vacancy rates were among the highest. This was notably the case for the Dorval–Lachine–Saint-Pierre zone (3.9 per cent) and the zone comprising Dollard-des-Ormeaux, L'Île-Bizard, Pierrefonds and Roxboro (also 3.9 per cent).

Two zones had average rents above \$1,000 for two-bedroom apartments: Downtown (\$1,346) and the southern West Island zone (\$1,048). Montréal-Nord was the only zone where the average rent for two-bedroom apartments was still below \$600 (at \$587).

Laval: vacancy rate stable

The vacancy rate on the Laval rental market remained stable in October 2012, at 2.6 per cent. Among the different unit categories, the rates were 3.8 per cent for bachelor apartments and 4.3 per cent for one-bedroom units while, for two-bedroom apartments and those with three or more bedrooms, the rates stood at 2.1 per cent and 2.7 per cent, respectively.

Immigration has been a significant factor stimulating the Laval rental market. The number of immigrants arriving in the region has almost tripled over the last ten years, rising from 1,120 people in 2001 to 2,922 in 2011⁶.

The Laval rental market results varied from one zone to another. Three Laval zones had vacancy rates below 2 per cent, namely, Laval-Ouest–Fabreville–Sainte-Rose (1.0 per cent), Vimont–Auteuil (1.2 per cent) and Pont-Viau (1.7 per cent). Two zones stood out with rates above 3 per cent: Chomedey–Sainte-Dorothée (3.2 per cent) and Saint-François–Saint-Vincent–Duvernay (3.7 per cent).

The presence or absence of major transit routes does not seem to have had an impact on the rent differences among the various zones in Laval. Only the Chomedey–Sainte-Dorothée zone stood out, with a higher average rent (\$733 for two-bedroom apartments) than elsewhere in Laval. In the other zones, the rents hovered between \$635 in the Pont-Viau zone and \$680 in Vimont–Auteuil.

North Shore: vacancy rate unchanged at 2.2 per cent

On the North Shore, the vacancy rate also stayed at the same level as in October 2011 and was below the average for the CMA. The lower rents on the North Shore than in the other sectors of the CMA could explain the tighter market conditions there (vacancy rate of 2.2 per cent). The fact that the vacancy rate remained stable was due in part to the decline in rental housing starts over the last few years. The rental housing stock therefore showed weak growth. Like in the other large sectors of the CMA, the proportion of vacant units was above the 3-per-cent mark for bachelor apartments (3.4 per cent).

There were no significant vacancy rate or rent differences among the various zones on the North Shore. Only the most outlying zone (Saint-Jérôme) stood out, with a lower average rent than the other zones (\$609 for two-bedroom apartments).

South Shore: market slightly softer

On the South Shore, the vacancy rate reached 3.5 per cent and exceeded the average for the CMA. Market conditions were tighter in the eastern part of the South Shore. In fact, in the zone that includes Beloeil and Saint-Bruno, the vacancy rate was 1.1 per cent, and, in the zone comprising the municipalities of Carignan, Chambly and Mont-Saint-Hilaire, the rate stood at 1.4 per cent. In Longueuil, the proportion of unoccupied units was higher, reaching 4.4 per cent. This zone has the most rental housing units on the South Shore. The market was also softer in the zone that includes

⁵ Institut de la statistique du Québec, Migration balances of the administrative regions, all ages, Quebec and administrative regions, 2010-2011.

⁶ Institut de la statistique du Québec, International and interprovincial migration by administrative region, Quebec, 1996-2011.

Candiac, Châteauguay and Saint-Constant, which had a vacancy rate of 4.0 per cent.

On average, the rents recorded on the South Shore were higher than those noted on the North Shore and comparable to those observed in Laval. The average rent for two-bedroom apartments on the South Shore was \$688. Like in the Laval zones, the average rents observed in the South Shore zones were closer to those noted on the Island of Montréal than those registered in the North Shore zones. However, the rents were very similar from one zone to another within the South Shore.

Availability rate

At the time of the October survey, the availability rate was 3.4 per cent in the CMA⁷. The gap between the vacancy rate and the availability rate recorded in 2012 (0.6 of a percentage point), which was practically the same as in October 2011 (0.5 of a percentage point), is pointing to a small increase in the number of vacant units over the coming months.

Vacancy rate stable for rental condominiums

The rental condominium vacancy rate remained stable in October 2012, at 2.7 per cent. The number of rental condominiums posted a strong increase over the past year⁸. Despite the stability of the vacancy rate, demand for rental condominiums rose well as the supply of newly built condominiums for rent. The vacancy

rate for rental condominiums was practically identical to the rate for purpose-built rental apartments, despite the fact that the average rents for rental condominiums were well above the rents for purpose-built rental apartments. In many cases, the rental condominiums are situated in modern buildings, and they found takers even though their average rent, at \$997, was 45 per cent higher than the average for purpose-built rental apartments (\$692). In addition, in terms of vacancy rates, rental condominiums were performing as well as, or slightly better than, upscale purpose-built rental apartments, that is, those renting for \$900 or more (3.2 per cent).

The Downtown-Île-des-Sœurs zone had the highest share of rental condominiums. In fact, up to 22 per cent of the condominiums there were rentals, a proportion twice as high as the average for the CMA (11 per cent). Two other sectors also had significant shares of rental condominiums: Laval (11.6 per cent) and Vaudreuil-Soulanges (13.7 per cent). Large structures had the most rental condominiums. In fact, up to 15 per cent of the units were rentals in buildings with 100 or more units, and 13 per cent in those with 50 to 99 units.

The vacancy rates for rental condominiums were higher in certain suburban sectors than on the Island of Montréal. For example, the rates were 5.1 per cent on the North Shore and 4.6 per cent in Vaudreuil-Soulanges.

Forecasts for 2013

In 2013, the anticipated slight rise in mortgage rates will slow down the movement to homeownership. As well, the continued strong immigration will push up net migration to over 33,000 people. Rental housing starts will remain low, which will limit the growth in the rental housing stock. Consequently, demand will be higher and supply will rise only very slightly. The vacancy rate will therefore decrease to about 2.0 per cent. And, the average rent for two-bedroom apartments will reach \$740.

Across Quebec

Market conditions generally eased in Quebec's major urban centres, except in the Sherbrooke CMA, where the vacancy rate remained relatively stable. As a result, the vacancy rates in the Trois-Rivières and Sherbrooke CMAs, which reached 5.2 per cent and 5.0 per cent, respectively, were among the highest in the province. Conversely, the Québec and Saguenay CMAs posted the lowest proportions of vacant units, at 2.0 per cent in both cases, making them the tight markets. For all census agglomerations (CAs) with 50,000 to 99,999 inhabitants, the average vacancy rate attained 4.5 per cent. Overall, the softer conditions on the regional markets came with smaller increases in average rents. In fact, the estimated changes in the average rents between October 2011 and October 2012 ranged from 0.5 per cent in the Sherbrooke CMA to 1.9 per cent in the Québec CMA.

⁷ A unit is considered available if it is vacant or if the current tenant has given, or has received, notice to move, and a new tenant has not signed a lease. The availability rate is therefore always equal to or greater than the vacancy rate and gives an idea of the changes in the short-term supply.

⁸ This increase was attributable to the construction of many projects but also resulted from a more accurate identification of the universe.

Apartment Vacancy Rates (%) by Major Centres		
	Oct. 2011	Oct. 2012

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented is based on Statistics Canada's 2006 Census area definitions. October 2012 data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
