

RENTAL MARKET REPORT

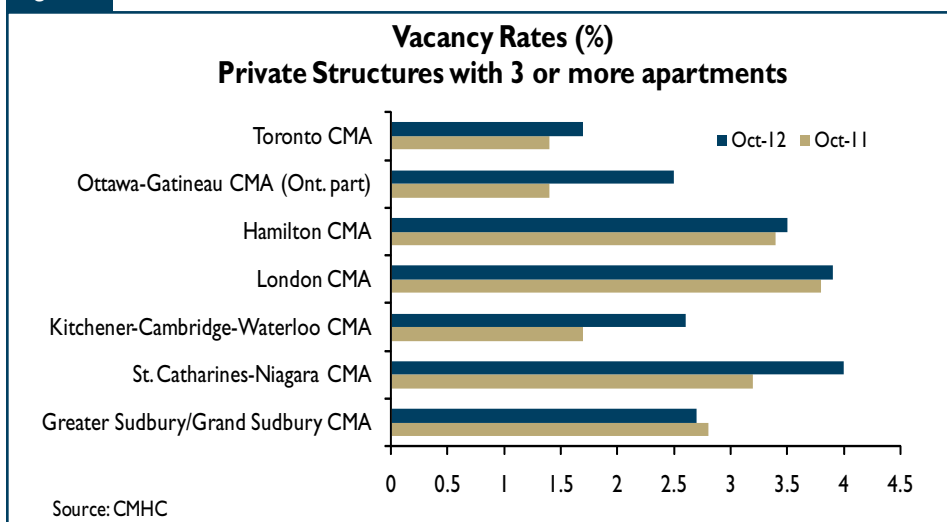

Ontario Highlights*

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2012

Figure 1

Highlights

- Ontario vacancy rate rises to 2.5 per cent from 2.2 per cent in October 2011.
- Fixed sample 2-bed apartment rents grew at a rate of 2.7 per cent in the fall of 2012 - outpacing growth in 2011.
- Notable factors exerting upward pressure on vacancy rates include: weak employment growth particularly for 15-24 age group, declining in-migration, increased rental completions.
- Notable factors exerting downward pressure on vacancy rates include: less first time buyer demand and improving employment conditions for residents aged 25-34.

Figure 2

*Only centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAAs.

According to Canada Mortgage and Housing Corporation's (CMHC) Fall 2012 Rental Market Survey, Ontario vacancy rates¹ edged higher to 2.5 per cent in October 2012, up from 2.2 per cent in the fall of 2011. But while vacancy rates moved up they still remained close to recent decade lows. Vacancy rates moved higher for most bedroom types particularly 2 and 3-bedroom apartment units. With the exception of Windsor, Peterborough, Hamilton, London, Thunder Bay and Sudbury, vacancy rates moved higher in other centres. The lowest vacancy rate was registered in Thunder Bay and Toronto while the highest vacancy rates were registered in Windsor, St. Catharines-Niagara and London.

Factors exerting upward pressure on vacancy rates

A number of factors exerted upward pressure on vacancy rates. Modest job growth, particularly in regions outside of northern and south western Ontario, dampened both ownership and rental demand since the fall of 2011. According to the 2011 census, Ontario ranks first among Canadian provinces as the region with the highest share of young residents living at home. Job prospects for youth aged 18 to 24 remained particularly soft as Ontario businesses were reluctant to hire in the face of global economic uncertainty. Weaker job prospects discouraged some young Ontarians from leaving the parental home. Due to the high propensity to rent for this segment of the population, this had a dampening effect on demand for rental accommodation.

Softer net migration to Ontario was a second factor dampening demand for

rental accommodation. Net migration into Ontario has slowed sharply since 2010 largely due to lower immigration and rising migratory outflows to other provinces. Most immigrants rent upon immediate arrival into Ontario as they lack the credit and job history to qualify for mortgage financing. Meanwhile, Ontario lost far more migrants to other provinces in 2012 than it did in the previous year. Relatively stronger job growth in resource producing regions has encouraged both Canadian born and newly arrived immigrants to leave the province in search of job opportunities elsewhere causing some to vacate existing rental space.

The rising cost of home ownership combined with a downward trending vacancy rate since 2004 triggered strong rental construction in recent years. Some of these units have reached completion in 2012. While rising rental completions in the primary and secondary market had little effect on the overall vacancy rate, some segments were impacted more than others. Newly completed rental units typically are priced much higher and compete directly with larger higher priced primary rental units. In fact, vacancy rates for higher priced primary units moved higher in some major Ontario markets as new supply exerted competitive headwinds for existing landlords.

Factors exerting downward pressure on vacancy rates

A sluggish US economic recovery coupled with concerns about growth in China and Europe generated a cloud of uncertainty over financial

markets in 2011 and 2012. Economic uncertainty encouraged more risk-averse behaviour in financial markets which spilled into the Ontario real economy over the past year. Evidence of this behaviour includes provincial economic accounts data that suggests more households postponed big ticket durable goods consumption. Declining appetite for discretionary spending was further evident as lower priced rental apartment units experienced improving demand conditions while demand eased for larger higher priced rental units. Consequently, renter households considering the jump to more expensive ownership housing likely postponed this decision.

