

HOUSING NOW

Hamilton and Brantford CMAs

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: July 2012

New Home Market

Lower demand for new homes in second quarter

Housing starts rose during the second quarter of 2012 in the Hamilton and the Brantford Census Metropolitan Areas (hereafter referred to as the Hamilton CMA and Brantford CMA). More starts of all home types in the Hamilton CMA and more single-detached starts in the Brantford

CMA boosted total starts by 28 per cent and eight per cent, respectively. Sustained low mortgage rates and a drop in new listings in the resale market in late 2011 led to more buyers looking for a home in the new home market.

The increase in new home construction occurred for nearly every home type in the Hamilton CMA. Single-detached and semi-detached starts combined rose by

14 per cent, while townhouse and apartment starts rose by nearly 50 per cent. Semi-detached, townhouse and apartment starts accounted for just over half of all starts during the quarter. The rising average price of a single-detached home in this market prompted some first time buyers to look for a townhouse or condominium apartment as a lower-priced option. New townhouses were started in Stoney Creek, Glanbrook, Ancaster, and Burlington during the second quarter. In addition, 84 new townhouse and apartment rentals were started in the City of Hamilton, and a new 200-unit condominium building was started in Burlington. Intensification has become more common in recent years as builders adapt to the changing economic environment, as well as adapt to the existing boundaries on new residential construction. In the Brantford CMA, the affordability of single-detached homes as compared to the Hamilton CMA market continues to drive this segment of new home starts. Single-detached starts accounted for three-quarters of total starts last quarter, and increased by one-third over the same period in 2011. The gains in single-detached starts offset the decline in the number of townhouse starts last quarter. There were 26 townhouses started, down from 41 in 2011. Intensification of new residential construction has not been as prevalent in the Brantford CMA, although more townhouses in recent years have offered buyers greater choice in the real estate market.

Figure 2

More homes under construction

The boost in new home starts beginning in the second half of 2011 means construction workers are busy completing the existing inventory. Approximately 2,800 homes were under construction in the Hamilton CMA at the end of June, up 16 per cent from the same time last year. Nearly two-thirds were of semi-detached homes, townhouses and apartments. More construction of higher-density homes have added some variety to the suburban neighbourhoods that typically have consisted of single-detached homes.

Similarly in the Brantford CMA, construction teams were busy completing recent starts. The number of new homes under construction rose by 40 per cent in June, and the number of newly completed homes rose by 80 per cent. The number of completed homes which remained

unsold at the end of June fell 35 per cent from a year ago, indicating strong demand for homes in this market.

The rising price of new, single-detached homes in the Hamilton and Brantford CMAs has encouraged demand to shift towards more higher-density construction. The average price of a new, single-detached home rose in nearly every submarket of both CMAs when comparing the first six months of this year with the same period last year. In many of the typically more expensive markets of Ancaster, Flamborough, and Burlington, a significantly greater proportion of the single-detached homes were sold at or above \$500,000. However, the increase in the share of homes priced at or above \$500,000 was also evident in Grimsby and Brant County. The shift may be an indication of a subset of larger, more expensive homes in these neighbourhoods that have led to higher average prices for the submarket. The gap between

