

HOUSING NOW

London CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Third Quarter 2012

New Home Market

Strong second quarter starts

Housing starts were nearly double in the second quarter of 2012 in the London Census Metropolitan Area (CMA), compared to the same period one year earlier. However, after adjusting for seasonality it is apparent that residential construction resumed

its upward trend in the second quarter following a brief dip at the beginning of the year.

Increases in all housing types drove up new construction figures but homeownership townhome and apartment construction was significantly higher in the second quarter of 2012. The start of a 287-unit apartment condominium building in Old East in June drove

total starts above trend.

Completions were down significantly due to the lack of apartment buildings coming on the market during the first half of 2012 compared to over 500 units during the same period one year earlier. The strengthening demand for new rental accommodation is evident in the low level of new units available relative to last year and the declining spring apartment vacancy rate.

Stronger housing demand reflected a growing job market. Employment increased by over 7,000 jobs during the second quarter however, the unemployment rate remained level at 8.5 per cent due to a growing labour force. Full-time jobs accounted for the bulk of the growth for the first time in four quarters and provide the income necessary to purchase a new home.

New home prices rise moderately

Both the average and median price for new homes in the London CMA increased in the second quarter. Average prices increased just under two per cent, in line with the New Home Price Index. However the median price rose at a faster pace of 2.5 per cent. Change in the median price reflects change in the overall price level, whereas the slower growth in the average price means that there were fewer homes with unusually high prices. Within the group of homes priced above \$400,000, the sub-group of homes

priced \$400,000-\$449,999 more than doubled in share to 10.7 per cent from 5.3 per cent in the second quarter of 2012. Many of these upper-end homes sold in the City of London. Communities targeting mature buyers in the north end such as Upland Hills; Meadowlands of Sunningdale; and Upper Richmond Village; as well as in the south west end of the City in Talbot Village; The Promenade; and Stonefield, offer homebuyers a variety of choices.

Resale Market

Buyers spring shopping

Once again, sales of existing homes entered the second quarter with momentum but slowed as the quarter ended. On a seasonally adjusted basis sales were on trend albeit less than one per cent lower than the pace set in the first quarter of 2012. The sales-to-new listings ratio was higher during the second quarter reflecting fewer new listings. Many buyers

are moving to London from the surrounding areas and as such do not have an existing home to list in this market resulting in a rising ratio. The market remained balanced as the sales-to-new listings ratio averaged 53.5 per cent seasonally adjusted in the second quarter.

The average resale home price grew by less than two per cent on a seasonally adjusted basis in the second quarter. Sales gains were greatest for homes priced above \$350,000, conversely the number of homes sold priced below \$125,000 declined 27 per cent.

