

HOUSING NOW

Saguenay CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Third Quarter 2012

New home construction increases

According to the latest data released by Canada Mortgage and Housing Corporation (CMHC), 367 housing units were started in the Saguenay census metropolitan area (CMA) during the second quarter of 2012, compared to 304 in the same period a year earlier.

The results varied with the different market segments. The construction of freehold homes¹ posted a gain of 20 per cent, as a result of semi-detached and row home starts, which more than doubled. As for rental housing, starts were down slightly (-5 per cent) but still reached 80 units. Lastly, foundations were laid for 24 condominiums whereas, normally, very few dwellings of this type are started in the area.

Figure 1

Source: CMHC

¹ Freehold homes refer to dwellings where the owner also holds the title of ownership to the land (single-detached, semi-detached and row houses, as well as duplexes).

Note: Total residential sales

In the Lac-Saint-Jean area urban centres, housing starts fell in all sectors during the second quarter of 2012. The greatest decrease was registered in Dolbeau-Mistassini (with 10 units, versus 43 a year earlier). In Alma, the decline was less marked (79 units, versus 86). Construction got under way on very few homes in Roberval (8 units) and Saint-Félicien (3 units).

The mid-year results show that 501 dwellings were started from January to June 2012, compared to 457 in the first half of 2011, for an increase of 10 per cent. Several factors account for the rise in housing starts, including the tight rental market conditions, low mortgage rates and improved net migration in the area. As well, the mid-year results are in line with our latest forecasts for the area in 2012. Activity registered a significant hike for multiple-unit housing (+64 per cent), while single-detached homes recorded a drop (30 per cent).

Resale market tightens

According to the latest data from the Quebec Federation of Real Estate Boards (QFREB), 498 MLS® transactions were registered in the Saguenay CMA during the second quarter of 2012, for an increase of

8 per cent from the same quarter in 2011. New listings, for their part, rose by 10.6 per cent year over year, while current listings climbed by 9.8 per cent to 922 units on average. Market conditions remained relatively stable since the average seller-to-buyer ratio was 5.6 to 1 in the second quarter, compared to 5.5 to 1 in the same quarter in 2011. Thanks in part to a market favourable to sellers, the average quarterly price climbed by 8 per cent in one year to \$195,768.

The average price calculated using data from the last four quarters was lower however than the average quarterly price previously mentioned, reaching \$185,823 at the end of the second quarter of 2012, compared to \$174,128 at the end of the second quarter of 2011, for a more modest increase of 6.7 per cent. During this period, market conditions still remained favourable to sellers as the average seller-to-buyer ratio was 6.6 to 1, a slight decrease versus the 7 to 1 ratio recorded in the previous quarter.

Figure 3

Calculations: CMHC

* Four-quarter moving average

In the single-family housing segment, MLS® sales reached 420 units in the second quarter, up 7.4 per cent from the same quarter in 2011. Active listings grew at a similar pace (7.9 per cent) to 713 units. This helped maintain some stability on the market. The average seller-to-buyer ratio for the last four quarters was 6.2 to 1 in this market segment compared to 6 to 1 a year earlier. Finally, the average price reached almost \$186,000, an increase of 7 per cent year over year.

In the two – to five-unit plex segment, conditions were slightly softer than in the single-family housing segment. The average seller-to-buyer ratio for the last four quarters was 6.7 to 1, down slightly from 6.9 to 1 a year ago. The average price for the first six months of the year grew by 6.5 per cent, which is significantly less than the increase recorded in the single-family housing segment.

In the condominium segment, the seller-to-buyer ratio pointed to a buyer's market. The average for the last four quarters was 11.2 to 1 versus 10.7 to 1 in the same period 12 months earlier. It is not at all surprising that the increase in the average price over the first six months of the year, at 3.5 per cent, was less significant than in the two market segments previously mentioned.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