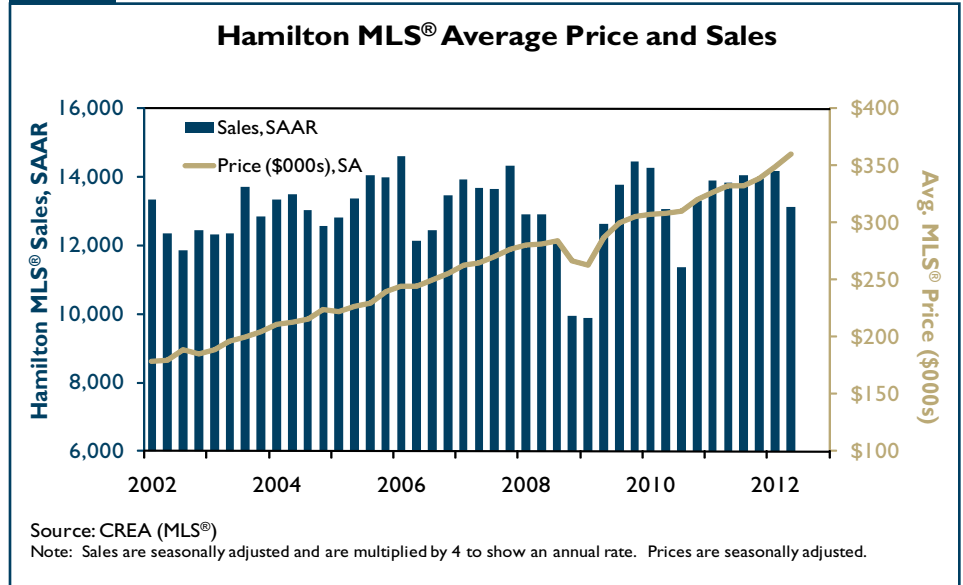

the median and average price also indicates that the average prices were skewed upwards. The average price of a new single-detached home was \$515,000 and \$425,000 in the Hamilton and Brantford CMAs, respectively.

Resale Market

Lower demand for resale homes

Following a strong start to the year, sales of existing homes in both markets fell in the second quarter on a seasonally adjusted basis. They were down five per cent and two per cent in the Hamilton and Brantford CMAs, respectively. In Hamilton, unadjusted sales were also down from a year earlier. Fewer listings of homes for buyers to choose from and a cautious economic environment have translated into a drop in the number of sales. However, the demand for homes remained robust with the majority of homes listed having been sold. The sales-to-new-listings ratio - which measures demand as a ratio of supply - also remained elevated at 68.1 per cent in June in the Hamilton CMA and moved up to 59.6 per cent in the Brantford CMA. With both markets tightening, price growth has accelerated. Also, with prices rising faster than inflation, these ratios indicate a sellers' market in the Hamilton CMA and a balanced market in the Brantford CMAs¹. According to the Real Estate Association of Hamilton-Burlington (RAHB), sales in the Hamilton CMA fell in every

Figure 3

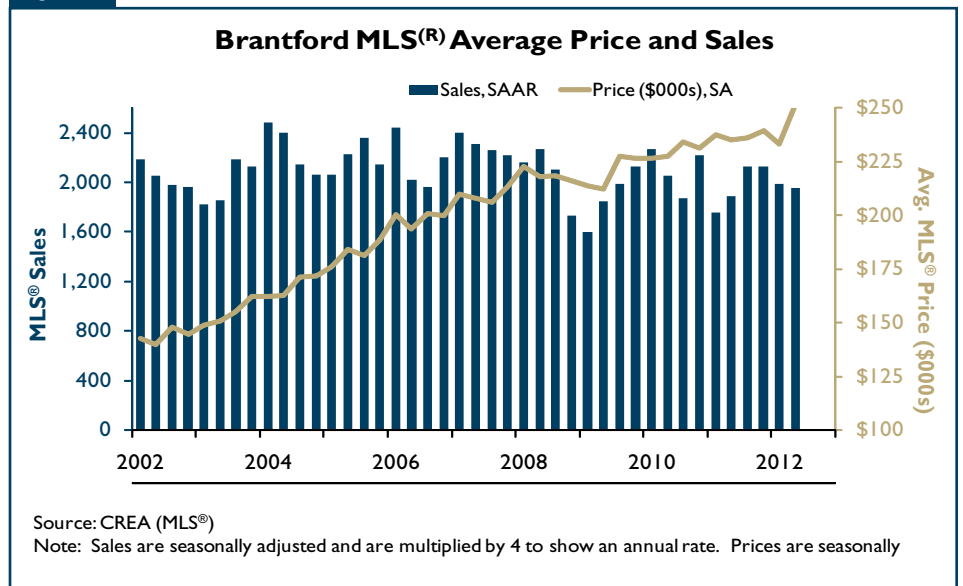

submarket as compared to the second quarter of 2011. On average, sales dropped by 10 per cent in the City of Hamilton, 20 per cent in Burlington, and nine per cent in Grimsby.

Listings drop in the Hamilton

Although new listings in the Hamilton CMA increased slightly from the

first quarter on a seasonally adjusted basis, they fell by more than 15 per cent compared to the same quarter in 2011. The inverse occurred in Brantford, with seasonally adjusted listings down very slightly from the first quarter, but some growth from the previous year. The drop in listings in the Hamilton CMA meant that

Figure 4

¹ A sellers' market implies that price growth is above the rate of inflation.

there were approximately 1,000 fewer listings for buyers to choose from, as compared to a year ago. According to the RAHB, the drop in listings was most evident in the freehold market in the City of Hamilton (-12.4%) and the condominium market in Burlington (-16.2%).