Figure 2

Stronger Demand for Rental Accommodation

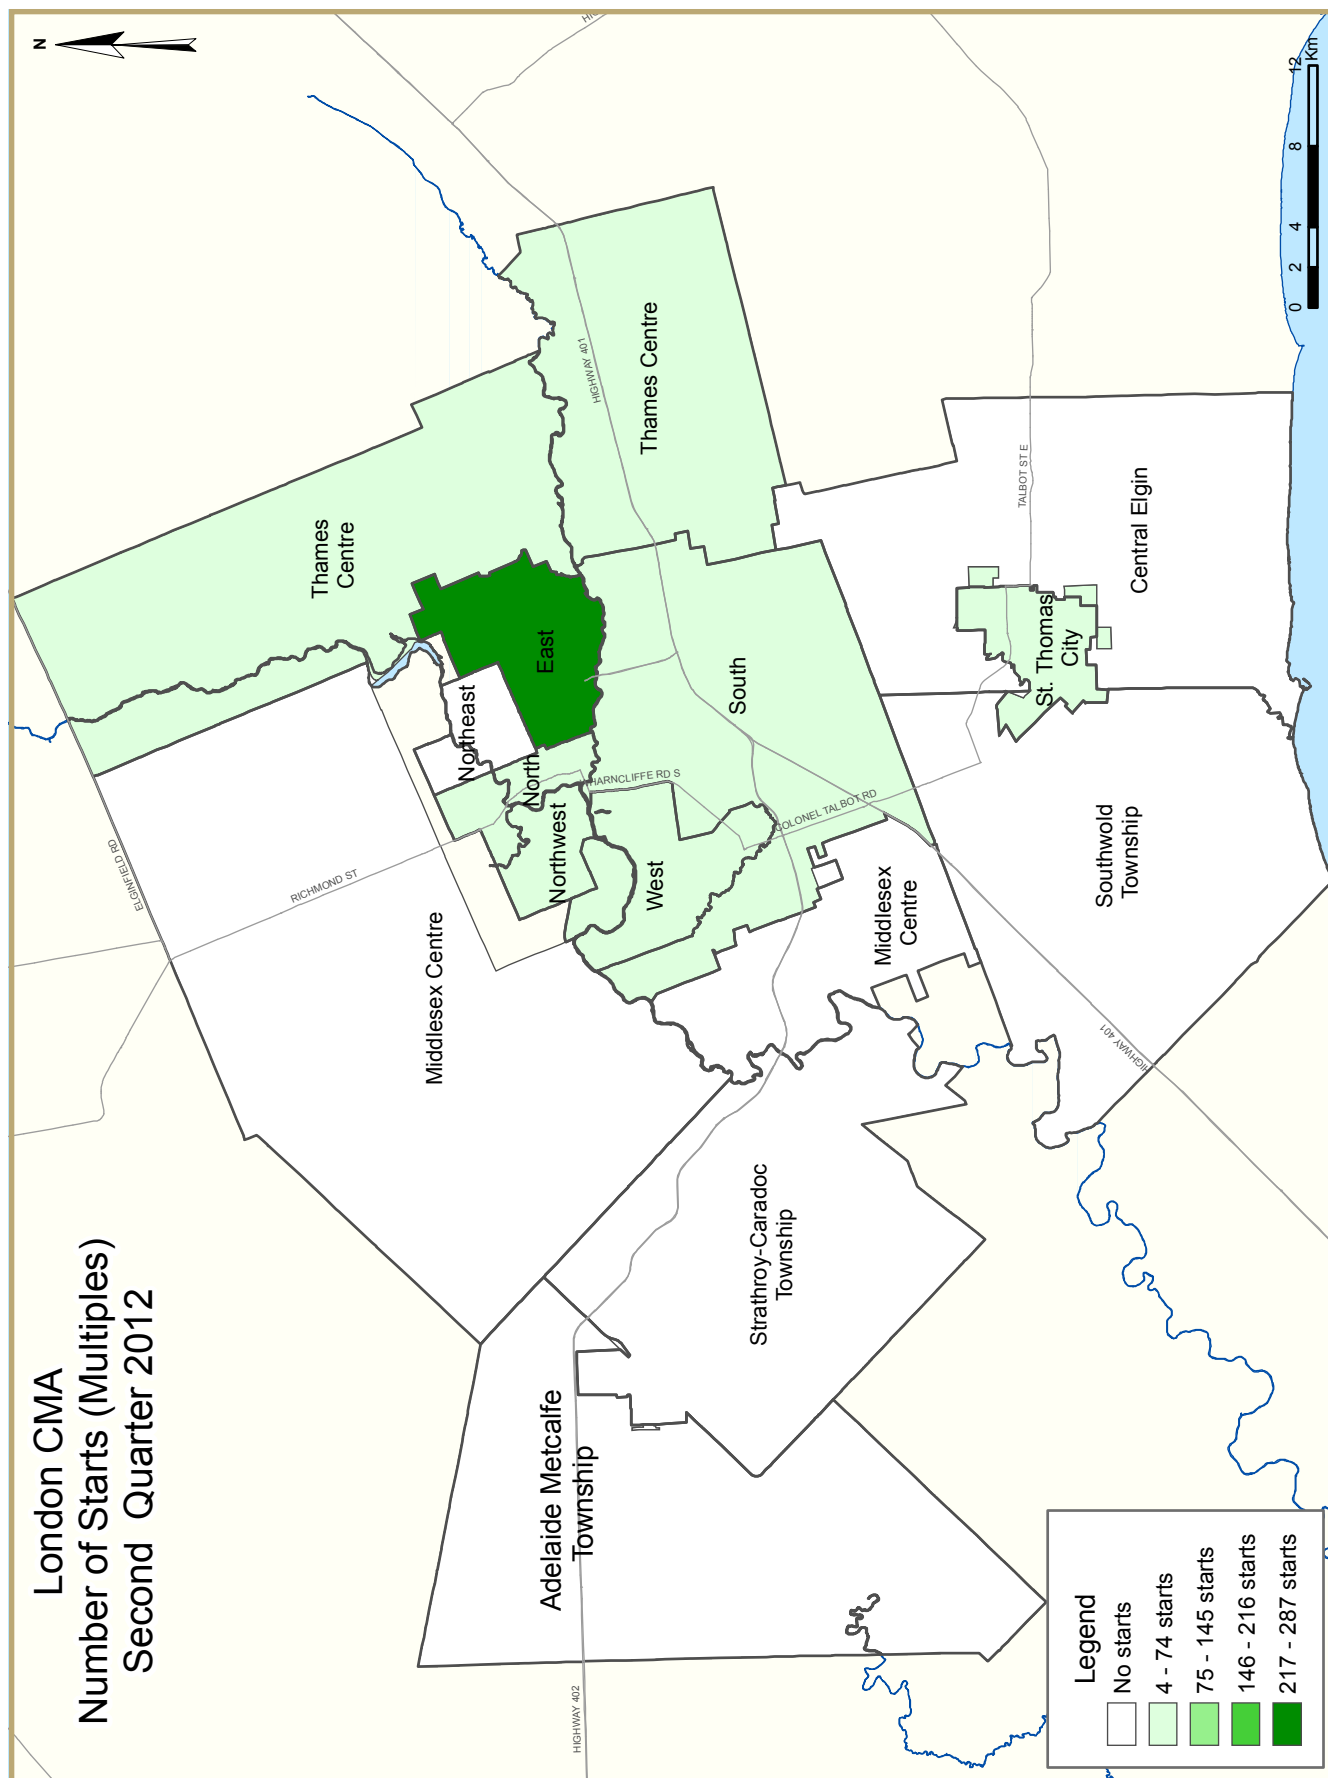

CMHC's recently published Ontario Highlights Rental Market Report showed that the downward trend in London's apartment rental market vacancy rate continued in April 2012. The rate for private apartments declined one percentage point despite the addition of over 500 units to the universe.

