BC Region

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2012

New Home Market

Builders began construction on 5,855 homes during the first quarter of 2012 in urban centres¹ in British Columbia, representing a 14 per cent increase over the same period last year. About four-fifths of these starts were in the Vancouver Census Metropolitan Area (CMA), an increase from about three-quarters in the first quarter of 2011, reflecting better resale market

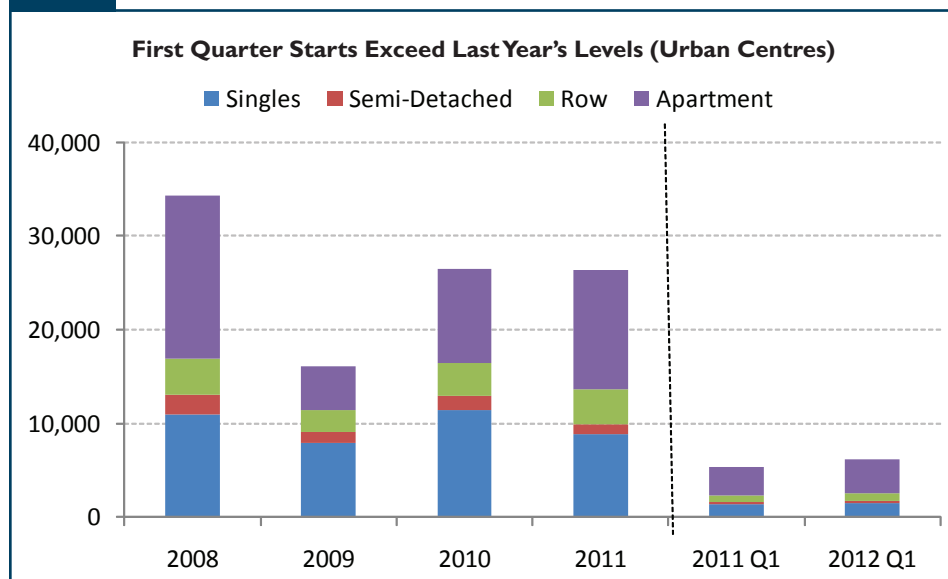

conditions and a stronger labour market in this part of the province. Other CMA's in the province, such as Victoria and Abbotsford-Mission, recorded fewer housing starts in the first quarter compared to year-ago levels. In centres with populations below 10,000, starts were up five per cent.

Builders are shifting to more multiple home construction. In the first

quarter of 2012, multiple-family starts represented over three-quarters of total housing starts. Home construction in Vancouver is behind this trend. The increase in housing starts in the Vancouver CMA was driven by condominium apartment starts which were up 47 per cent from the first quarter of 2011. Single-family homes in Vancouver recorded a modest increase of 12 per cent. One factor behind the shift to more multiple home construction is that builders are focusing on meeting the demand for more moderately priced homes in the Vancouver CMA. Within the CMA, the municipalities with the largest increase in apartment condominium starts as compared to the first quarter of 2011 were the Cities of Vancouver, Burnaby, New Westminster and Port Moody.

Rental apartment starts in British Columbia decreased from 628 units in the first quarter of 2011 to 332 units in the first quarter of 2012. The Vancouver CMA led the decline in rental apartment starts with a decrease to 142 units in the first

quarter of 2011 from 365 units in the first quarter of 2011. There were also fewer rental apartment starts in the Cities of Victoria, Prince George and Kelowna while Nanaimo partially offset the overall reduction in British Columbia for the quarter by starting 112 more units than in the same quarter last year.

The average new home price in the province increased 14 per cent compared to the first quarter of 2011. This higher home price was partly attributed to an increase in the share of new homes in large centres, such as Vancouver, which tend to have higher land costs. New home prices in Kamloops, Nanaimo and Prince George were stable compared to prices in the first quarter of 2011. Chilliwack, Vernon, Abbotsford-Mission and Kelowna saw average price changes which were largely driven by a change in the types of homes that were constructed. Chilliwack and Abbotsford-Mission had a larger number of lower-priced homes constructed in the first quarter of 2012 compared to 2011, pushing the

average price down for those areas, whereas the opposite scenario played out in Vernon and Kelowna.

