

RENTAL MARKET REPORT

Victoria CMA

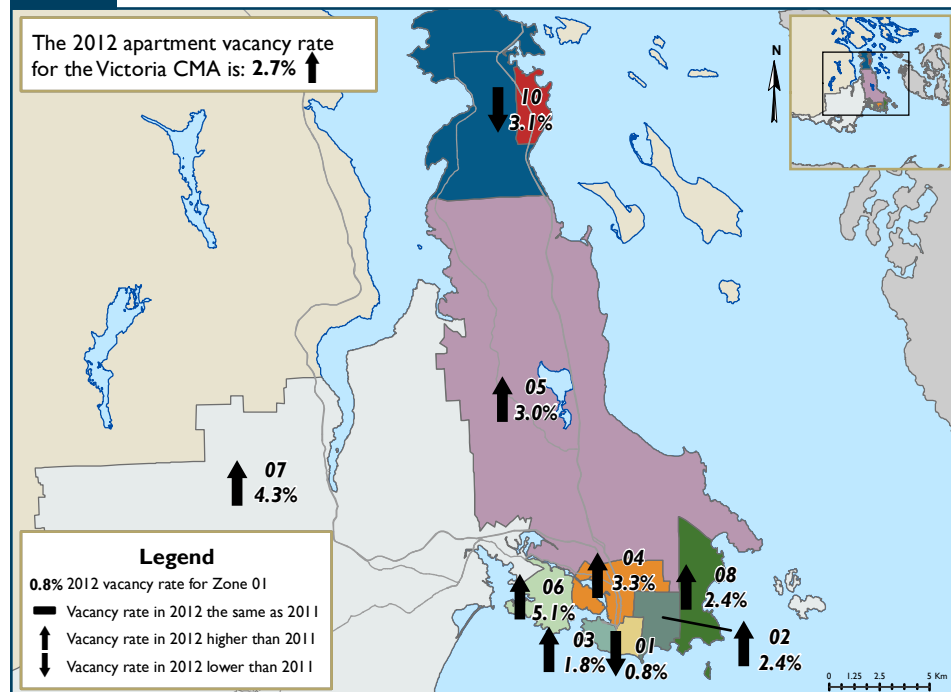

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2012

Victoria Highlights

- The Victoria CMA apartment vacancy rate increased to 2.7 per cent in October 2012, from 2.1 per cent in October 2011.¹
- The average same sample two-bedroom rent increased 0.9 per cent in October 2012, relative to October 2011.²
- In 2013, increasing net migration will support rental housing demand and push the vacancy rate down next year.

Figure 1

¹ Due to seasonal factors, the results of the October 2012 Rental Market Survey are not directly comparable with the results from the April 2012 Rental Market Survey.

² The change in same sample apartment rents measures the change in rent for rental units common to both the October 2012 and October 2011 surveys.

More Choice for Renters

Vacancy rates for both apartments and town homes moved up in the Victoria CMA over the past year providing more choice for renters. The average apartment vacancy rate increased to 2.7 per cent in 2012 from 2.1 per cent in 2011 (Figure 2) following the provincial trend.³

Several factors on both the demand and supply sides contributed to the increase in the rental vacancy rate, including recent lower levels of migration, the movement from rental to homeownership and moderate employment gains for younger workers who tend to be renters. New purpose-built rental supply, recently renovated units added back into the rental pool, combined with competition from investor-owned rentals and secondary rental accommodation also contributed to rising apartment vacancy rates in 2012.

Following several years of growth, migration from other provinces to British Columbia in the first half of 2012 was lower than it was a year earlier, a trend that likely affected Victoria's rental market. Migration supports rental housing demand because many people new to an area tend to rent before moving to homeownership.

Higher levels of employment and low mortgage rates continued to attract renters to homeownership. A significant increase in full-time employment for the 25-44 age group was recorded in October 2012 compared to a year ago. This factor, combined with low mortgage rates, might have encouraged renters in this

age range to leave the rental market for homeownership.

Rental demand from younger people was relatively subdued because of less favourable job market conditions. The employment level in the 15-24 age group has declined consistently since 2008. Younger household groups have a higher tendency to rent. Statistics

Canada reported that the provincial unemployment rate for the labour force 15 to 24 years of age remained high at 13.0 per cent in October 2012 compared to 12.6 per cent in October 2011. With fewer jobs many younger adults remained or returned home to live with their parents or moved in with friends to reduce their expenditures. This trend can

Figure 2

Figure 3

³ These vacancy rates reflect all private purpose-built rental apartments (bachelor, one-bedroom, two-bedroom, and three-bedroom or larger).

shifts rental demand away from the purpose-built rental housing captured by the CMHC survey.

