* Only centres with a population of 10,000 + are included in the survey.

Highlights

- The average vacancy rate in privately initiated buildings with three units or more was 2.2 per cent in April in urban areas (10,000 inhabitants or more) of Quebec
- With the exception of the Saguenay region, the survey reveals no significant movements of magnitude at the CMA level.
- The market remains tight in the larger apartment segments.
- The average rent is \$677 for two bedroom apartments. At the CMA level, the average rent ranges between \$543 and \$731.
- The spring 2012 survey reflects unchanged levels of supply and demand.

Stability of vacancy rates in Quebec

According to the Spring Rental Market Survey conducted by Canada Mortgage and Housing Corporation (CMHC), the average vacancy rate¹ for privately initiated structures with three units or more was 2.2 per cent in April in urban areas² (10,000 inhabitants or more) of Quebec. The decline, of 0.2 points over the same period last year, was not statistically significant.

This result is largely due to the influence of the census metropolitan area (CMA) of Montreal - which represents two-thirds of Quebec's rental stock - but also to other areas of the province.

With the exception of the Saguenay region, the survey reveals no significant movements of magnitude at the CMA level. With respect to other urban areas, the survey reported a slightly higher rate (2.8 per cent) in urban areas of 10,000 to 49,999 inhabitants and a rate of 3.1 per cent for agglomerations 50,000 to 99,999 inhabitants (see table).

Again this year, the market profile according to the unit size remains fairly uniform across the province and has not changed much in recent years: the market is tighter in the segment of large apartments. Indeed, the vacancy rate is significantly lower for apartments with two and three bedrooms (2.0 per cent and 1.6 per cent respectively) than for the bachelor units (3.7 per cent). However, even if rates have not significantly changed since last spring, the gap between these segments is reduced.

The average rent is estimated at \$677 for two bedroom apartments. With regard to the CMAs, the average rent ranges between \$543 and \$731. As for other urban areas the average rent is situated at the lower end of this interval. The picture of rents by unit size is in line with their relative availability. The survey often shows that the average rent climbing by about \$100 with the addition of a bedroom.

Again this year, the relative stability of vacancy rates across the province reflects unchanged levels of supply and demand. On the supply side, no significant increase has been observed, as developers prefer the condominium market segment. On the demand side strong immigration levels were offset by weaker youth employment.

Montréal

Like the province, the same key factors have resulted in a stable vacancy rate in Greater Montreal: it went from 2.5 per cent in April 2011 to 2.2 per cent in April 2012. The large Apartments are the most popular. Indeed, the vacancy rate for bachelor units was higher (3.9 per cent) than that observed in homes with a larger number of rooms (2.2 per cent for one-bedroom, 2.0 per cent for those two bedrooms and 1.2 per cent for three-bedrooms). For its part, the average rent for two bedroom units came in at \$708 in April 2012.

Québec

In the Québec CMA, the vacancy rate remained stable as well this spring. It stood at 0.7 per cent. It is also the case for one-bedroom units or more. However, the bachelor market

segment has tightened, as the vacancy dropped from 3.0 per cent in spring 2011 to 0.9 per cent in April this year. However, there will likely be more movement this year as the availability rate rose to 4 per cent, which means that on average four out of 100 were apartments available for rent in April, compared to 2.8, the previous year. The average monthly rent for a two bedroom apartment reached \$725 this spring.

Gatineau

The vacancy rate has remained relatively stable in the Gatineau region between 2011 and 2012 (from 2.2 to 2.1 per cent this year). This result also reflects the situation by unit size, where the proportion of unoccupied dwellings has remained virtually unchanged. This stability of the rental market due to the fact that supply and demand of rental apartments experienced a similar increase during the past year. While the stock of rental units progressed about 2 per cent, as demand continued to be fuelled by the many newcomers in the region.

Sherbrooke

In the Sherbrooke area, the vacancy rate stood at 3.6 per cent this spring. It remained virtually unchanged from the previous year (3.7 per cent in April 2011). This is the second highest CMA vacancy rate after Trois-Rivières. In addition, the availability rate stood at 8 per cent, the highest of the CMA, indicating that a higher proportion of renters said they will not renew their lease. The average rent went from \$577 to \$581 in April 2012. Since the vacancy rate is higher in recent years, it is not surprising to observe a slowdown of rental rates.

¹ Based on privately-initiated rental apartments structures of three or more units.

² Urban centres are defined as centres with a population of over 10,000. Census metropolitan areas (CMA) are based on Statistics Canada definition.

