

# RENTAL MARKET REPORT

## Winnipeg CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2012

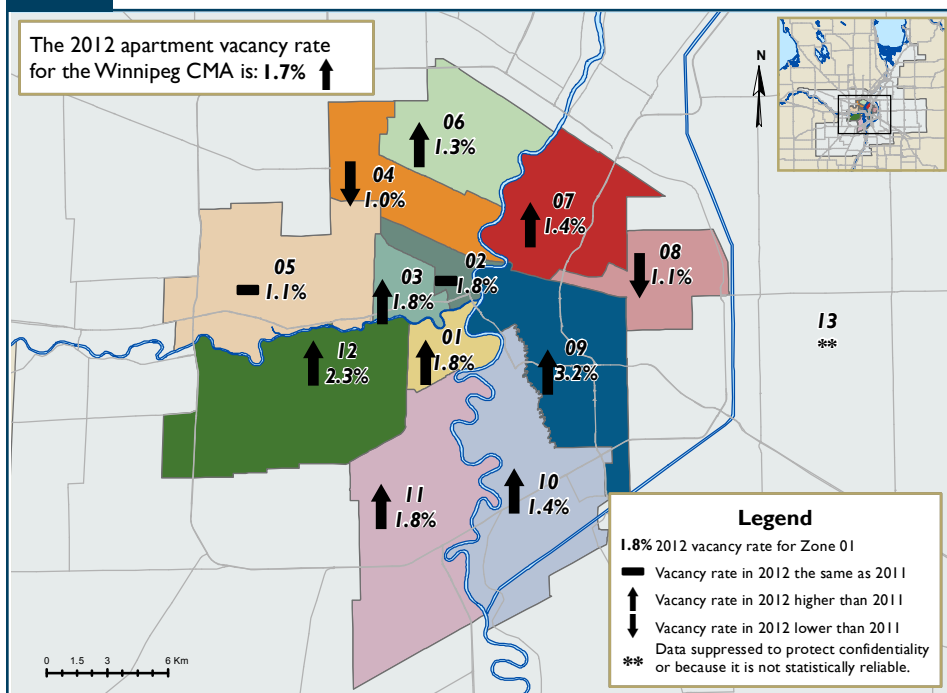

### Highlights

- The vacancy rate for private apartments in the Winnipeg Census Metropolitan Area (CMA) increased from 1.1 per cent in October 2011 to 1.7 per cent in October 2012.
- Average monthly rent for two-bedroom apartment units in the Winnipeg CMA was \$911 in October 2012.
- In rental structures common to both the 2011 and 2012 surveys, the year-over-year change in the average rent for a two-bedroom apartment this October was 3.6 per cent.

## Winnipeg Rental Market Report

### Winnipeg Vacancy Rate Increased in 2012

According to CMHC's October 2012 Rental Market Survey (RMS), the Winnipeg CMA recorded an apartment vacancy rate<sup>1</sup> of 1.7 per cent in October, up more than half a percentage point from 1.1 per cent recorded in October of 2011. This represents the second year in row the vacancy rate has increased. Despite this rise, Winnipeg still retains one of the lowest vacancy rates among all CMAs in Canada and well below the national average vacancy rate of 2.6 per cent. This represented the 12th year in a row that the vacancy rate in

the Winnipeg CMA remained below 2.0 per cent.

Contributing to the increase in vacancy rate was a small expansion of the supply of private rental apartment units. After declining in seven of the last 12 years, there was a net increase of 250 units in the rental market universe in the October 2012 survey. In a universe of 52,569 units, this represented an increase of 0.5 per cent. While units continue to be permanently lost to conversion to condominium and demolition, the level of new construction over the last two years has been relatively strong and was able to offset these losses for 2012. However, the impact of a small increase in the universe on the overall vacancy rate was limited.

Figure 2

Source: CMHC Rental Market Survey

<sup>1</sup> Based on privately-initiated rental apartment structures of three or more units.

Adding to the higher vacancies, existing renters continued to make the move to homeownership due to favourable conditions. Winnipeg saw employment growth in excess of two per cent in the first 10 months of 2012 with gains in both full and part-time positions. Employment growth was strongest among those aged 15 to 24, and was positive for those aged 25 to 44, age categories that include many first-time buyers. These factors, in combination with continued historically low mortgage rates, have encouraged home buying among renters.