Limited supply drives up prices

In both markets, the limited number of homes available for purchase has resulted in stiffer price competition

amongst buyers. The average price of an existing home in the Hamilton CMA reached \$360,000 on a seasonally adjusted basis in the second quarter, up from \$348,000 in the first quarter of the year. In the Brantford CMA, home prices also rose quickly at a rate of nearly five per cent to reach \$245,000 in the second quarter. According to the RAHB, prices rose in every market of the Hamilton CMA. Comparing single-detached home prices in the three municipalities of the CMA, prices in

Grimsby appreciated the fastest at a rate of growth of 15 per cent over the second quarter of 2011 as compared to the less than two per cent growth year-over-year in Hamilton and Burlington.

Where Are The Listings?

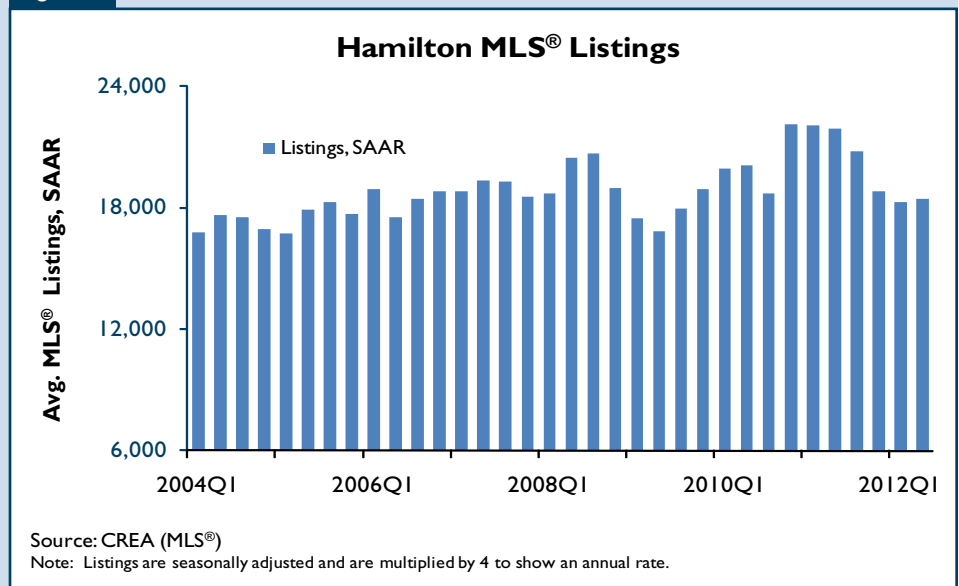

Over the past year, a trend has emerged in the Hamilton CMA where the number of homes listed for sale has been dropping, while the decline in sales is much less pronounced. In fact, in the first quarter of 2012, sales remained elevated despite a drop off in the number of listings. Why is this happening and where are the listings?