New home completions were up 46 per cent from a year ago to 4,093 units, largely driven by the Vancouver CMA where completions were 75 per cent higher than a year ago. Multiple-family home construction can take up to 24 months to complete and the increases in starts that occurred in 2010 and 2011 are now being reflected in increased completion numbers.

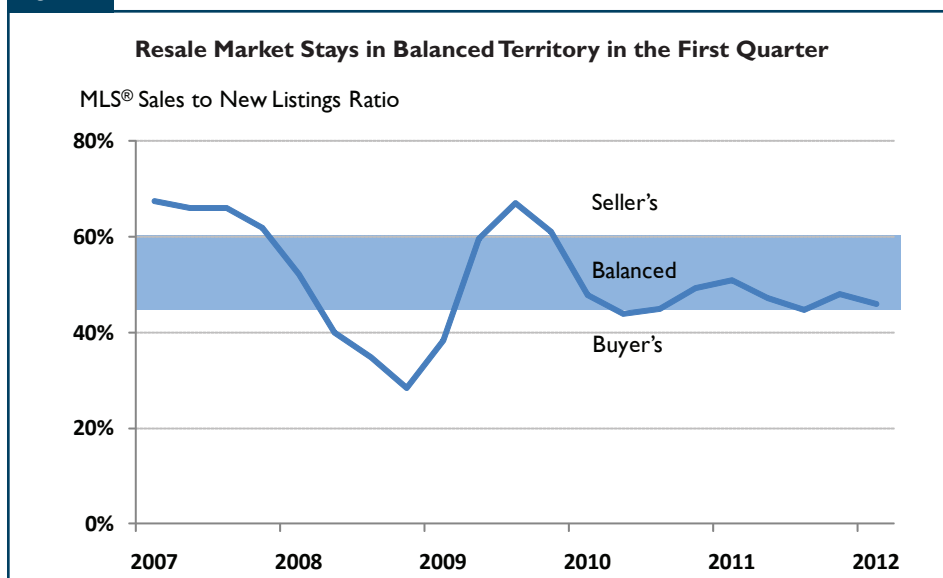

Resale Market

Residential home sales in British Columbia were lower in the first quarter of 2012 compared to the same quarter of 2011, with 16,724 units sold compared to 19,147 units previously, a 12.7 per cent decline. Since the second quarter of 2011, sales have been stable with quarterly changes of less than 400 units on a seasonally-adjusted basis.

Provincial resale market conditions have also remained stable, holding at the low end of balanced conditions, according to the MLS^{®2} sales-to-new listings ratio. This ratio has remained between 45 per cent and 48 per cent on a monthly basis over this period. A sales-to-new listings ratio of 45 to 60 per cent indicates balanced market conditions. While both sales and new listings have decreased on a seasonally-adjusted basis since the first quarter of 2011, the reduction in sales has been larger than the reduction in listings resulting in this ratio reducing from 50.5 per cent in the first quarter in 2011 to 46 per cent in the first quarter of 2012.

² MLS[®] is a registered trademark of the Canadian Real Estate Association (CREA).

Figure 2

Source: Canadian Real Estate Association (CREA), CMHC Calculation

Although the provincial resale market was in balanced supply and demand conditions during the first quarter of 2012, the price in the first quarter of 2012 was down five per cent as compared to the first quarter of 2011. The first quarter 2011 provincial average home price was boosted by strong demand for higher priced homes in some sub-markets in Vancouver. The seasonally-adjusted average price in British Columbia was \$522,663 in March 2012, down two per cent compared to the price in December 2011.

Sales volumes and prices were below previous year levels in most regions of the province in the first quarter of 2012. This included Vancouver (Real Estate Board of Greater Vancouver) with volumes 23 per cent below last year's level and prices for all home types down one per cent, the Fraser Valley (Fraser Valley Real Estate Board), where volumes were 13 per cent below last year's level and average price down four per cent, Kelowna with volumes down five per cent and prices down seven per cent and Victoria where volumes were four per cent below previous year levels and prices down four per cent. Prince George was a notable exception to this trend with year-to-date volumes increasing by 15 per cent. Prices in the first quarter in Prince George did not follow volumes, however, and were down by one per cent.

Economic Trends

Overall, economic indicators were favourable for the housing market in the first quarter of 2012. Employment levels increased, migration remained strong, there was an increase in full-time employment and residential permit activity started the year on a positive note.