Another factor influencing this year's survey results was a decline in net-migration to Manitoba, which was down eight per cent year-over-year in the first half of 2012, reaching 4,805 persons. Contributing to the decline over this period was a decrease in net international migration and an increase in interprovincial outflows. As Winnipeg represents the majority of the province's population, it also experienced a decline in overall net-migration. This would have resulted in fewer potential renters entering the market since the October 2011 survey as well as more renters vacating units as they left for other provinces.

### Apartment Vacancy Rate Moves Up in Newer Units

Reviewing the vacancy rate by the age of rental structure (Table 1.2.1), newer structures built after 1990 had the highest vacancy rate at 5.3 per cent, more than double the 2.4 per cent vacancy rate posted in October 2011. This was likely the result of the addition of a number of newly completed units still in the process of being absorbed during the time of the October 2012 survey. The vacancy rate was also higher in

Figure 3

Source: CMHC Rental Market Survey

older structures built prior to 1940, increasing almost a full percentage point over the previous year to 2.6 per cent. Higher vacancy rates were also found in units renting for more than \$1,095 per month, where the vacancy rate rose to 4.5 per cent in October 2012 from 2.6 per cent one year earlier. The lowest vacancy rate of 0.9 per cent was for units renting between \$600 and \$699 per month. This was also the only rent range to register a decline in vacancy, down from 1.1 per cent one year earlier.

Winnipeg's October 2012 vacancy rate was highest in two-bedroom suites at 2.0 per cent, followed by bachelor suites at 1.7 per cent and one-bedroom units at 1.4 per cent. The vacancy rate for units with three or more bedrooms was the lowest and remained at 1.1 per cent in October 2012.

The increase in rental apartment vacancies was most pronounced in the suburban zones of Winnipeg where in total the vacancy rate increased from 0.9 per cent in October 2011 to 1.6 per cent in this most recent survey.

With the exception of Transcona, all of Winnipeg's eight suburban zones saw vacancy rates remain virtually unchanged or increase from the prior year. Vacancy rate in Transcona declined from 2.6 per cent in October 2011 to 1.1 per cent in October 2012. The Transcona zone has the smallest universe within City limits, thus changes of only a few units can create large changes to the vacancy rate.

The greatest increase in vacancy rate among the suburban zones was in Assiniboine Park where the rate increased from 0.5 per cent in October 2011 to 2.3 per cent this October. Much of this can be attributed to the addition of 139 new units to the area over this period, which represents an increase of almost 10 per cent to its overall universe. The St. Boniface zone had the highest vacancy rate at 3.2 per cent, an increase of 1.4 percentage points over the previous year.

Among core area zones, Fort Rouge recorded the greatest increase in the vacancy rate, rising to 1.8 per cent in October 2012 from 0.9 per cent in

Figure 4

Source: CMHC

October 2011. Fort Rouge also saw its rental market universe decline by 209 units or three per cent over the same period. Lord Selkirk recorded the greatest decline in vacancy rate, falling a full percentage point to 1.0 per cent from October 2011 to October 2012. In general, vacancy rates in the suburban zones were at 1.6 per cent compared to the core area at 1.7 per cent.

The vacancy rate in units that do not fall under Manitoba's rent increase guidelines, namely those renting for more than \$1,130 per month rate was 5.3 per cent, which was significantly higher than the rate of 1.4 per cent for units renting below this threshold. Units constructed and added to the universe after 2001 are also exempt from the guideline, within these units, the vacancy rate was 5.2 per cent compared to 2.5 per cent one year earlier.

### Availability Rate also moves up

In October 2012, the availability rate<sup>2</sup> in Winnipeg's apartment universe increased to 2.5 per cent from 1.6 per cent a year earlier. The availability rate moved up across all bedroom types with the largest increase occurring in two-bedroom units. The availability rate in the two-bedroom category increased from 2.0 per cent in October 2011 to 3.2 per cent in October 2012.

