RENTAL MARKET REPORT
Québec CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2012

Highlights

- The vacancy rate reached 2.0 per cent in the Québec census metropolitan area (CMA) in October 2012, reflecting a slight easing of the market since the fall of 2011 (1.6 per cent).

- Rental market conditions actually eased only in the Sainte-Foy–Sillery–Cap-Rouge–Saint-Aug. zone, where the vacancy rate rose from 0.9 per cent in October 2011 to 2.0 per cent in the same month this year.

- The estimated increase in the average apartment rent from 2011 to 2012 was 1.9 per cent.

25 years of housing market intelligence you can count on

Vacancy rate rises slightly

The rental housing vacancy rate edged up to 2.0 per cent in October 2012, from 1.6 per cent at the same time last year. This small increase in the vacancy rate reflected a relatively stable demand combined with a slightly higher supply.

Despite its relative stability, demand for rental housing remained steady thanks to strong migration. In fact, net migration in the CMA stood at 4,650 people in 2011 and will likely reach the same level this year. This high level is attributable to immigration and the arrival of people from other regions across Quebec. In all, the Québec CMA gained some 2,600 individuals from foreign countries in 2011, for an increase of nearly 60 per cent over 2007. People who arrive from abroad usually opt for rental dwellings when they settle in their host city. Net migration with other regions of Quebec, for its part, reached just over 2,100 people in 2011. Most of the individuals coming from other regions around the province are young people aged from 15 to 29[1], and they are most often renters.

As well, employment among young people aged from 15 to 24 has been on the rise this year, accounting for the steady rental housing demand. Still, total job creation has not been as strong this year, which has limited rental housing demand overall. In addition, the general movement of renter households to homeownership has continued this year, thanks to the still favourable economic environment in the CMA and the low mortgage rates. On the whole, demand for rental housing has stayed significant but has not changed significantly from 2011.

After having increased in the two previous years, rental housing starts decreased in 2011, which caused the rental housing stock to grow only slightly this year.

In the end, demand was rather stable and the increase in supply was limited, which worked in favour of a rise in the vacancy rate this year.

The rental market was still less tight than it was in previous years (the vacancy rate was 0.6 per cent in 2009). In fact, a very small share of vacant units were available over the past decade. During the period from 2000 to 2011, the vacancy rate was below the 2-per-cent mark, even hitting a low of 0.3 per cent in 2002. With rental housing starts rising in 2009 and 2010, the market has since eased somewhat.

Vacancy rate increases for bachelor apartments

The proportion of unoccupied bachelor units in the Québec CMA doubled compared to October 2011, reaching 2.6 per cent this past October. The vacancy rates for apartments of this type stood at 3.0 per cent in both the Basse-Ville–Vanier and Haute-Ville zones.

For the other unit types, the vacancy rates did not change significantly, as they reached 1.9 per cent for one-bedroom apartments, 1.8 per cent for two-bedroom apartments and 2.3 per cent for units with three or more bedrooms.

Market softer for larger structures

A detailed analysis of the survey results revealed an increase in the vacancy rate for structures with 100 or more units. For these buildings, the rate reached 4.0 per cent in October 2012 (up from 2.2 per cent in October 2011), which was well above the rates recorded for smaller structures. The higher-than-average rents charged in larger buildings very probably accounted for this result. In fact, the average rent for two-bedroom apartments in these structures reached $1,082, compared to $741 on average in the CMA. The vacancy rate for apartments renting for $1,000 or more was about twice as high as the average for the overall CMA. In this rent range, 4.0 per cent of the units were vacant, compared to about 2.0 per cent in all the other rent ranges. The rental condominium market was likely also providing competition for purpose-built rental apartments in large structures, and the movement to homeownership was no doubt responsible for the increase in the vacancy rate observed for these structures over the past year. For the other building types, the rates stood between 1.3 per cent, for structures with 3 to 5 units, and 2.1 per cent, for those with 20 to 49 units.

Conditions ease in single zone

Most of the different market zones in the CMA remained stable. Only the Sainte-Foy–Sillery–Cap-Rouge–Saint-Aug. zone saw its rental market ease. The vacancy rate in this zone increased from 0.9 per cent in October 2011 to 2.0 per cent in October of this year. The many rental

---

[1] Institut de la statistique du Québec, Migration balances of the administrative regions, all ages, Quebec and administrative regions, 2010-2011

and condominium housing units started in this zone in recent years have led to this easing.

Vacancy rates below the 2-per-cent market were recorded in four zones of the CMA. Two of them are located in the northern suburbs, namely, the Val-Bélair–Saint-Émile–Loretteville zone (1.2 per cent) and the Charlesbourg–Stoneham zone (1.4 per cent). A rate below 2 per cent was also noted in the southern suburbs, that is, in the Charny–Saint-Romuald zone (1.7 per cent). And, in the central zone of Les Rivières–L'Ancienne-Lorette, the rate was 1.8 per cent. The tighter market conditions in these zones than in the overall CMA were attributable to the fact that they have smaller proportions of bachelor units.