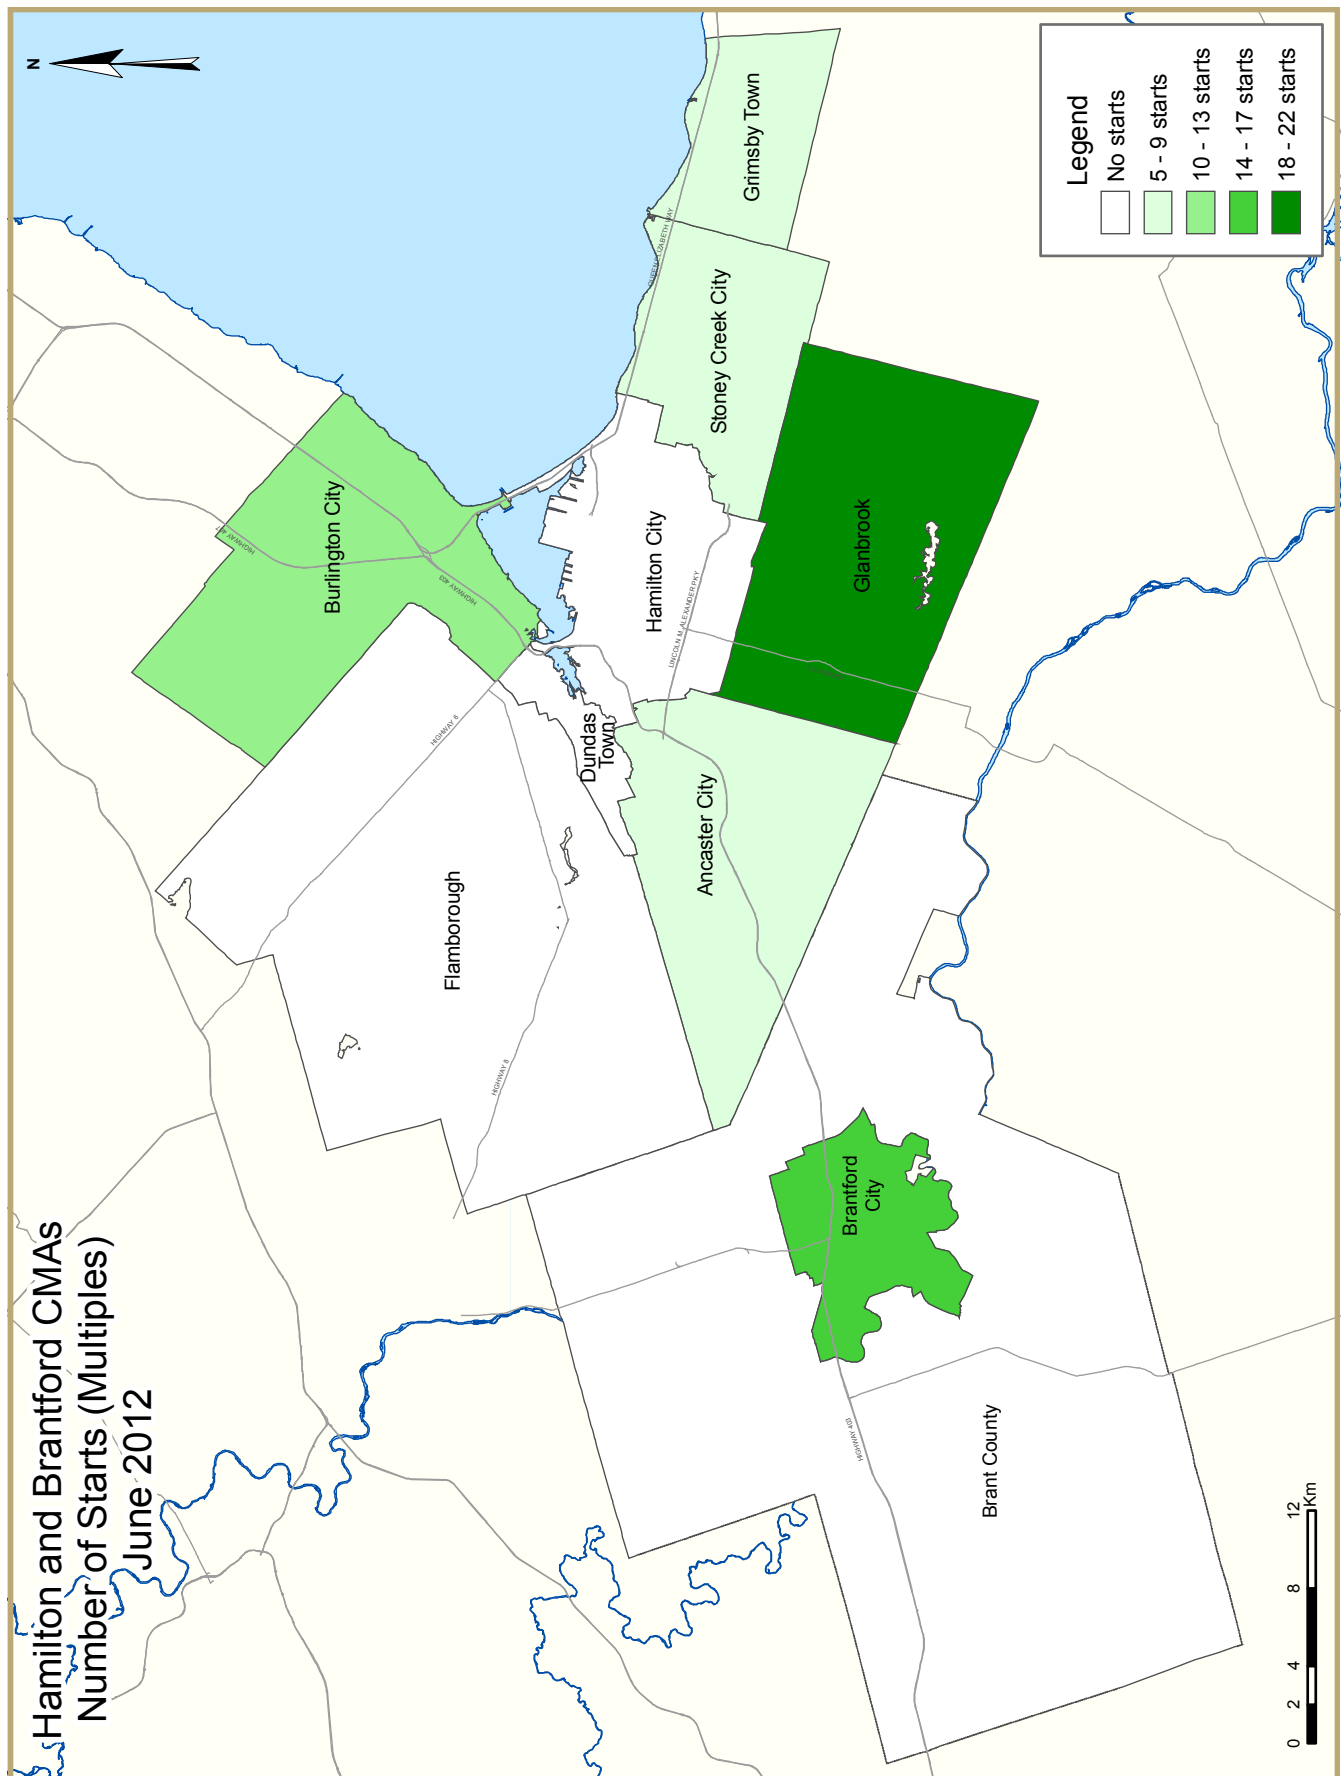

A number of factors may be contributing to this recent trend. Migration statistics from Statistics Canada show that in recent years, the largest group to move into the Hamilton area is from Toronto, followed closely by immigrants. Neither of these groups would contribute to the inventory of listings in the Hamilton CMA, so as they buy, the number of listings declines. Many of them choose to purchase homes in the relatively more affordable segments of Hamilton market.