### Rental Universe Increased in 2012

For only the third time in the last 20 years, the Winnipeg CMA rental market universe posted a net increase. Additions to the row and apartment universe between the October 2011 survey and the October 2012 survey totalled 1,406 units. Of these, 650

were from new construction and 756 units were returned to the universe after having undergone renovations. The temporary removal of units from the universe while under renovation during the 2012 October survey resulted in a decrease of 697 units. Permanent losses from the universe resulted from 323 units removed due to condominium conversion and a further 70 units were lost due to demolition.

### Apartment Rents Continue to Rise Steadily

The average two-bedroom apartment rent in the Winnipeg CMA was \$911 in October 2012. Across the city, average two-bedroom monthly rents ranged from a low of \$638 in Lord Selkirk, to a high of \$993 in Assiniboine Park. The Assiniboine Park zone also saw the greatest increase in two-bedroom rent, rising \$114 from the average calculated in October 2011.

The same-sample<sup>3</sup> average rent in existing units rose by 3.8 per cent between October 2011 and October 2012. This was lower in magnitude than the 4.6 per cent increase in same-sample rent posted one year earlier, due largely to the increase in vacancy. This year's gain surpassed the mandated maximum increase of one per cent in 2012. Several exemptions exist within provincial rent control regulations that would result in same-sample rents increasing at a stronger pace than the guideline amount. Buildings renovated under a rehabilitation scheme may qualify for an exemption from the rent

<sup>2</sup> A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant. As the definition of availability includes vacancy, the availability rate will always be equal to or greater than the vacancy rate. The availability rate can provide some insight into rental market conditions as it reveals the intentions of landlords and tenants on a short-term basis.

<sup>3</sup> When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2011 and 2012 October Rental Market Surveys, we can get a better indication of actual rent increases paid by most tenants.

Figure 5

Source: CMHC

increase guideline for a maximum of five years, allowing for the recovery of renovation costs to be phased in over a period of time.

Between 2007 and 2011, applications to the Residential Tenancies Branch for exemption under a renovation scheme represented more than 7,000 units<sup>4</sup>, or approximately 14 per cent of the total universe. New rental construction has also been exempt from the rent control guidelines since 2002 and since this time, 3,722 units have been completed and added to the universe. As a result, the share of units exempted from rent controls has increased in the overall rental universe. In addition, landlords facing rising maintenance and energy costs may also apply for permission to increase rents above the guideline. Under these criteria, the Residential Tenancies Branch

received 327 applications in 2011 for above guideline increases in rent representing more than 30 per cent of all rental units.

### Vacancy Rate Rises for Row Rentals

In concert with the increase in vacancy in the apartment market, the vacancy rate in Winnipeg's private row structures increased to 1.1 per cent in October 2012 from 0.5 per cent in October 2011. At 1,211 units, the universe of private row rental suites increased by 63 units from the previous year. Average rents for all types of row units were \$1,009 per month in October 2012. The presence of new units renting at higher rents contributed to this increase.

## Secondary Rental Market Survey

CMHC collects information on apartment condominiums offered for rent, as well as the following types of units: rented single-detached houses, rented double (semi-detached) houses, rented freehold row/town houses, rented duplex apartments, rented accessory apartments, and rented apartments which are part of a commercial or other type of structure containing one or two dwelling units<sup>5</sup>.

## Secondary Rental Market Survey: Condominium Apartments

### Vacancy Rate Moves Lower in Rental Condominium Apartments

CMHC's survey found the vacancy rate in rental condominium apartments across the Winnipeg CMA was 1.3 per cent this past October, compared to 1.8 per cent in October 2011. The survey also found that the number of condominium apartments identified as investor-owned and rented rather than owner-occupied totalled 2,011 suites, an increase of 183 units over the previous year. Of a total condominium universe of 13,863 units, this represents 14.5 per cent of the total condominium universe, up from 13.8 per cent in October 2011.

<sup>4</sup> Province of Manitoba, Residential Tenancies Branch Annual Reports 2007-2011.

<sup>5</sup> Readers are reminded to use caution when comparing data year-to-year in the Secondary Rental Market Survey since the type of dwellings surveyed and their characteristics can vary from one year to the next. Owners of these types of dwellings can, for example, shift them in and out of the rental market. Unlike structures in the RMS, which are purpose built for rental tenure, structures in the secondary rental market can be a rental structure one year and an owner-occupied structure the next.