Figure 3

Source: Statistics Canada Labour Force Survey. All figures seasonally adjusted

Labour market conditions were supportive of housing demand in the first quarter. Employment, although flat on a seasonally-adjusted basis from last month, was up over March, 2011 by 38,700 jobs and exceeded the growth of the labour force. This succeeded in pushing the unemployment rate for the province down to 7.1 per cent from 8.2 per cent in March of last year. The unemployment rate for those 25 and over, which is the bulk of the home buying market, was 5.8 per cent in March, down from 6.8 per cent in March, 2011 and is now very near the ten year average of 5.6 per cent.

The lowest unemployment rate in the province for the eleventh straight month was the Northeast region of the province, where it is currently at 3.6 per cent, using the three month moving average. Other areas of the province with unemployment rates below the overall provincial rate, also using the three month moving average, were Nanaimo, at 5.3 per cent, Victoria, at 5.5 per cent, the Kootenays, at 6.5 per cent

and Vancouver at 6.6 per cent. Abbotsford-Mission, Kelowna, Kamloops, Vernon and the North Coast and Nechako were the areas of the province with the highest rates of unemployment in March, with rates ranging from 9.4 per cent (Kelowna) to 15.4 per cent (Vernon).

There continue to be gains in full-time employment at the expense of part-time jobs, which is pushing average weekly earnings higher. Part-time employment in British Columbia as a percentage of total employment dropped by one per cent from the same month last year and edged closer to the ten year average of 21.5 per cent. In March 2012, it was at 22.1 per cent on a seasonally-adjusted basis. Migration continued to buoy the housing market with 35,882 net new international migrants in 2011, similar to the 2010 level.

Residential building permit activity is an indicator of future residential construction. In the first two months of 2012, the total dollar value (on a seasonally-adjusted basis) of

residential permits issued was over \$989 million, a nine per cent increase over the same period last year. Over the past twelve months from April 2011 to March 2012, however, the dollar value of issued residential permits was down slightly to \$6.34 billion from the previous 12 month total of \$6.69 billion.

Interest Rates

With inflation within the Bank of Canada’s target range and the overnight rate held steady and low, mortgage interest rates have remained stable and low. The Bank of Canada uses the overnight rate to influence interest-rate sensitive spending in order to keep consumer price inflation on target. The last time the overnight rate was changed was September 8th, 2010 and since that time both one-year and five-year mortgage rates have stayed within a fairly narrow range. One-year posted rates rose from 3.3 per cent in September 2010 to 3.7 per cent in May 2011 and they have since been trending downward to 3.2 per cent in March 2012. The five-year posted mortgage rate has remained between 5.19 per cent and 5.44 per cent for all but two months since September 2010. The five-year posted mortgage rate was at 5.24 per cent as of March 2012.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! This permission consists of the right to use the content for general reference purposes in written analyses and in the reporting of results, conclusions, and forecasts including the citation of limited amounts of supporting data extracted from this publication. Reasonable and limited rights of use are also permitted in commercial publications subject to the above criteria, and CMHC's right to request that such use be discontinued for any reason.

Any use of the publication's content must include the source of the information, including statistical data, acknowledged as follows:

Source: CMHC (or "Adapted from CMHC," if appropriate), name of product, year and date of publication issue.

Other than as outlined above, the content of the publication cannot be reproduced or transmitted to any person or, if acquired by an organization, to users outside the organization. Placing the publication, in whole or part, on a website accessible to the public or on any website accessible to persons not directly employed by the organization is not permitted. To use the content of any CMHC Market Analysis publication for any purpose other than the general reference purposes set out above or to request permission to reproduce large portions of, or entire CMHC Market Analysis publications, please contact: the Canadian Housing Information Centre (CHIC) at chic@cmhc.ca; 613-748-2367 or 1-800-668-2642.

For permission, please provide CHIC with the following information:
Publication's name, year and date of issue.

Without limiting the generality of the foregoing, no portion of the content may be translated from English or French into any other language without the prior written permission of Canada Mortgage and Housing Corporation.

The information, analyses and opinions contained in this publication are based on various sources believed to be reliable, but their accuracy cannot be guaranteed. The information, analyses and opinions shall not be taken as representations for which Canada Mortgage and Housing Corporation or any of its employees shall incur responsibility.
