

# RENTAL MARKET REPORT

## British Columbia Highlights\*

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2012

Figure 1

Figure 2

\*Only centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAAs.

<sup>1</sup> Due to seasonal factors, the results of the October 2012 Rental Market Survey are not directly comparable with the results from the April 2012 Rental Market Survey.

## Highlights

- The British Columbia average vacancy rate was 2.7 per cent in October 2012, up from 2.4 per cent a year ago.<sup>1</sup>
- Although the apartment vacancy rate in the Vancouver Census Metropolitan Area (CMA) was up compared to a year ago, it remained one of the lowest vacancy rates of the 26 centres surveyed in British Columbia.
- The estimated increase in same sample two-bedroom apartment rents was 2.0 per cent compared to 2.2 per cent a year ago.
- The availability rate, a broader measure of rental supply which takes into account rental units that are either vacant or for which notice has been given, was 3.6 per cent in October 2012, higher than the 2011 level.

## Rental Vacancy Rate Edged Up

Rental market conditions eased in most urban British Columbia centres<sup>2</sup> surveyed in October 2012. The apartment vacancy rate in the province was 2.7 per cent, compared to 2.4 per cent a year ago.

Apartment vacancy rates were higher across all bedroom types except bachelor apartments, with larger apartment units reporting higher vacancy rates than smaller units. The vacancy rates for two-bedroom and three-bedroom or larger apartments of 3.5 per cent and 4.2 per cent, respectively, were up from 3.0 per cent and 2.8 per cent one year earlier. The movement of households from larger rental units to homeownership was likely one of the factors contributing to this trend. Demand for smaller rental units remained strong. The vacancy rate for bachelor apartments was statistically unchanged from the October 2011 level at 1.5 per cent.

Although the rental vacancy rates were up in most centres surveyed, the Abbotsford-Mission CMA recorded lower vacancy rates for bachelor, one and two bedroom apartments in October 2012. The CMA's average vacancy rate was 4.2 per cent, down from 6.7 per cent one year earlier. The lower apartment vacancy rate may be attributed to the increasing housing demand in the CMA fuelled by job gains and migration flows. Full-time employment growth has contributed to the increase in

employment levels in the CMA. Between October 2011 and October 2012, the household formation rate in Abbotsford-Mission outpaced the provincial level.<sup>3</sup>

