HOUSING MARKET INFORMATION

HOUSING NOW St. John's CMA

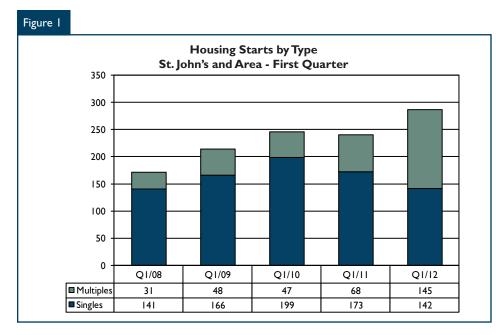

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2012

Positive First Quarter for Housing Market

Continued employment growth and a low interest rate environment in the quarter contributed to a marginal improvement in housing activity during the first quarter of 2012. New home construction and MLS® residential sales activity both increased compared to the first

quarter of 2011. In terms of average house prices, growth continued in both the new and existing home markets. Overall, a strong local economy continued to support the St. John's area housing market during the first three months of 2012.

Increased New Home Construction Activity

New home construction activity increased over last year throughout the St. John's area during the first quarter and average prices advanced. Total housing starts were 287 versus 241 in 2011's first quarter. There were only 142 single-detached starts, however, compared to 173 last year. This decline was offset by a sizeable increase in multiple starts, with 145 recorded during the first quarter compared to 68 a year ago. The multiple starts segment was led by 71 apartment condo starts and 64 apartment (basement) starts. The remaining multiples were comprised of semi-detached and row structures.

Starts activity at the submarket level was mixed. St. John's City had 164 starts versus 91 in 2011's first quarter. Starts in Paradise increased 40 per cent, with 67 units versus 48 a year ago. Mt. Pearl had ten housing starts compared to 20 during 2011's first quarter; Conception Bay South (CBS) recorded 29 starts compared to 43 a year ago, for a decrease of 33 per cent; while housing starts in Torbay were down 77 per cent with three recorded compared to 13 during 2011's first quarter. Total starts in the remainder of the CMA decreased to 14 units compared to 26 a year ago.

The average new, single-detached house price increased in four of the six submarkets during the first quarter. The overall average new house price for the St. John's CMA was \$354,438, an increase of 3.6 per cent compared to \$342,113 recorded during the first quarter of 2011. Led by larger custom built homes, the average sale price was highest in Torbay at \$425,751, up nine per cent. CBS posted an average new house price of \$321,391 during the quarter, up 13 per cent; Paradise saw

Source: CREA, CMHC

MLS® is a registered trademark of the Canadian Real Estate Association (CREA)

a seven per cent decline to \$338,745; Mount Pearl increased I3 per cent, with an average price of \$304,574; St. John's City posted an eight per cent increase to \$374,473; while the remainder of the CMA decreased I.6 per cent to \$347,836.

Throughout the entire St. John's CMA, approximately 70 per cent of all new single-detached homes sold for more than \$300,000 in the first quarter. The fastest growing segment of the market was in the \$400,000 plus segment, which increased to 27 per cent of total new home sales from 20 per cent share a year ago.

MLS® Residential Market

There was a broader range of homes to choose from, with inventory up seven per cent in the first three months of the year. Listings remained on the market for an average of 73 days and average prices continued to show gains, with offers at approximately 98 per cent of asking price. For the St. John's area, there were 1,664 new residential listings

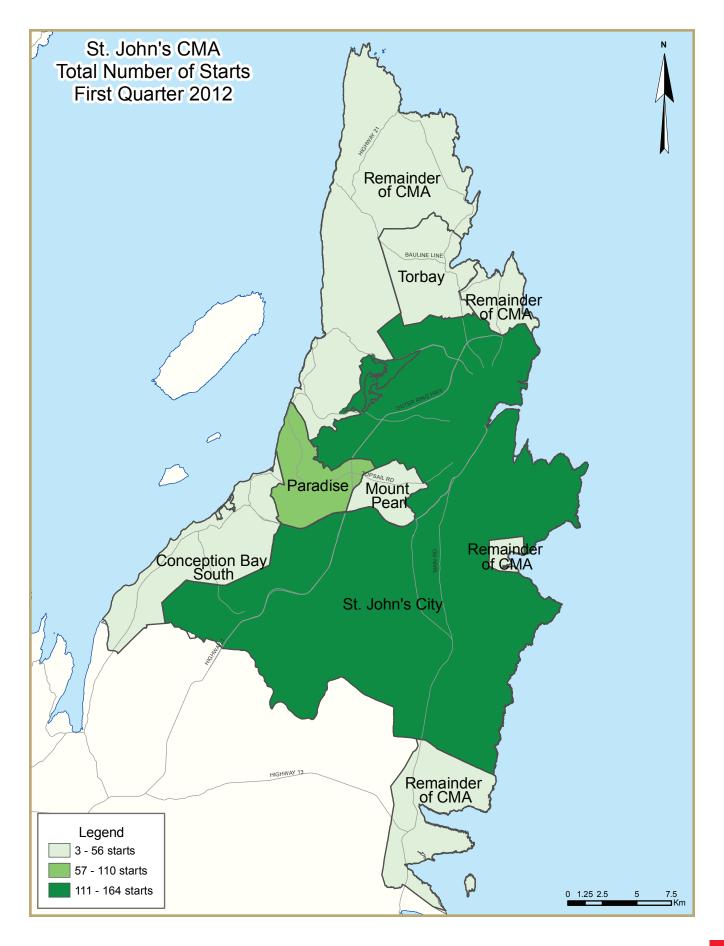

compared to 1,518 during the same period last year. Active listings averaged 1,622 this year versus 1,516 during the first quarter of 2011. The sales-to-active listings ratio indicated that 13 per cent of listings sold during the quarter compared to a similar 13.4 per cent during the same time last year.

MLS® Sales and Prices Increased

There was growth in both MLS® residential sales and prices during the first quarter. The number of MLS® sales increased 3.4 cent to 635 sales compared to 2011's first quarter total of 614 units. The average MLS® residential price in the St. John's CMA was 7.4 per cent higher than it was a year ago, at a record \$277,698 compared to \$258,668 during the first quarter of 2011. The average price continued to be supported by demand driven by local economic and demographic conditions.

At the provincial level, there were 739 MLS® sales posted, the same

number as the first quarter of 2011. The average MLS® residential price in Newfoundland was a record \$263,651 during the January to March period, an increase of 8.4 per cent from a year ago.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
