

RENTAL MARKET REPORT

Prince Edward Island Highlights*

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Spring 2012

Figure 1

Island Vacancy Rates Remain Relatively Stable

- The overall vacancy rate in Prince Edward Island's urban centres remained relatively stable at 4.8 per cent in April 2012.
- At 5.0 per cent, the Charlottetown area posted a higher vacancy rate than the provincial average.
- The average two-bedroom rent in Charlottetown was \$797, compared to the provincial average of \$778.

Figure 2

*Only centres with a population of 10,000 + are included in the survey.

Overview

Results from Canada Mortgage and Housing Corporation's 2012 Spring Rental Market Survey revealed that the vacancy rate¹ for provincial urban centres² remained relatively unchanged at 4.8 per cent compared to spring 2011. Individual results for Charlottetown and Summerside resulted in small changes in the number of vacant units in both centres.

Vacancy Rate Trends

Last year, the Charlottetown area recorded an increase in the number of vacant apartment units, despite increased demand due to strong population growth. Demand was partially offset by increases in new supply in the Charlottetown area as the fast pace of new rental construction continued. During the past twelve months, local developers have added nearly 250 new rental units to the market which is well above the annual average of 75 new units. After increasing in 2011, the vacancy rate in Charlottetown remained higher in 2012 at a relatively unchanged rate of 5.0 per cent.

In Summerside, the level of construction of new rental projects has also been above average during the past two years. However, given the timing of the projects and the completion dates, the vacancy rate in Summerside remained relatively unchanged at 3.5 per cent in April 2012. While there was little change compared to 2011, the vacancy rate is well below the rate of 6.7 per cent that was reported in the spring of 2010.

As in many rental markets, two-bedroom units account for the vast majority of rental apartment units in the urban centres of Prince Edward Island. In Charlottetown, the vacancy rate for two-bedroom units was relatively unchanged at 5.4 per cent compared to 2011. However the rate has increased significantly compared to the rate of 2.7 per cent recorded in April 2010. The reverse was true in Summerside. While the vacancy rate for two-bedroom units was also relatively unchanged compared to last year, it has declined to 3.7 per cent in April 2012 compared to 7.0 per cent in April 2010.

Average Rents

The overall average rent in the Charlottetown area was \$755, while the average two-bedroom rent was \$797 in the spring of 2012. In Summerside, the overall average rent was \$669 compared to the two-bedroom average of \$690.

This year's overall average rent increased 2.6 per cent based on structures common to both the 2011 and 2012 spring surveys³. The increase was not unexpected as the Island Regulatory and Appeals Commission (IRAC), which manages residential rental increases, allowed increases of 2.0 per cent and 1.0 per cent for heated and unheated units, respectively, during 2011. The increase above the amount allowed by IRAC, was the result of the newly constructed units completed in 2009 and 2010. These units, in general, are at the higher-end of the market and offer a larger living space

and additional amenities, but also command a higher than average rent.