Trois-Rivières

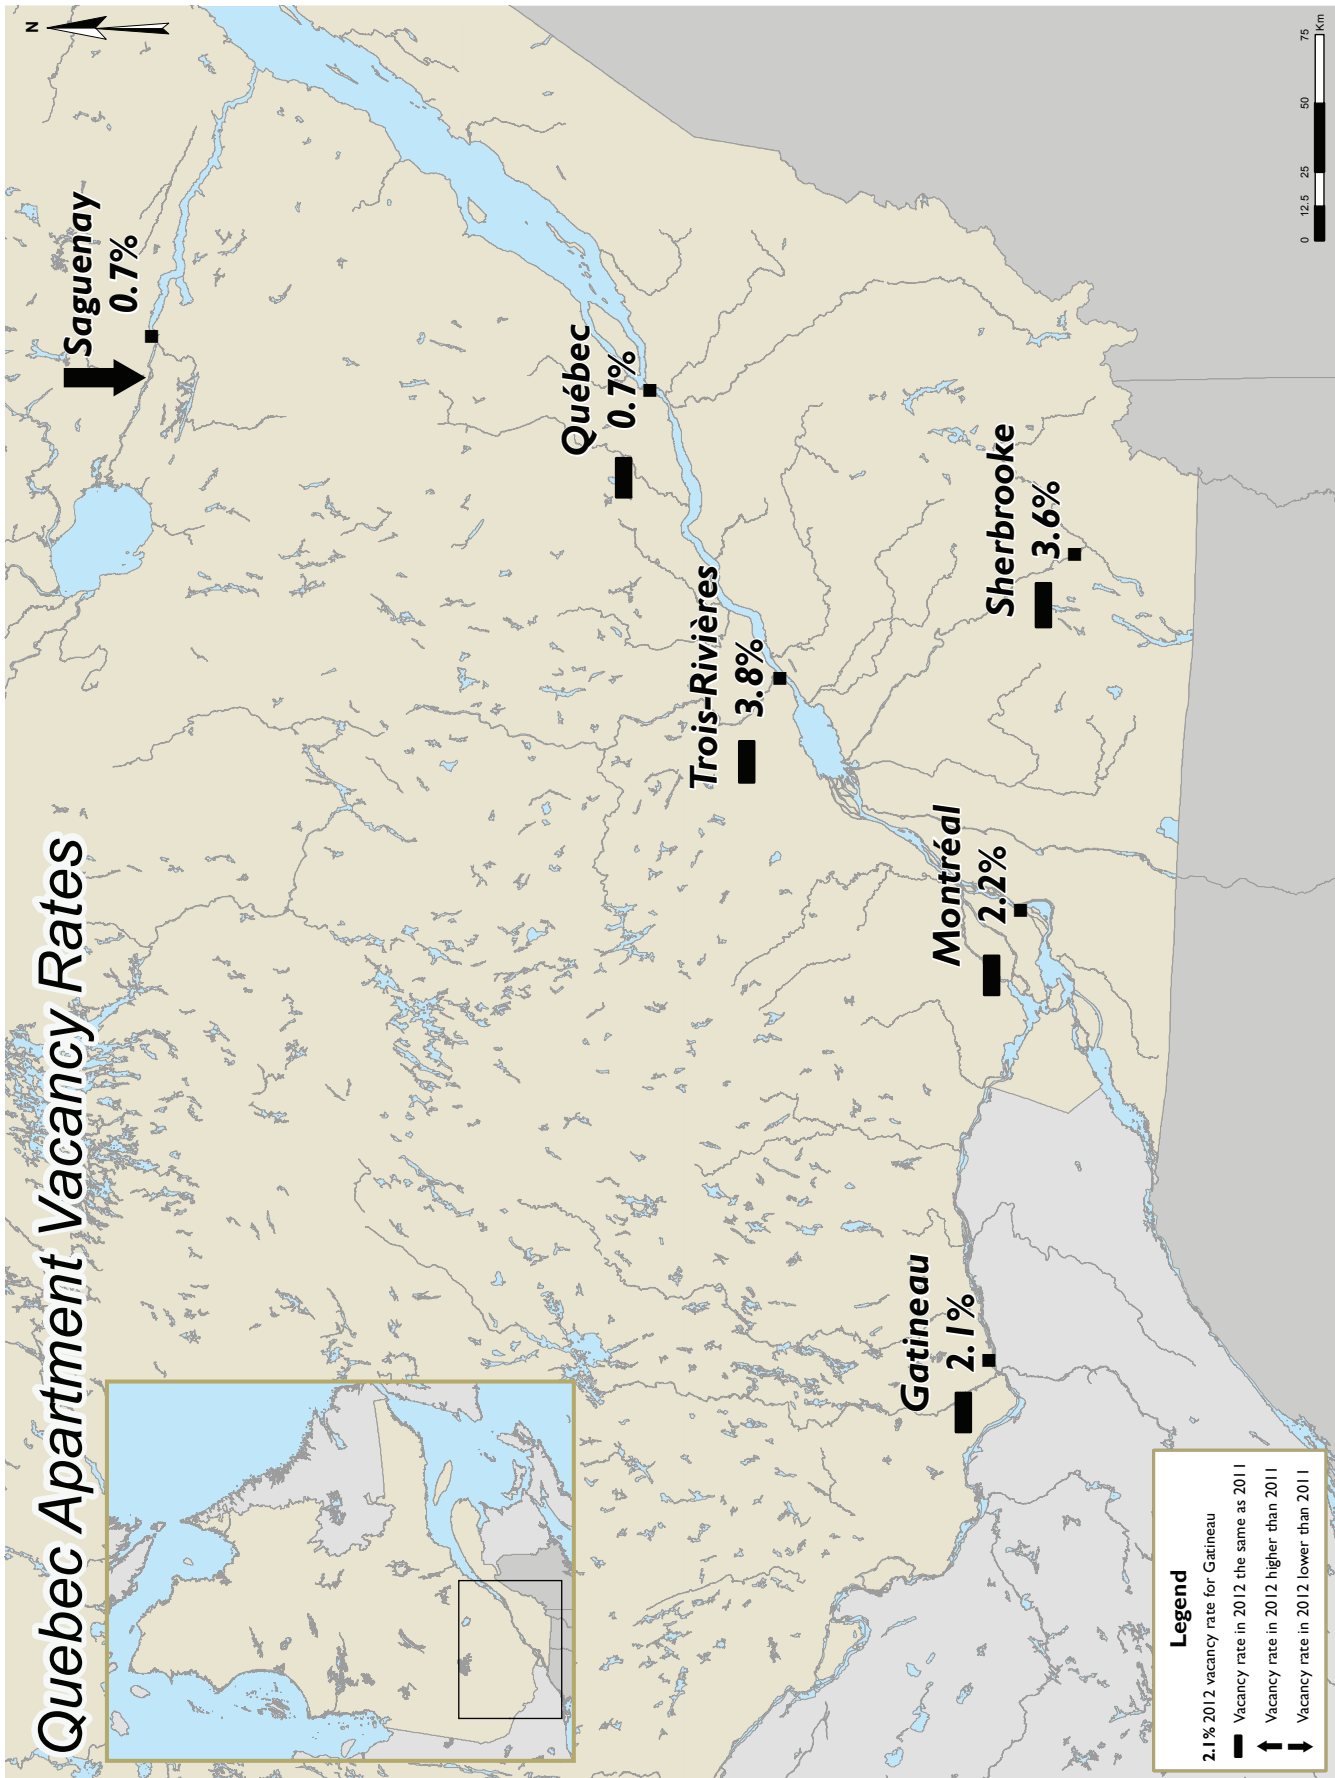

The situation of the rental market has remained stable in the Trois-Rivières (vacancy rate of 3.8 per cent). In April 2012, the larger dwellings are those that exhibited relatively tighter conditions. Thus, the vacancy rate reached 2.6 per cent for 3-bedroom apartments and more, 3.7 per cent for two-bedroom apartments and 4.4 per cent for one bedroom apartments. The rent increases were a reflection of these less tight conditions. In April

2012, the estimated change in the average rent was well established at 1.9 per cent. The average rent for two bedroom apartments was \$543 in the CMA.

Saguenay

Going from 1.9 per cent in the spring of 2011 to 0.7 per cent this year, the vacancy rate in the region of Saguenay is the only one to record a significant change. The category of one-bedroom apartments was the

only one to display some availability. This situation is observable in all market segments and is attributable to a relatively strong demand from young workers and retirees. The supply side was limited by a sharp