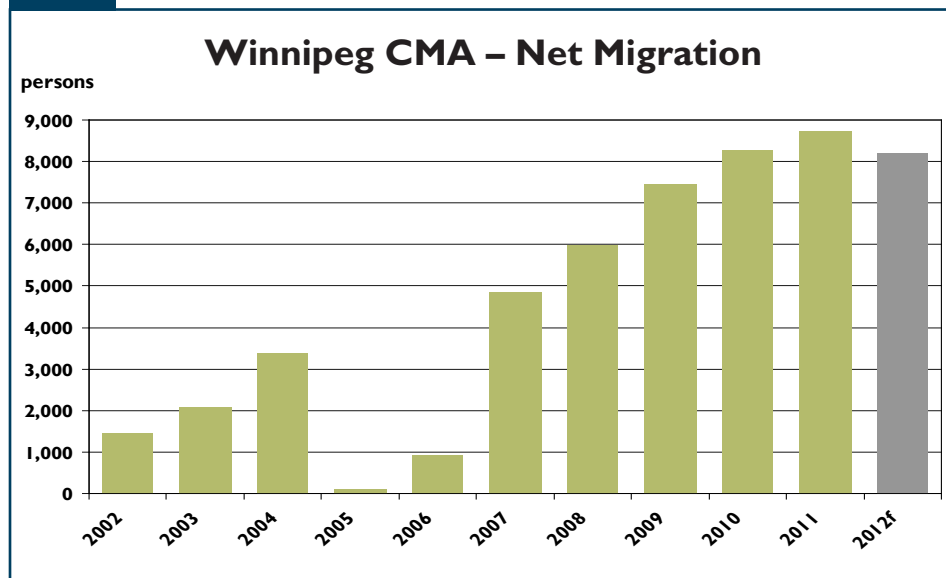

The average rent for a typical two-bedroom condominium apartment unit was \$1,160 per month in October 2012, \$249 more than the average for a two-bedroom unit in the purpose-built rental market. Rental rates in condominium apartments are typically higher compared to those in the purpose-built market as the buildings are generally newer or renovated and may have more features such as higher grade finishes and underground parking

## Secondary Rental Market Survey: Other Dwelling Types

The number of households renting in Winnipeg's other secondary market this October was estimated at 22,159, down from 24,234 in the October 2011 survey. Table 5.2 provides details on households renting secondary units by dwelling type. In 2012, there were 8,562 households renting single-detached units, down from 9,480 one year earlier. There were also fewer households renting semi-detached, row or duplex units at 8,725, down from 9,298 in October 2011. The remaining households were renting accessory suites.

Average rents by dwelling type in the secondary market are provided in Table 5.1. For all dwelling types, the average rent this October was \$835 compared to \$815 in last year's survey. A single-detached house rented for an average of \$924 while for semi-detached, row, and duplex units, the average rent was \$799.

