Highlights

■ The overall vacancy rate in Quebec's urban centres rose slightly (3.0 per cent in October 2012).

■ All CMAs in Quebec, except Sherbrooke, registered statistically significant increases in their vacancy rates.

■ Only 25 per cent of Quebec's agglomerations with 10,000 to 99,999 inhabitants posted decreases in their vacancy rates.

■ The average rent for existing housing units rose by 0.7 per cent over 2011.

■ The Saguenay and Québec metropolitan areas still had the lowest vacancy rates among the CMAs in the province (2.0 per cent in both cases).

HOME TO CANADIANS

Market conditions eases in several urban centres

According to the results of the Rental Market Survey conducted by Canada Mortgage and Housing Corporation (CMHC), the overall vacancy rate for Quebec's urban centres rose slightly over October of last year, having reached 3.0 per cent in 2012, compared to 2.6 per cent in 2011.

As expected, the increase reflected the situation observed in the province's census metropolitan areas (CMAs) as a whole. In addition, all CMAs in Quebec, except Sherbrooke, registered statistically significant increases in their vacancy rates. Elsewhere across the province, only 25 per cent of Quebec's agglomerations with 10,000 to 99,999 inhabitants posted decreases in their vacancy rates.

Certain factors reduce rental housing demand

While the changes in rental market conditions across Quebec continued to reflect the effects of the fundamentals on supply and demand, the diverse prevailing environments were such that these impacts varied depending on the areas. Rental housing supply remained generally stagnant in several large urban centres in Quebec over the past year. Investors still prefer the more profitable condominium and retirement home segments. Nonetheless, several agglomerations registered increases in supply that affected their markets.

Over the same period, demand, while having remained strong, likely softened on account of the greater movement to homeownership and the formation of fewer young renter households.

The increase in the homeownership trend was attributable in part to the condominium market, while the decrease in household formation was directly related to the easing of the job market for young people. As with supply, there were regional differences in demand, particularly in a number of smaller agglomerations, where favourable economic conditions attracted migrants (boosting rental housing demand).

Market conditions ease for most market segments

Once again this year, the vacancy rate distribution by bedroom type still suggested that demand remained less strong for bachelor units. This was related to the lower household formation, itself linked to the reduced access to the labour market.

Meanwhile, demand for larger apartments benefited from sustained net migration and the effect of some substitution between starter homes (bungalows, condominiums) and larger apartments. According to the survey results, a gap of two percentage points separates the vacancy rate for bachelor apartments from the rate for two-bedroom and three-bedroom units. Contrary to last year, this year's survey results revealed softer conditions in most market segments, including two-bedroom units.

Rents

The average rent for all Quebec urban centres reached $662 in October this year. The averages were about $515 for bachelor apartments and nearly $800 for units with three or more bedrooms. While the provincial average generally reflected the situation for CMAs as a whole, the Montréal, Québec and Gatineau areas

stood out with average rents hovering around $700, whereas the other three CMAs had monthly averages of around $550.

Once again this year, the provincial average rent was about $100 higher than the average for centres with 50,000 to 99,999 inhabitants and about $150 higher than the average for the smaller agglomerations. In these smaller centres, a large share of landlords charged rents varying between $450 and $600.

When excluding new structures, it is estimated that, since October 2011, the average rent in Quebec has risen by 0.7 per cent. Last year at the same time, the estimated change at the provincial level was 2.6 per cent over October 2010. The smaller increase this year was probably not unrelated to the easing observed on several markets this year. The fact that all market segments registered similar slowdowns supports this assumption. The survey results revealed that the rates for all market segments were identical to the rate for the province overall.

Rental condominiums

For several years now, CMHC has been conducting a survey of the secondary rental market—a noteworthy market, given the greater popularity of the condominium tenure option in the province's major centres.

In the Montréal CMA, about 11 per cent of the condominiums were rental units in October 2012, a slightly higher proportion than that estimated last year (9.3 per cent). While the condominium housing stock grew in Montréal, the number of rental units also increased in the metropolitan area. As well, the vacancy rate for these dwellings, which had fallen from

4.2 per cent in 2010 to 2.8 per cent last year, remained relatively stable, at 2.7 per cent, this year, reaching a level comparable to the rate on the purpose-built rental market (excluding the retirement home segment).

In the Québec CMA, the condominium housing stock also increased over last year. And likewise, the number of rental units grew, as well, such that their proportion of the total rose (from 6.3 per cent in 2011 to 9.0 per cent in 2012). The vacancy rate remained unchanged this year from 2011 (at 2.2 per cent) and comparable to the rate on the purpose-built rental market (2.0 per cent).