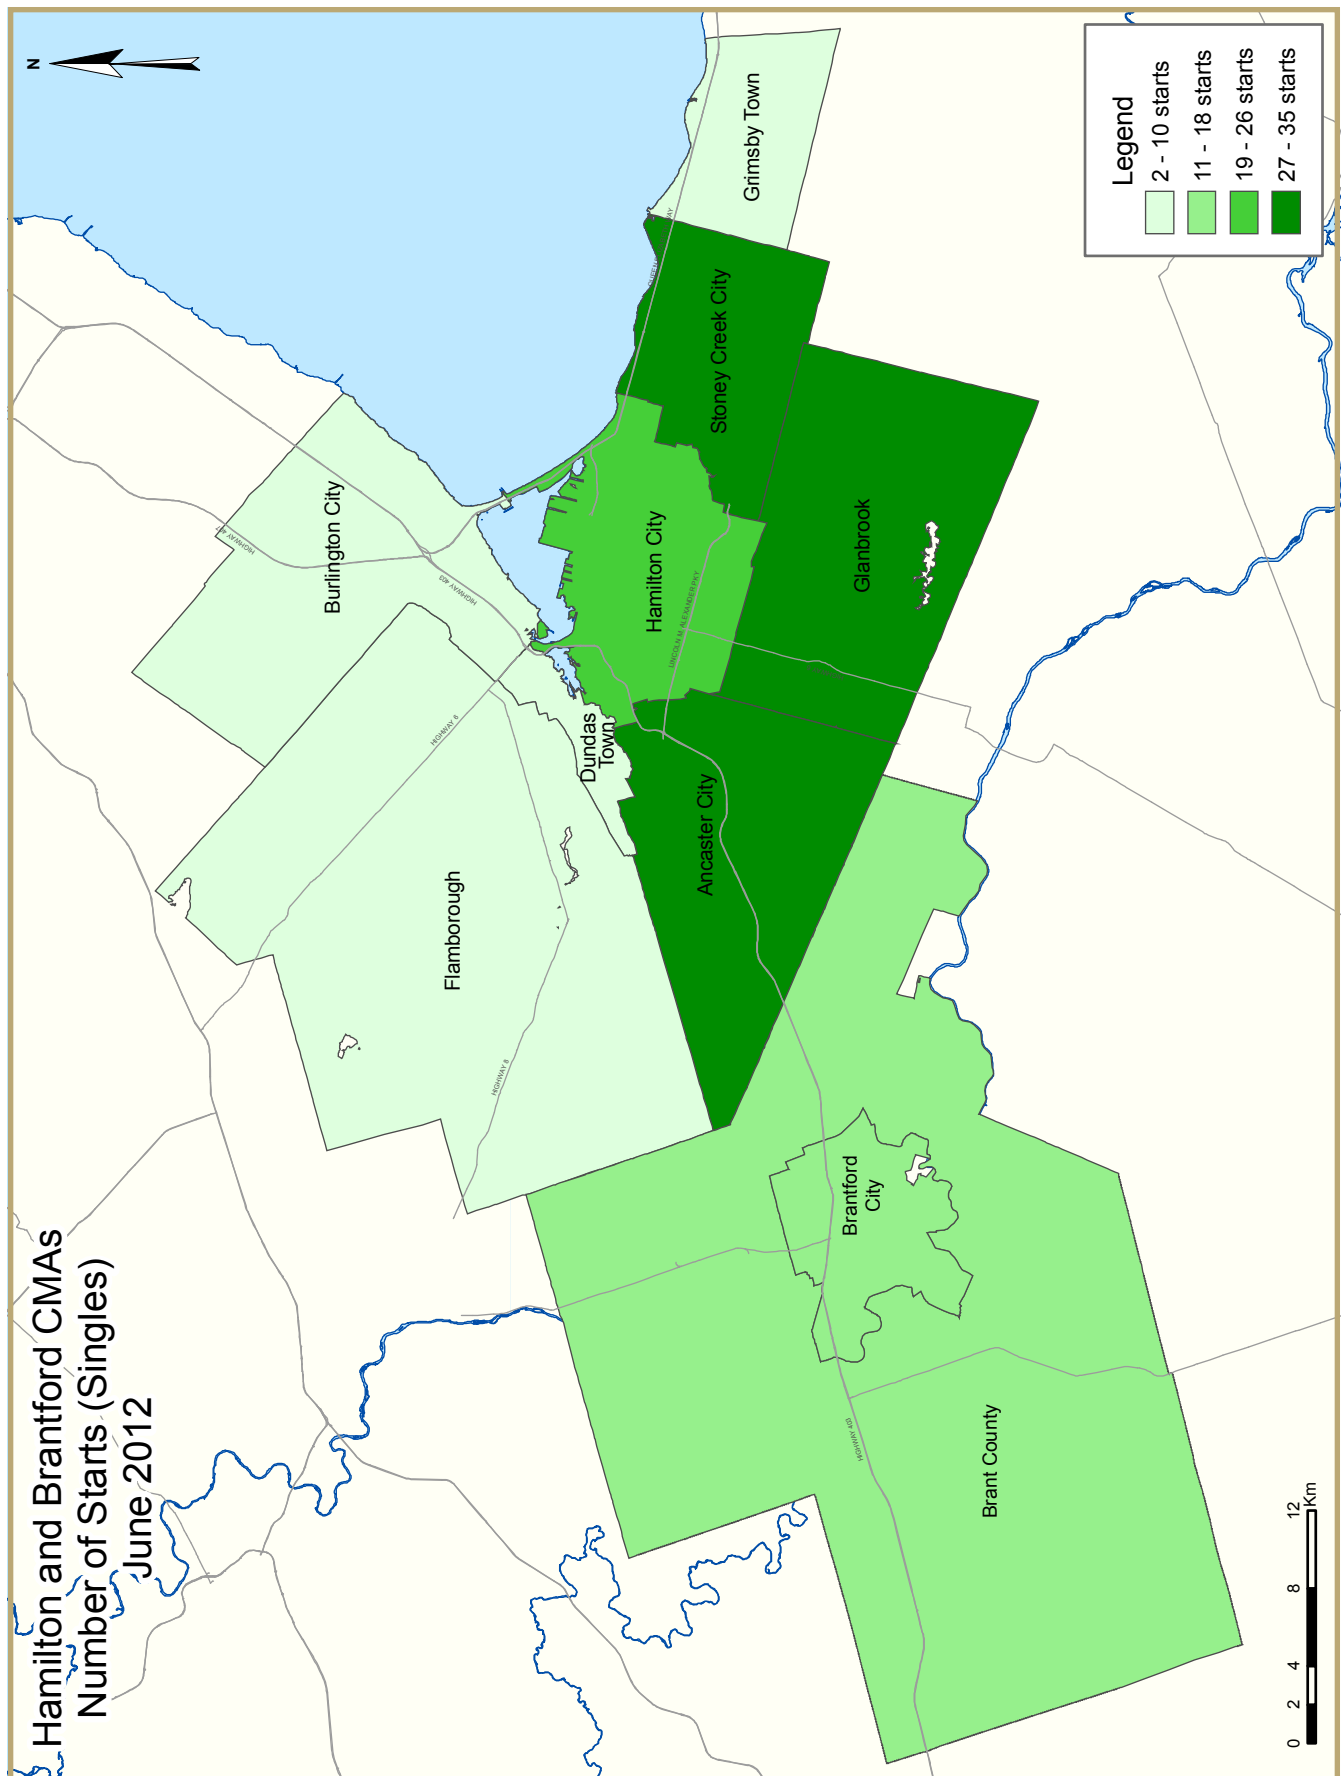

It is not only sales which are taking listings off the market. The drop in condominium listings suggests that fewer first time homeowners