The rising cost of ownership housing since the fall of 2011 was another factor supporting rental demand. Many prospective renter households took advantage of lower prices and low interest rates in recent years and bought for the first time. However, rising home prices dampened demand for ownership housing in the past year. First time buyers aged 25-44 are relatively more sensitive to changing economic conditions. Most first time buyers, some of which currently rent, postponed a home purchase and remained in rental accommodation as they were unable to substitute into a lower priced home and had difficulty saving enough for their down payment. Other young adults currently living in the parental home in the cohort aged 25-34 were also less able to access ownership housing. Improving job prospects for this group however allowed them to leave the parental home and move into more inexpensive rental accommodation - exerting downward pressure on vacancy rates for less expensive units.

¹ Based on privately-initiated rental apartments structures of three or more units.

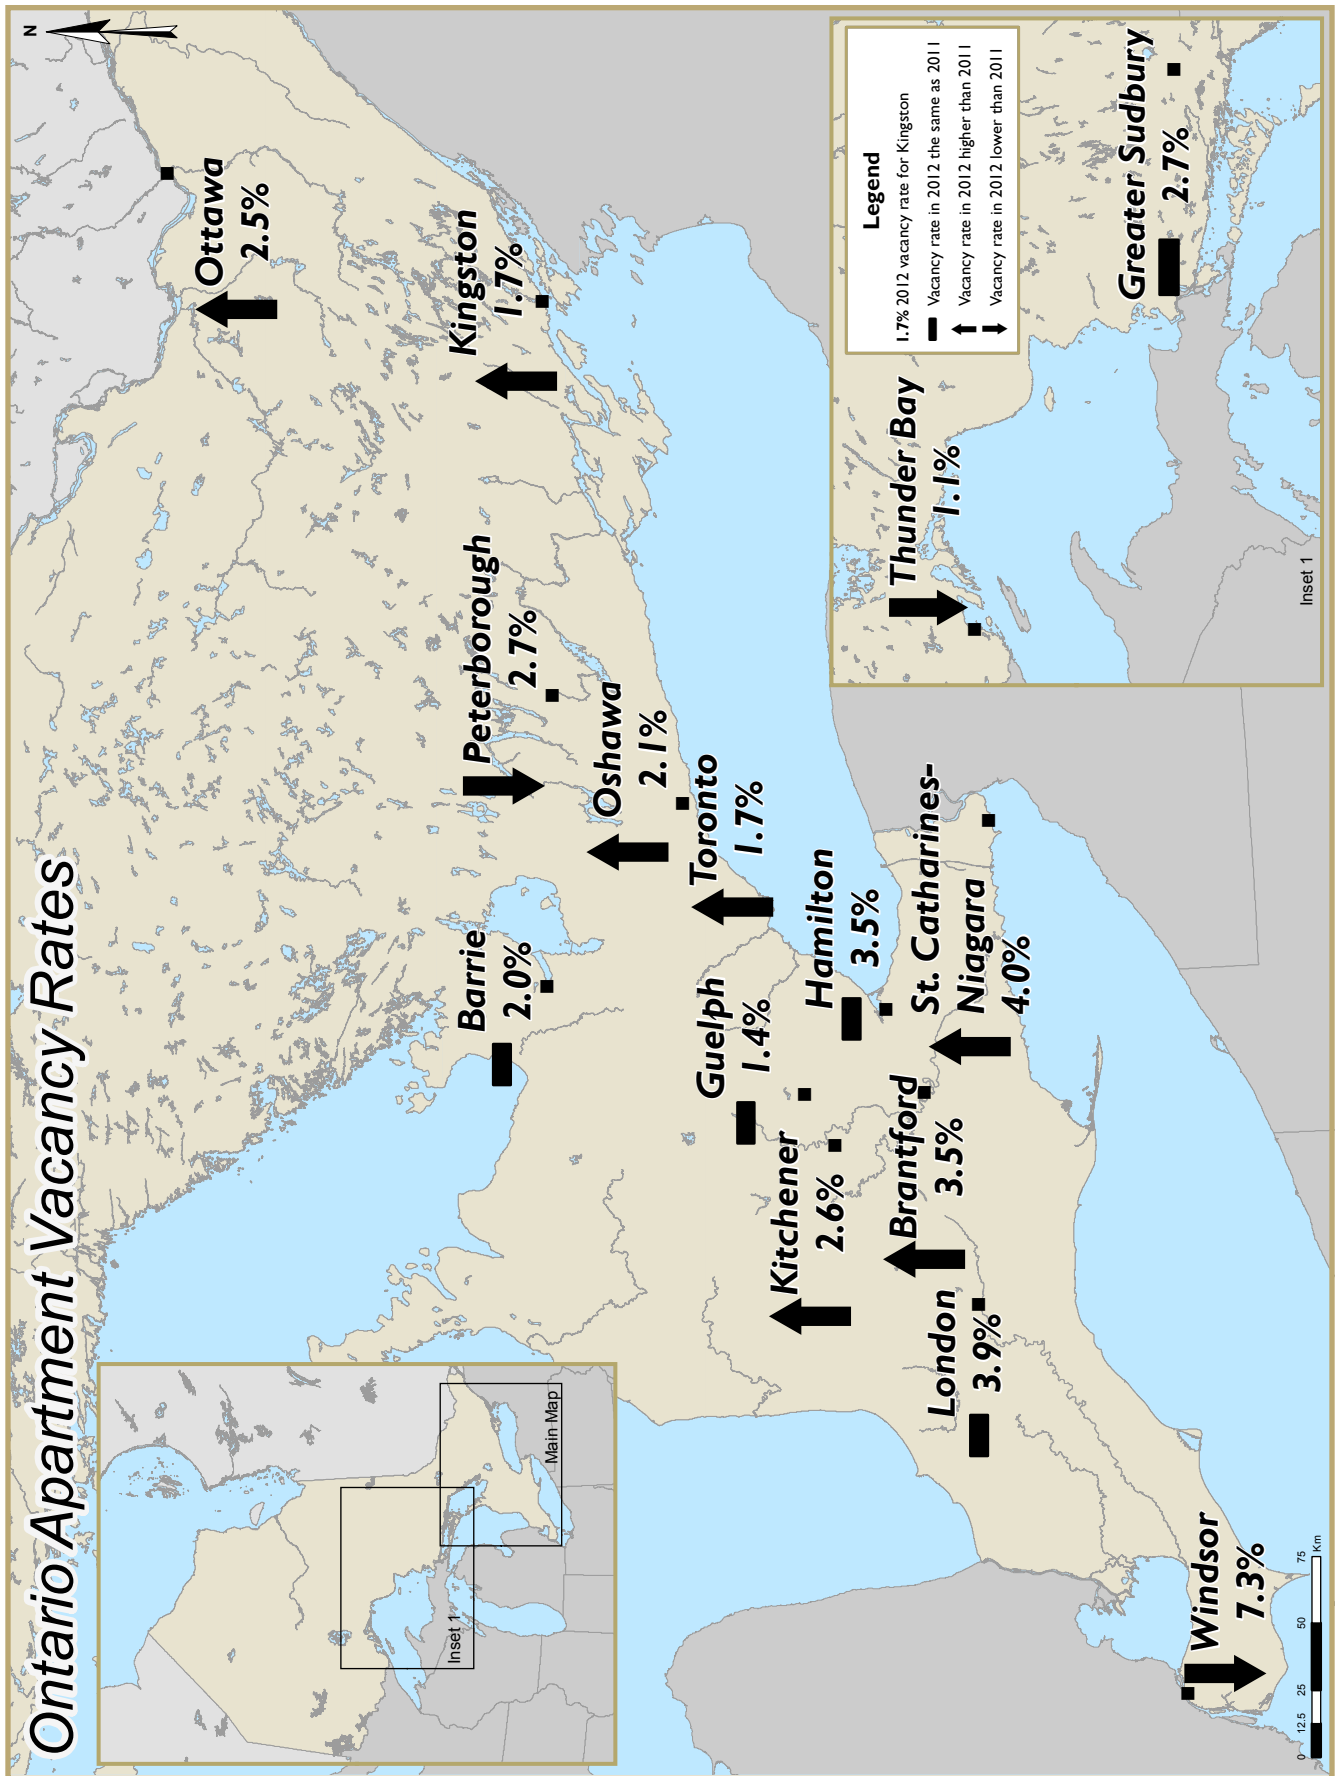

Ontario rents grow faster in October 2012

Apartment rents for 2-bedroom units that were common to both 2011 and 2012 fall surveys² rose by 2.7 per cent. This rate of increase in rents exceeded the 1.8 per cent increase registered in the fall of 2011. This fall's stronger increase was largely due to rents that were constrained last fall given a much

lower allowable guideline increase. Nevertheless, Ontario apartment rents grew at a slower rate this year versus the allowable Ontario rent review guideline amount of 3.1 per cent. However the story was mixed across the province. Rental demand rose in Sudbury and Thunder Bay allowing rents to increase well above the guideline amount. A relatively stronger Northern Ontario economy enabled landlords to fill available units

with greater ease. Meanwhile larger markets such as Toronto and Ottawa saw increases below the guideline amount as landlords found filling vacant units a bit more difficult in the face of rising competition from new rental supply.

² When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2010 and 2011 Fall rental market surveys, we can get a better indication of actual rent increases paid by most tenants.

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures. The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented is based on Statistics Canada's 2006 Census area definitions. October 2012 data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