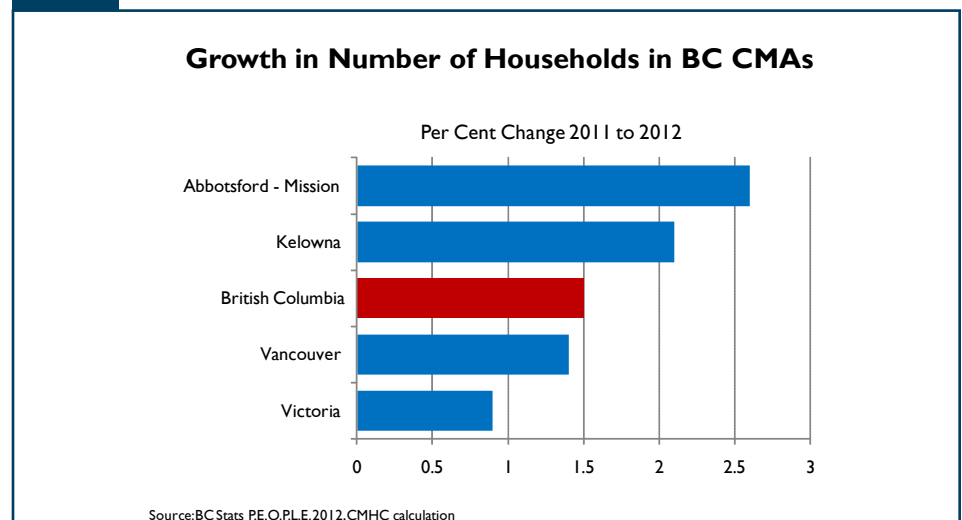

At 1.8 per cent, the apartment vacancy rate in the Vancouver CMA increased slightly from 1.4 per cent last fall but remained one of the lowest vacancy rates among the 26 centres surveyed in the province. Demand for rental housing was supported as people moving to Vancouver from other countries added 28,966 permanent residents in 2011,<sup>4</sup> and immigrants tend to rent before transition into homeownership. Tepid employment conditions for the 15 to 44 age cohort in the Vancouver CMA also contributed to the upward movement of vacancy rates. In October 2012, total employment in the Vancouver CMA for the 15 to 44 age cohort slipped one per cent year-over-year, which could have imparted some moderation on an otherwise healthy rental demand.

In British Columbia's other large rental markets, the apartment vacancy rate in the Kelowna CMA was 4.0 per cent in October 2012, up from 3.0 per cent a year earlier. In the Victoria CMA, the apartment vacancy rate was 2.7 per cent, 0.6 per cent higher than the level last year.

## Rental Housing Supply Relatively Unchanged

In the October 2012 Rental Market Survey, the number of purpose-built rental apartments remained relatively unchanged at 165,308 apartments. Gains in some centres offset declines in others. The return to the market of rental units, which had been temporarily taken off the market while they underwent renovations, may have added to the rental universe and contributed to higher vacancy rates in some centres. As well, a combination of low mortgage interest rates and declining home prices can draw people from rental to homeownership, freeing up rental housing. The

Figure 3

<sup>2</sup> An urban centre is a centre with a population of 10,000 or more people.

<sup>3</sup> BCStats P.E.O.P.L.E. 2012 Projections for Households as of October 2012, CMHC calculation.

<sup>4</sup> Citizenship and Immigration Canada, Facts and Figures 2011

largest addition to supply was in the Vancouver CMA, where the number of private apartments in the survey universe increased by 386 units, two-thirds of which were in two-bedroom units. Increases in rental supply were also recorded in Kelowna and Victoria CMAs.

## Average Rents Increased Moderately

The pace of rent increase in two-bedroom purpose-built apartments between October 2011 and October 2012 was moderate at 2.0 per cent, similar to the rate recorded a year ago, and higher than the 0.5 per cent general rate of consumer price inflation in British Columbia. For one-bedroom apartments, the estimated annual increase in rent was 1.9 per cent for structures common to both the October 2011 survey and the October 2012 survey.

The average rent for a two-bedroom apartment in new and existing structures was \$1,073 per month. The average rent was higher in the Vancouver CMA at \$1,261 for a two-bedroom apartment, and \$982 for a one-bedroom apartment. One-bedroom apartments make up almost two-thirds of the purpose-built stock in the Vancouver CMA.

## Availability Rate Moved Higher

The availability rate<sup>5</sup> in British Columbia moved higher to 3.6 per cent in October 2012 compared to 3.3 per cent in October 2011.

Figure 4

This trend held across all bedroom types, with three-bedroom or larger apartments reporting the highest availability rate at 4.9 per cent. The monthly turnover rates<sup>6</sup> were higher for bachelor and one-bedroom apartment units in this survey period, and lower for two-bedroom and three-bedroom or larger units.

## Secondary Rental Market

Investor-owned apartments are an important addition to rental market supply in British Columbia and complement the existing stock of rental accommodation. CMHC's October 2012 Rental Market Survey includes a Condominium Apartment Rent Survey and a Condominium Apartment Vacancy Survey. These two Surveys are conducted in the Vancouver and Victoria CMAs, and the results can be found in Table 4.1.1 to Table 4.3.1. In both CMAs, the rental condominium vacancy rate moved