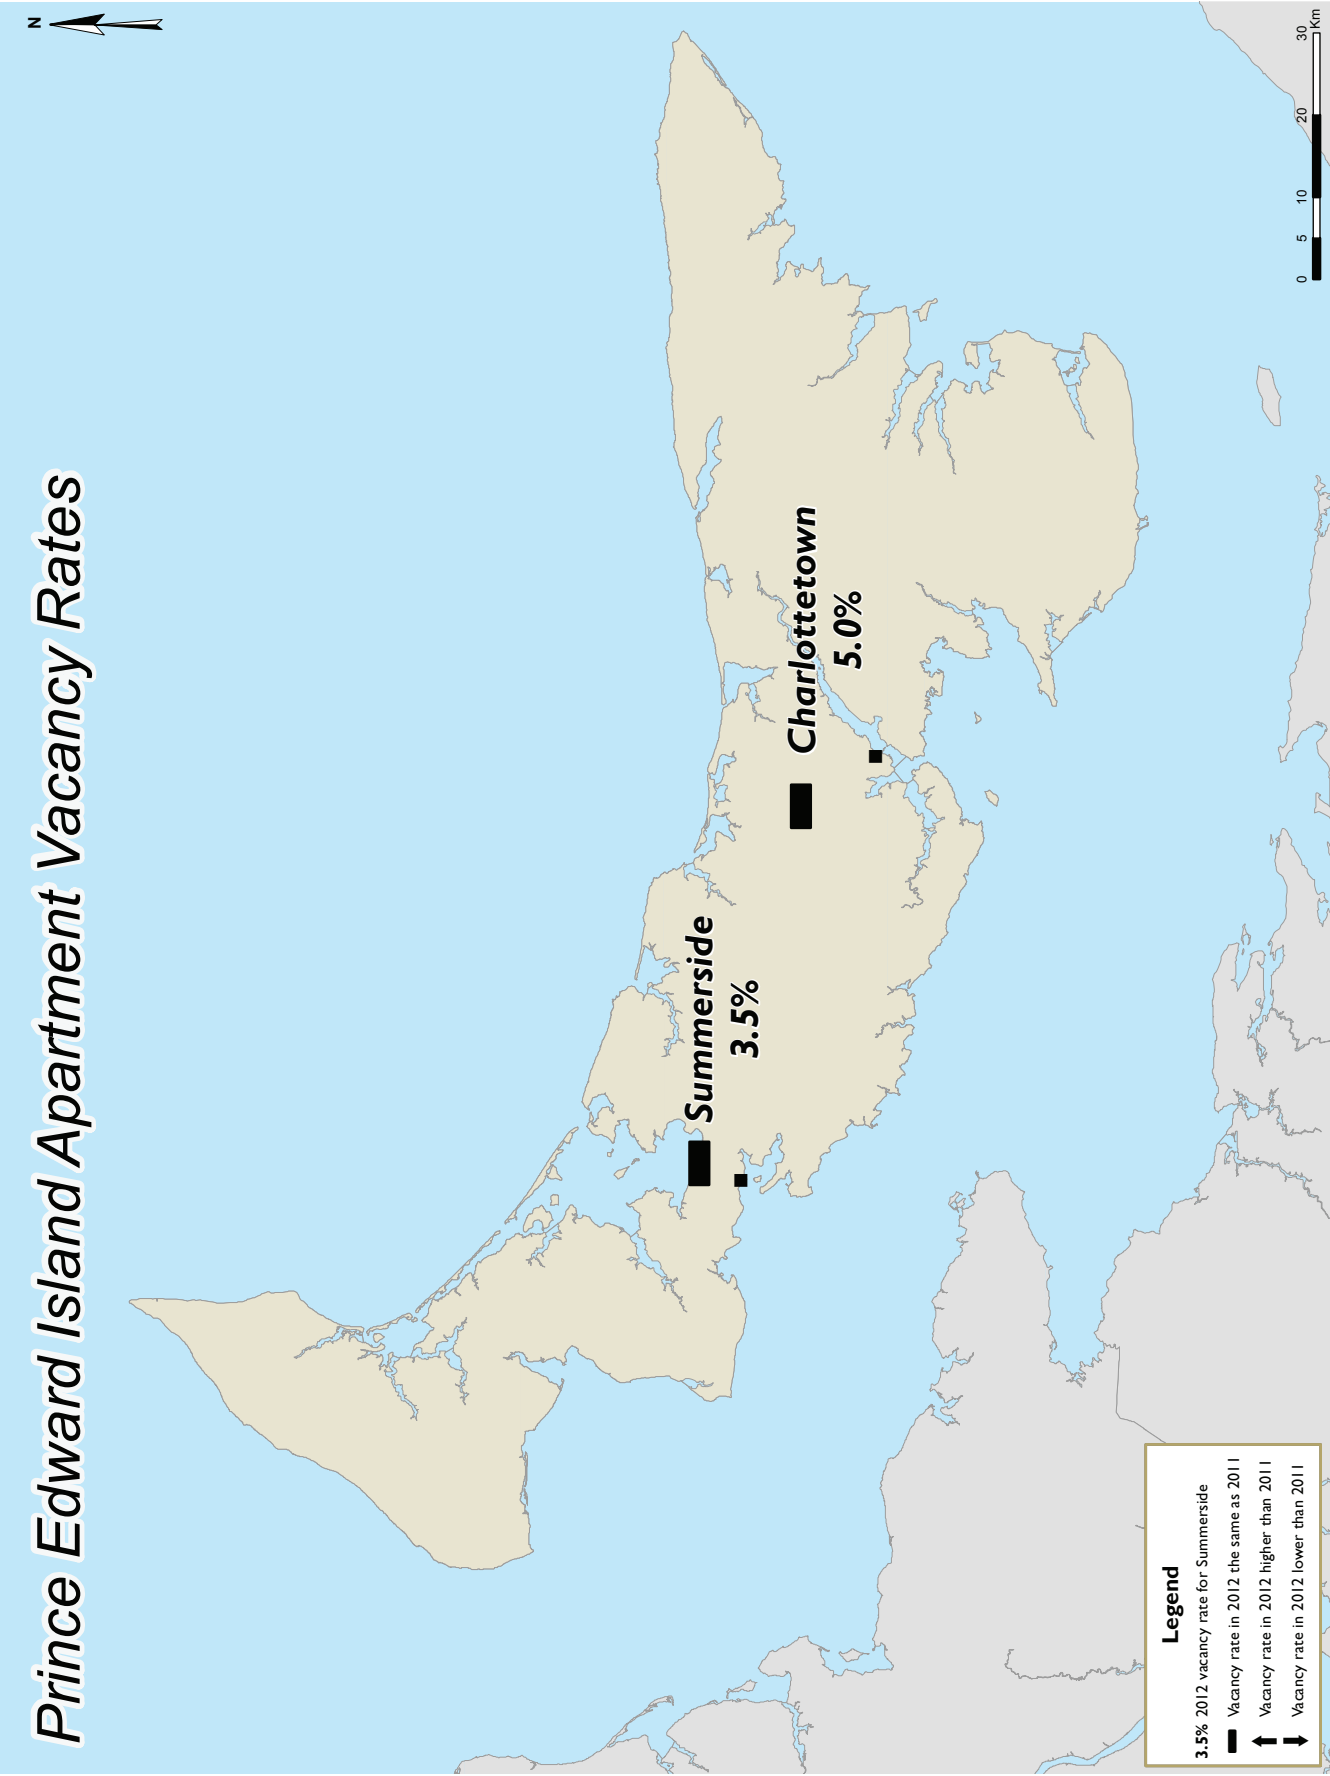

Availability Rates

The availability rate for the urban centres in Prince Edward Island was at 5.9 per cent in April 2012. At 3.5 per cent, Summerside posted a lower availability rate than the provincial average, while Charlottetown posted a higher rate at 6.4 per cent.

¹ Based on privately-initiated rental apartments structures of three or more units.

² Urban centres are defined as centres with a population of over 10,000. Census metropolitan areas (CMA) are based on Statistics Canada definition.

³ When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2011 and 2012 Spring rental market surveys, we can get a better indication of actual rent increases paid by most tenants.

I.1.1 Private Apartment Vacancy Rates (%) by Bedroom Type Prince Edward Island

Centre	Bachelor		1 Bedroom		2 Bedroom		3 Bedroom +		Total	
	Apr-11	Apr-12	Apr-11	Apr-12	Apr-11	Apr-12	Apr-11	Apr-12	Apr-11	Apr-12

1.1.5 Private Apartment Estimate of Percentage Change (%) of Average Rent¹ by Bedroom Type Prince Edward Island

Centre	Bachelor		1 Bedroom		2 Bedroom		3 Bedroom +		Total	
	Apr-10 to Apr-11	Apr-11 to Apr-12	Apr-10 to Apr-11	Apr-11 to Apr-12	Apr-10 to Apr-11	Apr-11 to Apr-12	Apr-10 to Apr-11	Apr-11 to Apr-12	Apr-10 to Apr-11	Apr-11 to Apr-12
Charlottetown CA	++	3.7 d	2.5 b	2.7 c	2.0 c	2.5 c	++	++	1.7 c	2.8 b
Summerside CA	5.8 d	2.8 c	**	++	6.3 c	1.5 a	++	++	5.9 c	1.5 a
Prince Edward Island 10,000+	++	3.5 d	3.2 c	2.4 c	2.6 b	2.3 b	++	++	2.4 b	2.6 b

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

Please click [Methodology](#) or [Data Reliability Tables Appendix](#) link for more details

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented in this publication is based on Statistics Canada's 2006 Census area definitions. April 2012 data presented in this publication is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, and building superintendents throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