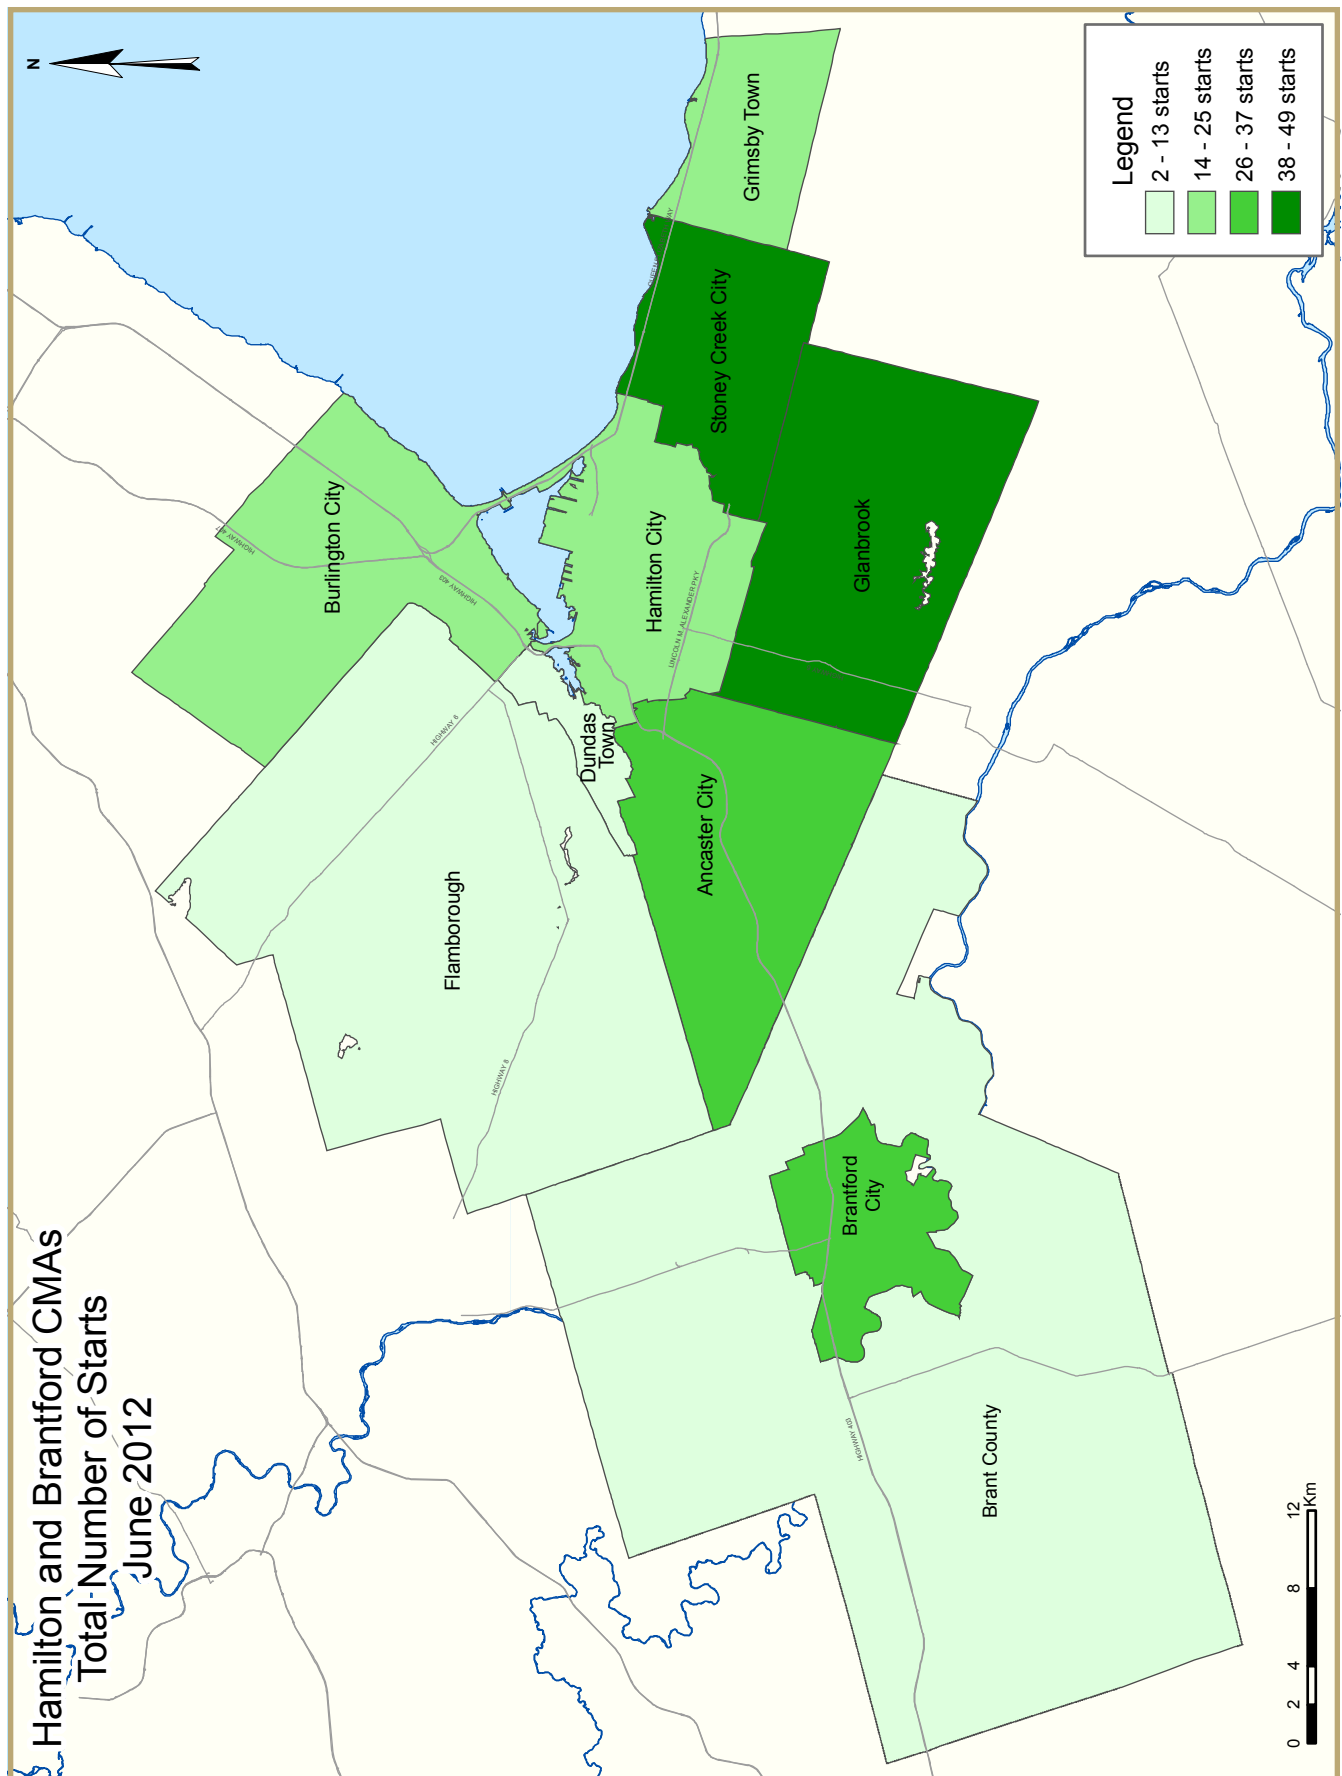

are moving up into a bigger home. High home prices and job market uncertainty are two factors that are increasingly important to consider for today's buyers. They tend to have a greater impact on young people and consequently potential move-up buyers are staying in their condo apartments rather than listing them in order to move up into a more expensive home.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