As for the differences in average rents between two-bedroom rental condominiums and purpose-built rental housing units of the same bedroom type, the gap was generally wider in the Montréal CMA (44 per cent) than in the Québec CMA (38 per cent). This notable gap is explained by the fact that the condominium rental stock is relatively newer and generally more upscale than the purpose-built market (excluding retirement homes).

Around the province

In the Montréal CMA, the vacancy rate reached 2.8 this year, compared to 2.5 per cent in October 2011. This small increase reflected a context where demand and supply changed little relative to the prior year. In 2012, demand for rental housing, while supported by net migration, was limited by the still strong movement to homeownership and the sluggish job market conditions for young people aged from 15 to 24. On the supply side, very few new units have been added to the rental housing stock in recent years.

The average apartment rent for all unit types combined reached $692. The estimated change in the average apartment rent between October 2011 and October 2012 was 0.8 per cent.

The results of the October survey showed that the market eased for a third straight year in the Québec CMA, as the vacancy rate increased from 1.6 per cent last year to 2.0 per cent this past fall. With rental housing starts rising in 2009 and 2010, the market has since eased somewhat. Between 2006 and 2008, the CMA market had tightened to the point that the vacancy rate had fallen to 0.6 per cent in 2008 and 2009. That said, the relatively low current rate and the gradual nature of the easing indicate that the rental housing demand has remained strong. The average rent for two-bedroom apartments rose by 1.8 per cent between the October 2011 and October 2012 surveys. As was the case for the Montréal area, the average rent in the Québec CMA reached around $700.

The Quebec part of the Ottawa-Gatineau CMA registered an increase its vacancy rate. In fact, the proportion of unoccupied units was estimated at 3.3 per cent in October 2012, compared to 2.2 per cent at the same time the year before. Rental housing demand was likely reduced by the declining job market for young people. On the supply side, condominium completions in the Gatineau area have increased, so condominiums are providing increasingly strong competition for the rental market in the area. The average rent for two-bedroom apartments has now reached $721. The estimated change in the average apartment rent was 1.7 per cent between the October 2011 and October 2012 surveys.

Estimated at 5.0 per cent, the rental apartment vacancy rate remained relatively stable in the Sherbrooke CMA. This stability came on the heels of a period of easing from 2003 (vacancy rate of 0.7 per cent) to 2010 (4.6 per cent), during which the movement to homeownership was sustained. The concurrent decreases in demand and supply were such that the vacancy rate did not show any significant change this year over last year. According to the results of the October 2012 survey, the average rent in the CMA reached $565. The estimated change in the average apartment rent was 0.5 per cent between the October 2011 and October 2012 surveys.

After remaining stable in 2011, the rental market in the Trois-Rivières CMA eased this year. According to the results of the October 2012 survey, the proportion of unoccupied units increased from 3.9 per cent in the fall of 2011 to 5.2 per cent in October of this year. This easing of the rental market was largely due to a more abundant supply of new units and a relatively stable demand in 2012. Rental market conditions in the CMA have been softening since 2009. This trend on the rental market had an impact on the estimated change in the average rent, which was measured at -1.1 per cent this year. The average rent for two-bedroom apartments was estimated at $526, and the levels varied significantly depending on the sectors.
The vacancy rate on the Saguenay area rental market was estimated at 2.0 per cent in October 2012, compared to 1.4 per cent a year earlier. While the youth job market and migration supported rental housing demand in the area, the increase in supply caused the market to ease slightly. The average rent was estimated at $527.

Outlook

Rental housing is, and remains, an important reality in the housing context in Quebec—important because of the size of the rental housing stock and because of the fact that the vacancy rates remain relatively low in a number of centres. The greater affordability and property management benefits of rental housing are assets in the current context of financial constraints and of retirement of the first baby boomers.

But even with a sustained demand, it has to be acknowledged that, apart from retirement homes, few new rental structures have been built. It can therefore be expected that the market will remain tight in the short term. In the medium term, it will be important to track the residential path of the new cohort of seniors. Will they age in place? Will condominiums have adapted to the realities of people in their seventies? Will the new cohort of seniors follow the same path as the previous cohort? Or, finally, will they have moved earlier to mid- or upper-range traditional rental housing? The answers to these questions will have an undeniable impact on the direction that the rental market will take over the coming years.

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: $500 in the previous year vs. $550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.
The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market** (SRMS) in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

• Rented single-detached houses.
• Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
• Rented freehold row/town homes.
• Rented duplex apartments (i.e.. one-above-other).
• Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
• Rented condominiums (can be any dwelling type but are primarily apartments).
• One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

• A Household Rent Survey of all households to collect information about rents.
• A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
• A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented is based on Statistics Canada's 2006 Census area definitions. October 2012 data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