Estimated change in average rents[2]

The average rent for two-bedroom apartments rose by 2.3 per cent between the October 2011 and October 2012 surveys. The estimated change in rents was smaller this year than last year (3.0 per cent). All market zones registered increases similar to the average for the CMA. The changes in rents were also similar for the different apartment types.

Three market zones stood out with higher average rents than the average for the CMA ($741): the Haute-Ville zone, where the average rent for two-bedroom apartments was $912, as well as Sainte-Foy–Sillery–Cap-Rouge–Saint-Aug. ($846) and Les Rivières–L'Ancienne-Lorette ($808). The central zones generally have higher rents, except for the Basse-
Ville, where the housing stock is older and typically of lower quality than, for example, in the Haute-Ville.

---

[2] It should be noted that CMHC uses a measure that estimates the change in rents charged in existing structures. This measure therefore excludes the impact of new structures and conversions added to the universe between surveys. The estimated percentage change in the average rent is a measure of the market movement and is based on those structures that were common to the survey sample for both years.

Rental market to ease in 2013

In 2013, rental housing demand will remain significant in the CMA. The Québec area will welcome just as many newcomers, most of whom will opt for rental dwellings.

The job market will stay active; however, employment growth will be less strong than in recent years, which will dampen demand. In addition, the movement to homeownership will continue. In the end, the economic and demographic environment will remain stable, which will moderate demand for rental housing compared to the last few years.
On the supply side, rental housing construction will grow this year. As a result, with the arrival of an appreciable number of new rental dwellings, conditions should ease more markedly and the proportion of vacant units should reach 2.5 per cent. The average rent for two-bedroom apartments should reach $740.

Rental condominium market

On the secondary rental market, the vacancy rate for rental condominiums remained stable this year, having reached 2.2 per cent in October 2012. Market conditions were therefore about the same for rental condominiums as for purpose-built rental apartments, despite the fact that the average rent for condominiums was considerably higher than the average for purpose-built apartments. In fact, condominiums rented for 30 per cent more, on average, than purpose-built rental units. However,
Figure 4

Conditions Less Tight for Units with Higher Rents

Vacancy Rates (%)

Rent range	Rate
$400 to $549	1.6
$550 to $699	1.8
$700 to $849	2.0

Charlesbourg	$696
Val-Bélair	$696
Les Rivières	$772
Sainte-Foy	$827
Haute-Ville	$934

Source: CMHC

condominiums are usually situated in more modern buildings, where more services are offered to tenants. A review of the different sectors of

the CMA revealed that the vacancy rate was slightly lower in the North Centre (1.9 per cent) than in the Northern Suburbs (3.0 per cent)

or on the South Shore (2.9 per cent). It should be noted that most of the rental condominiums in the metropolitan area are located in the North Centre sector.

According to our survey, 9 per cent of the just over 25,000 condominiums in the Québec CMA were rental units. The proportions were 10 per cent in the North Centre sector and slightly lower in the Northern Suburbs (7.3 per cent) and on the South Shore (8.1 per cent). In buildings with 100 or more units, up to 11 per cent of the condominiums were rentals.

Across Quebec

Market conditions generally eased in Quebec's major urban centres, except in the Sherbrooke CMA, where the vacancy rate remained relatively stable. As a result, the vacancy rates in the Trois-Rivières and Sherbrooke CMAs, which reached 5.2 per cent and 5.0 per cent, respectively, were among the highest in the province. Conversely, the Québec and Saguenay CMAs posted the lowest proportions of vacant units, at 2.0 per cent in both cases, making them the tight markets. For all census agglomerations (CAs) with 50,000 to 99,999 inhabitants, the average vacancy rate attained 4.5 per cent. Overall, the softer conditions on the regional markets came with smaller increases in average rents. In fact, the estimated changes in the average rents between October 2011 and October 2012 ranged from 0.5 per cent in the Sherbrooke CMA to 1.9 per cent in the Québec CMA.

[1]The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:
a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)
** Data suppressed to protect confidentiality or data not statistically reliable.
++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: $500 in the previous year vs. $550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.
The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market** (SRMS) in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

• Rented single-detached houses.
• Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
• Rented freehold row/town homes.
• Rented duplex apartments (i.e.. one-above-other).
• Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
• Rented condominiums (can be any dwelling type but are primarily apartments).
• One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

• A Household Rent Survey of all households to collect information about rents.
• A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
• A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented is based on Statistics Canada's 2006 Census area definitions. October 2012 data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