slowdown in construction since 2010. As for the average rent, it stood at \$553 for two bedroom apartments. A recent increase in housing starts will raise the vacancy rate in this market.

1.1.5_2 Private Apartment Estimate of Percentage Change (%) of Average Rent¹ by Bedroom Type Québec – Abitibi-Témiscamingue

Centre	Bachelor		1 Bedroom		2 Bedroom		3 Bedroom +		Total	
	Apr-10 to Apr-11	Apr-11 to Apr-12	Apr-10 to Apr-11	Apr-11 to Apr-12	Apr-10 to Apr-11	Apr-11 to Apr-12	Apr-10 to Apr-11	Apr-11 to Apr-12	Apr-10 to Apr-11	Apr-11 to Apr-12
Amos CA	9.2 b	-4.2 c	6.7 b	-1.7 c	8.6 a	-0.5 b	6.3 b	++	8.5 a	-0.5 b
Rouyn-Noranda CA	3.9 d	**	3.4 c	3.1 c	3.6 b	3.2 c	**	5.0 c	3.3 b	3.4 b
Val D'Or CA	7.6 b	**	4.2 c	1.0 d	6.9 b	-1.2 d	4.2 b	++	5.6 a	-1.5 a

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented in this publication is based on Statistics Canada's 2006 Census area definitions. April 2012 data presented in this publication is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, and building superintendents throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