## Rental Market Outlook

### Vacancy Rate to Rise Modestly in 2013

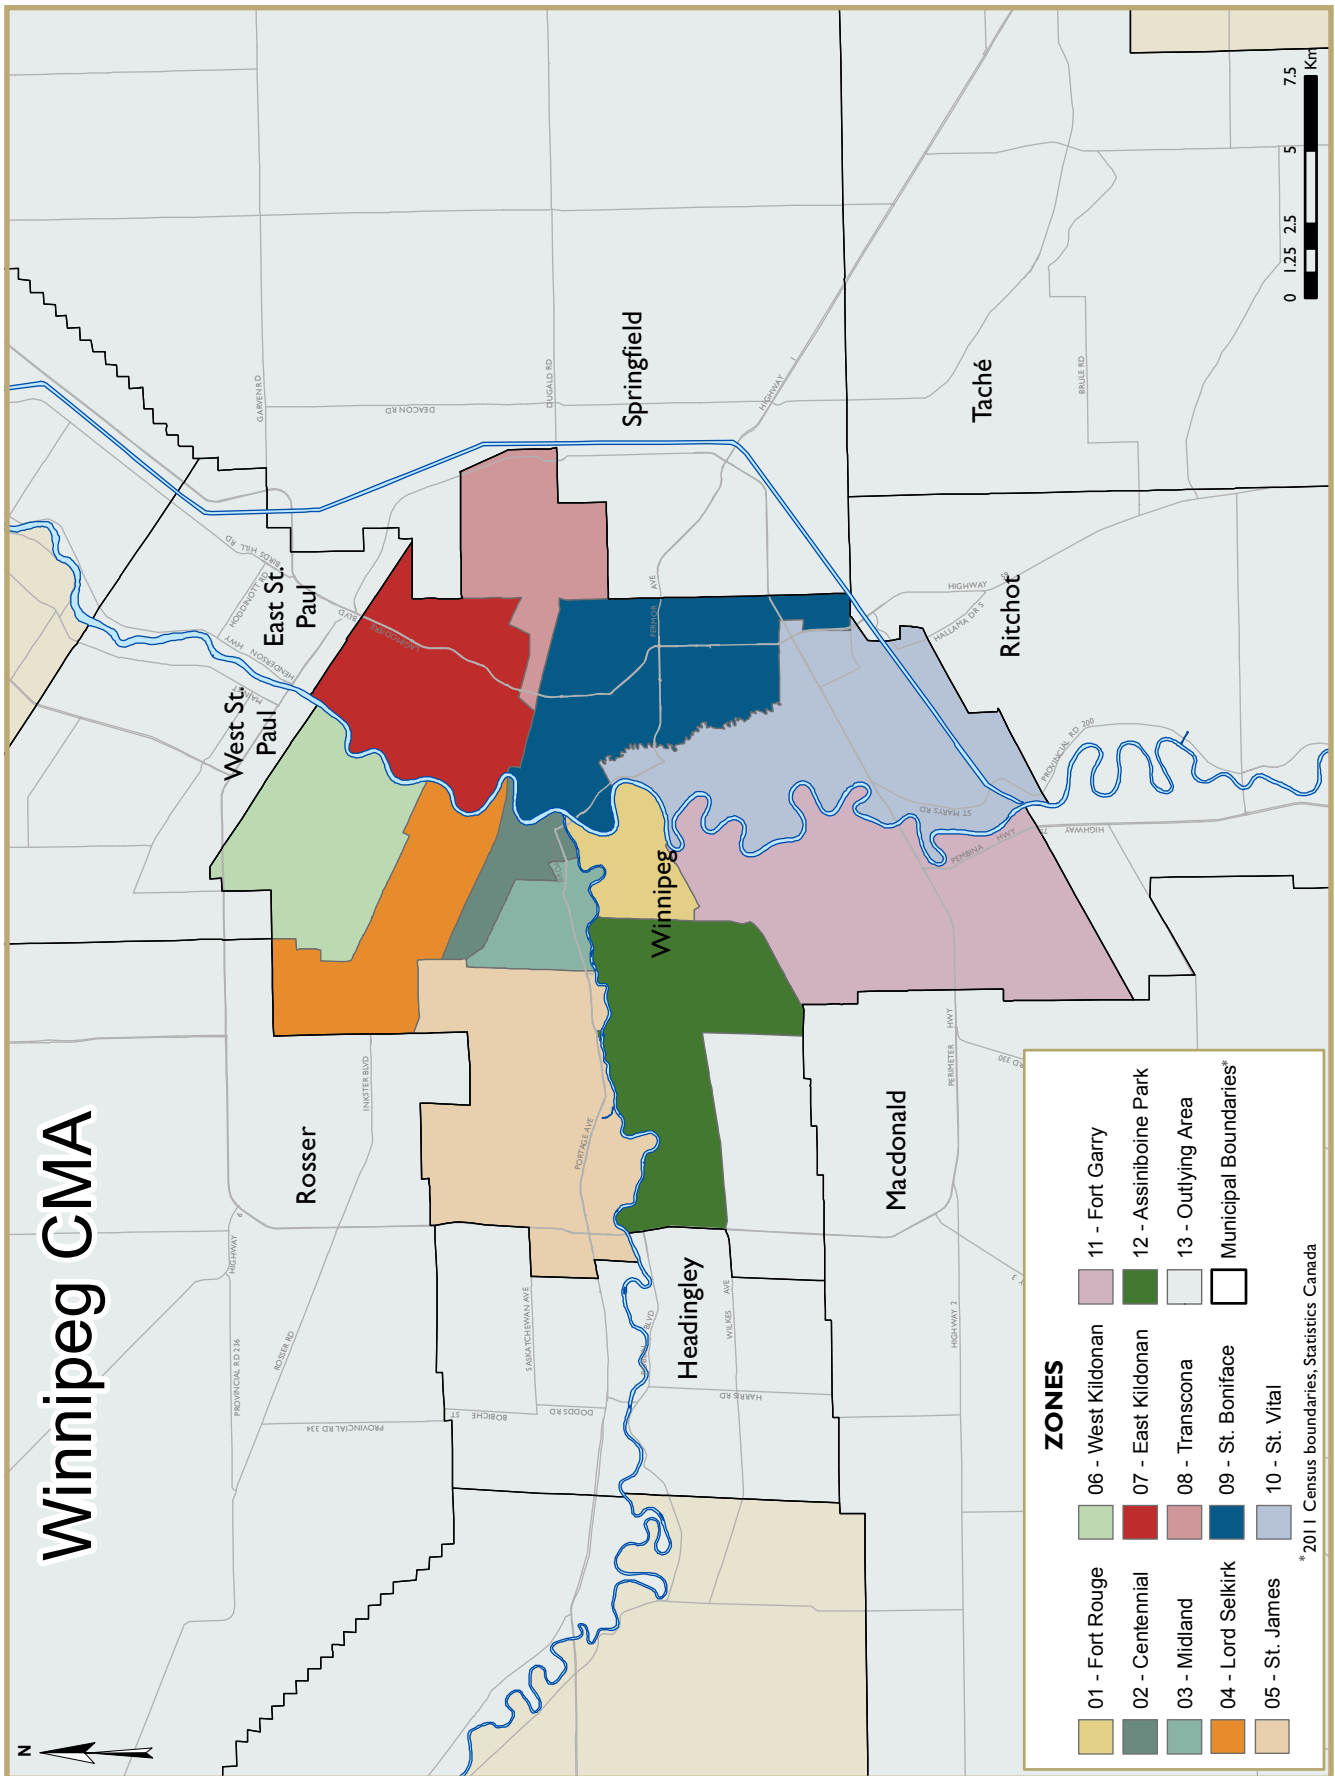

Many of the conditions that contributed to an increase in the vacancy rate during the October 2012 survey period will persist over the next year. High net migration and a growing number of Winnipeggers reaching the household formation stage are providing a steady stream of new renters. Meanwhile on the supply side, the number of units in Winnipeg's rental market universe remains relatively static. Rental starts have been strong, topping 800 units in 2011 and thus far in 2012. However, some of these additions will be offset by losses to the universe as a result of conversion to condominium or demolition. The prime factor leading to modestly higher vacancy rates will

be the continued movement to home ownership, as stable employment, rising earnings, and low mortgage rates will encourage more renters to purchase a home. In addition, Winnipeg is expected to experience a modest decline in net migration over the forecast period which will ease demand for rental units. As a result of more renters vacating their suites, the vacancy rate will rise slightly to approach 2.0 per cent in October 2013.

### Rent increases to continue into 2013

Each year, the Residential Tenancies Branch sets a rent increase guideline which applies to the majority of Winnipeg's rental apartment stock. In 2013, the guideline will limit landlords to a one per cent increase. Average rents, however, are forecast to increase at a rate greater than the guideline for several reasons.

Landlords are able to apply for permission to increase rents above the guideline to cover cost increases. In addition, newly constructed rental units are exempt from the guideline for a period of time, as are units that have undergone renovation. As a result, an increasing proportion of units are exempt from the guideline. Newly constructed and rehabilitated units added to the universe over the next year will command higher rents, which will effectively push up the overall average in excess of the guideline. Under these conditions, the average two-bedroom rent is expected to rise from \$911 in 2012 to \$955 in 2013.

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures. The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented is based on Statistics Canada's 2006 Census area definitions. October 2012 data presented is based on Statistics Canada's 2011 Census area definitions.

### Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

### Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