In addition, an increasing supply of newly built rental units contributed to higher vacancy rates. Rental housing completions reached 234 units in 2011 and will surpass this level in 2012 (Figure 3). Still, it should be taken into consideration that this easing of the market was rather limited, since, for the overall CMA, the total number of purpose-built rental units increased by only one per cent from 23,987 units in 2011 to 24,214 in 2012.

The movement in the apartment vacancy rate differed across bedroom types. While vacancy rates decreased for bachelor units in the CMA, the proportion of unoccupied units increased for the other unit types. One-, two- and three-bedroom or larger apartments all recorded higher vacancy rates in October 2012 compared to a year ago.

Vacancy rates also varied across the Victoria CMA. Vacancy rates were generally lower in and near the city core, where homeownership costs are higher and where employment and educational opportunities are concentrated, attracting renters to these areas. The West Shore communities experienced the most significant increase in average vacancy rates. Much of the new housing stock in this region includes secondary suites, contributing to competition with purpose-built rentals. The City of Esquimalt recorded the CMA's highest average vacancy rates, with an average apartment vacancy rate of 5.1 per cent. Conversely, apartment rental demand in the Cook Street area increased, as vacancy rates declined to 0.8 per cent this year from 1.9 per cent last October.

Figure 4

Average Rent Growth Slows

Moderating demand for rental housing and increased competition from the secondary rental market kept the pace of average rent increase below the rate of inflation. Fixed sample two-bedroom apartment rents in Victoria grew by 0.9 per cent in October 2012 compared to October 2011, below the British Columbia fixed sample rent increase of 1.9 per cent.

A substantial range exists between the rents observed across Victoria CMA municipalities. For an average one-bedroom apartment, James Bay recorded the highest average monthly rent, while the lowest rent was found in Esquimalt (Figure 4). When compared to the provincial average, two-bedroom rents are at a similar level, while average one-bedroom rents are nine per cent lower in Victoria compared to the British Columbia average.

Condominiums Supplement the Rental Stock

The rise in magnitude of the condominium apartment rental sector is evident in Victoria's housing market, as this segment is in close competition with both the purpose-built rental market and the homeownership market. There has been very little new purpose-built rental construction in recent years because high land prices and stable rents have made it difficult to build rental projects profitably. Instead, developers have opted for condominiums projects, which indirectly add to the stock of rental housing by individual investor-owners. CMHC estimates that 20.7 per cent of all Victoria CMA apartment condominiums are currently part of the region's rental supply (Figure 5). Many of these units are located in newer buildings and offer relatively more in terms of amenities (e.g. in-suite washer/dryer, dishwasher, fitness facility).

The premium for a rental condominium unit versus a purpose-built unit associated with a two-bedroom unit in the City of Victoria was 36 per cent compared to 22 per cent in the remainder of the Victoria CMA. According to the CMHC rental market survey, about half of the total supply of rental accommodation comes from the secondary rental market⁴.

Rental Demand to Increase in 2013

As the local economy and labour market enter a period of recovery in 2013, CMHC projects that vacancy rates will decrease slightly across the Capital region. Net migration is expected to increase to the Victoria CMA and the addition of

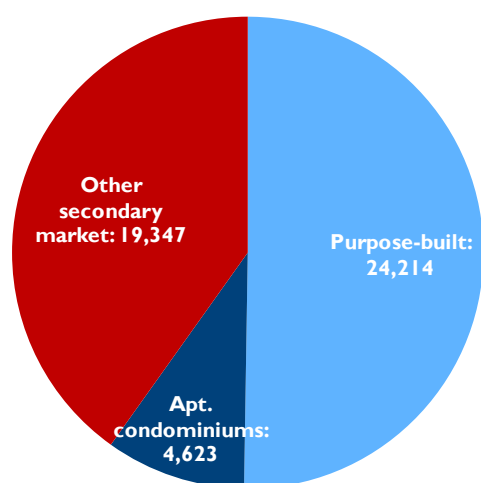

new jobs will stimulate the demand for rental accommodation in the region. In addition, a moderate level of completions since 2010 will reduce the number of additional condominium units competing with purpose-built rental homes. While rental demand will increase as economic conditions improve, it will be tempered by a move towards homeownership. With mortgage rates remaining low in 2013 and home prices forecast to remain stable, a portion of current renters will likely take advantage of low monthly mortgage payments and make the move to homeownership. As a result of all of these factors combined, renters can expect vacancy rates to edge down, and same sample rents to rise in line with the general rate of inflation.

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented is based on Statistics Canada's 2006 Census area definitions. October 2012 data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