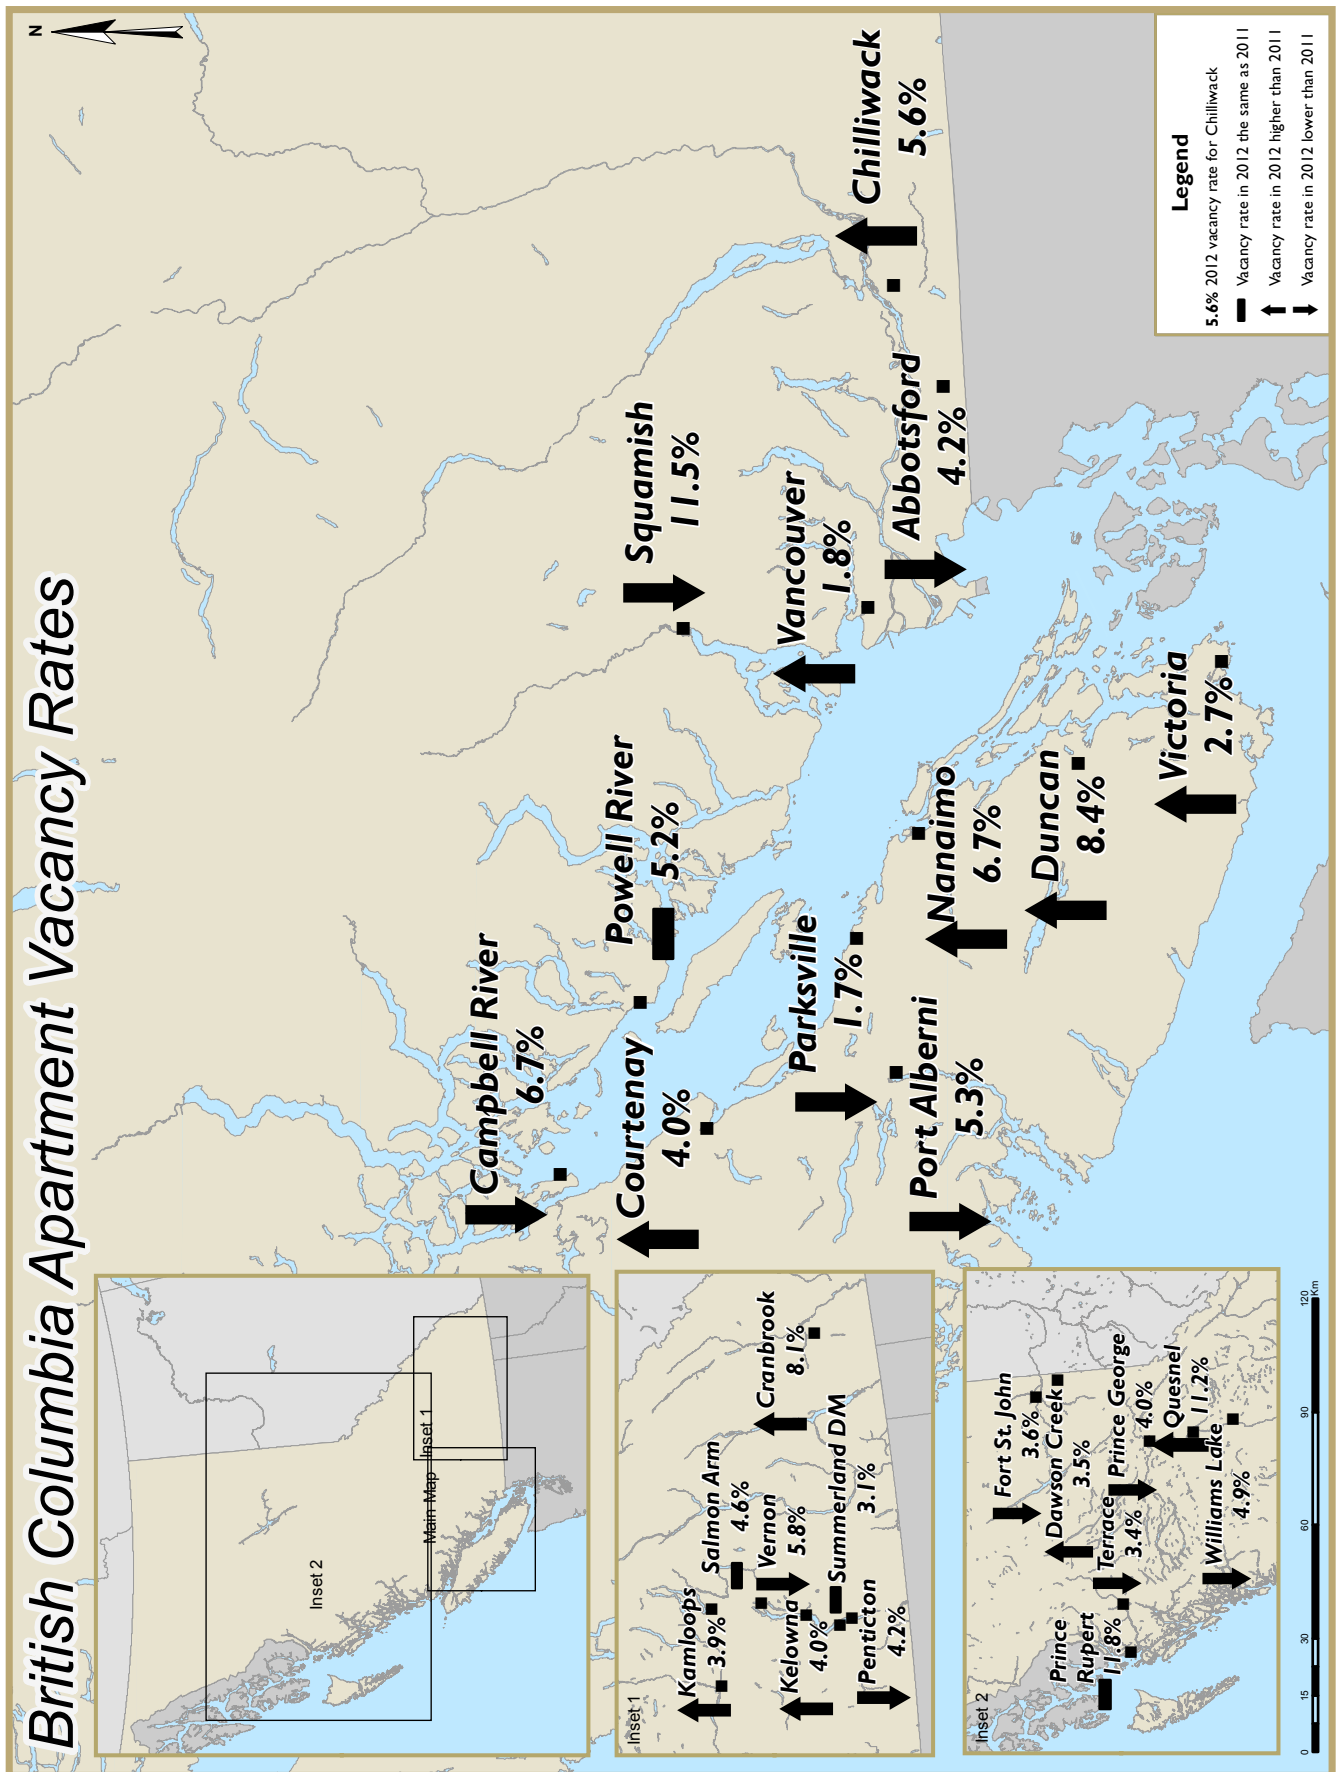

higher in tandem with the purpose-built apartment vacancy rate. The secondary rental market recorded lower vacancy rates and higher rents compared to the purpose-built rental market.

In addition to the condominium market, CMHC's October 2012 Rental Market Survey also includes information on the secondary rental market<sup>7</sup>. Vancouver, Victoria, Kelowna and Abbotsford were the centres included in this survey. The results can be found in Tables 5.1 and Table 5.2.

<sup>5</sup> A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant.

<sup>6</sup> The turnover rate is calculated as the availability rate less the vacancy rate divided by the availability rate.

<sup>7</sup> For example, rented single-detached, semi-detached, duplex, row and accessory apartments are included in this survey.

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2011 data presented is based on Statistics Canada's 2006 Census area definitions. October 2012 data presented is based on Statistics Canada's 2011 Census area definitions.

### Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

### Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