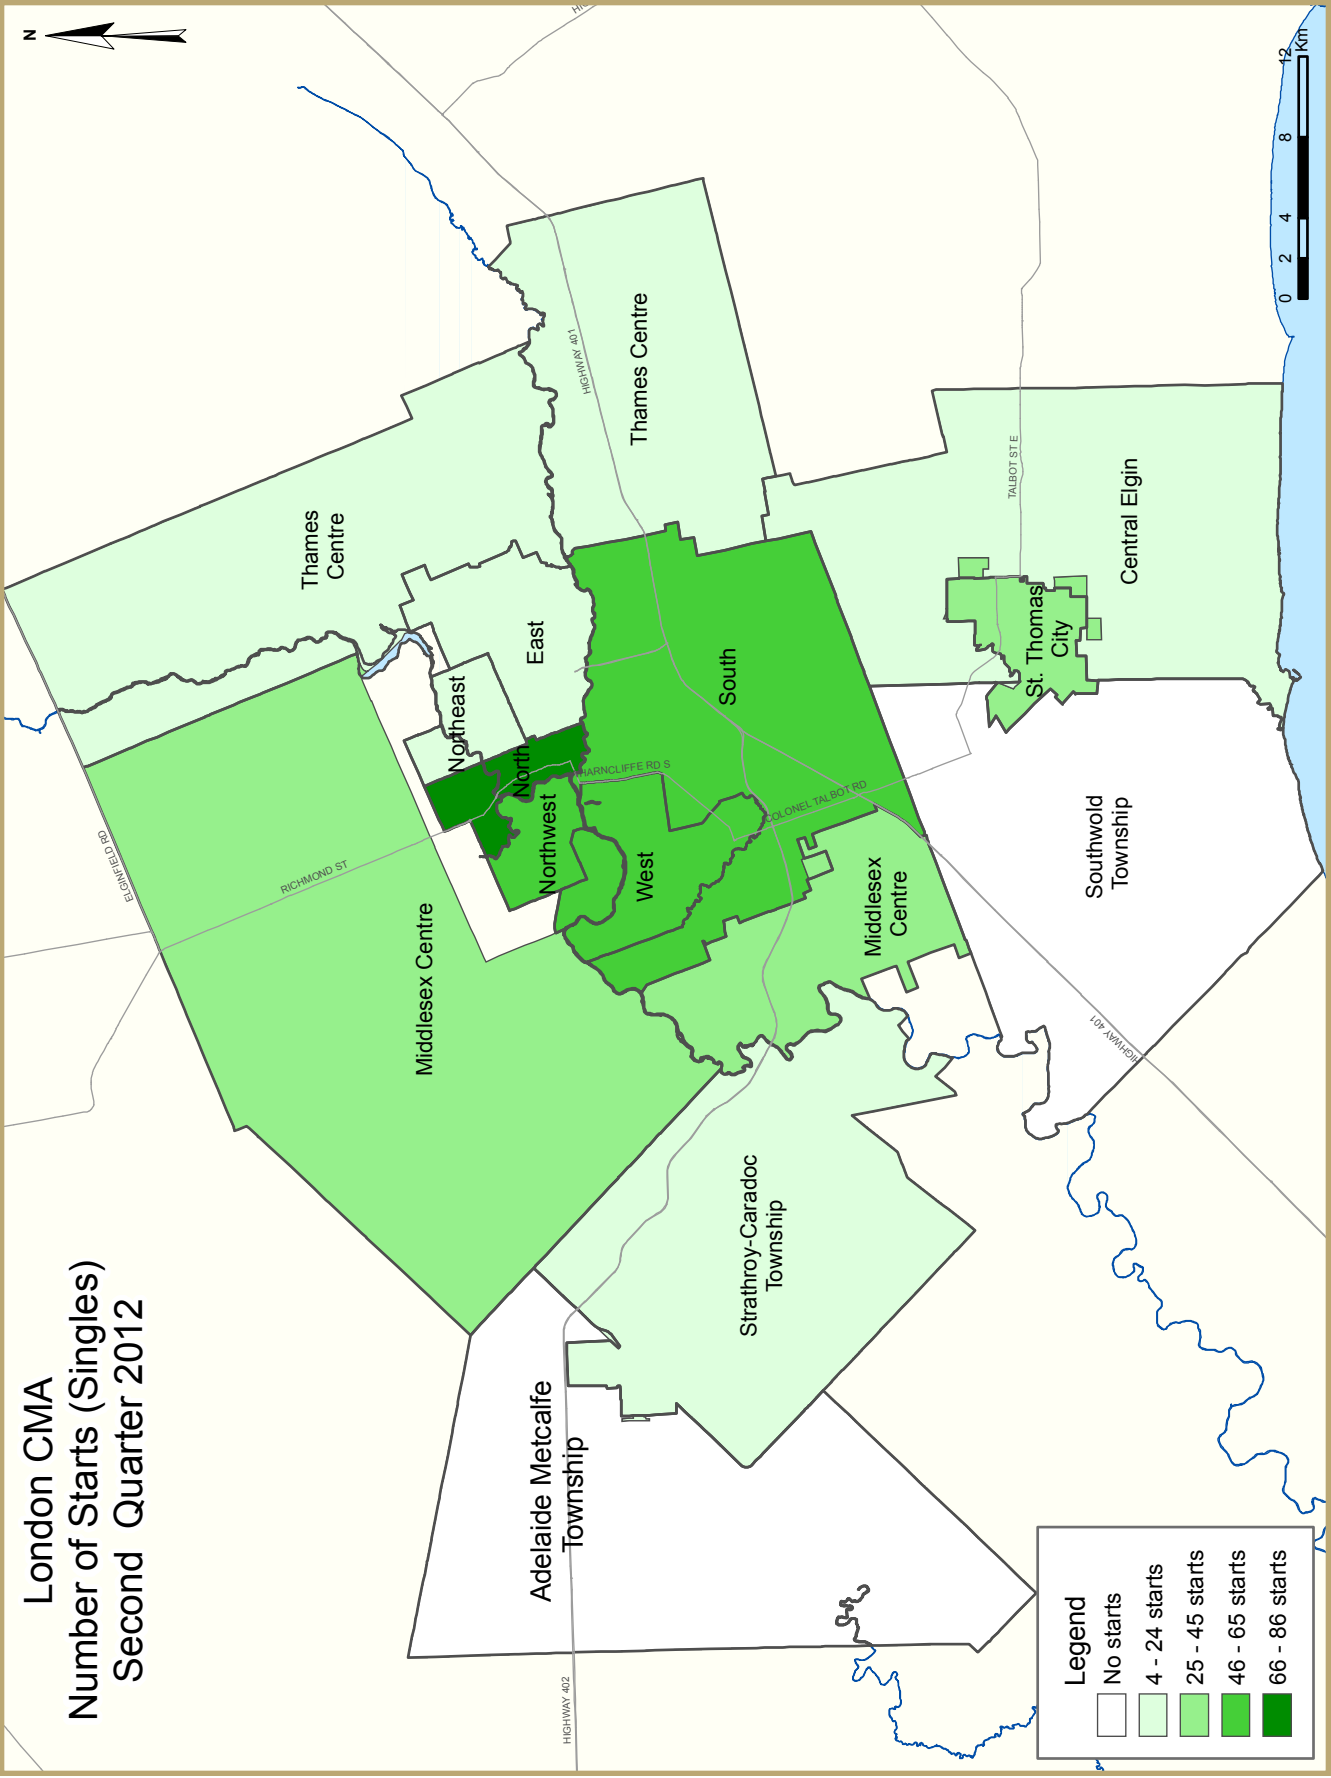

Rents for apartments surveyed in both April 2011 and 2012 were up 1.4 per cent, well below the average increase in all Ontario centres with populations over 10,000. The London market is the most active market in southern Ontario for new rental construction. The increase in the stock of rental apartments (universe) increased 1.3 per cent in London, faster than in any other major market in Ontario. Factors that contribute to demand for rental units in the London

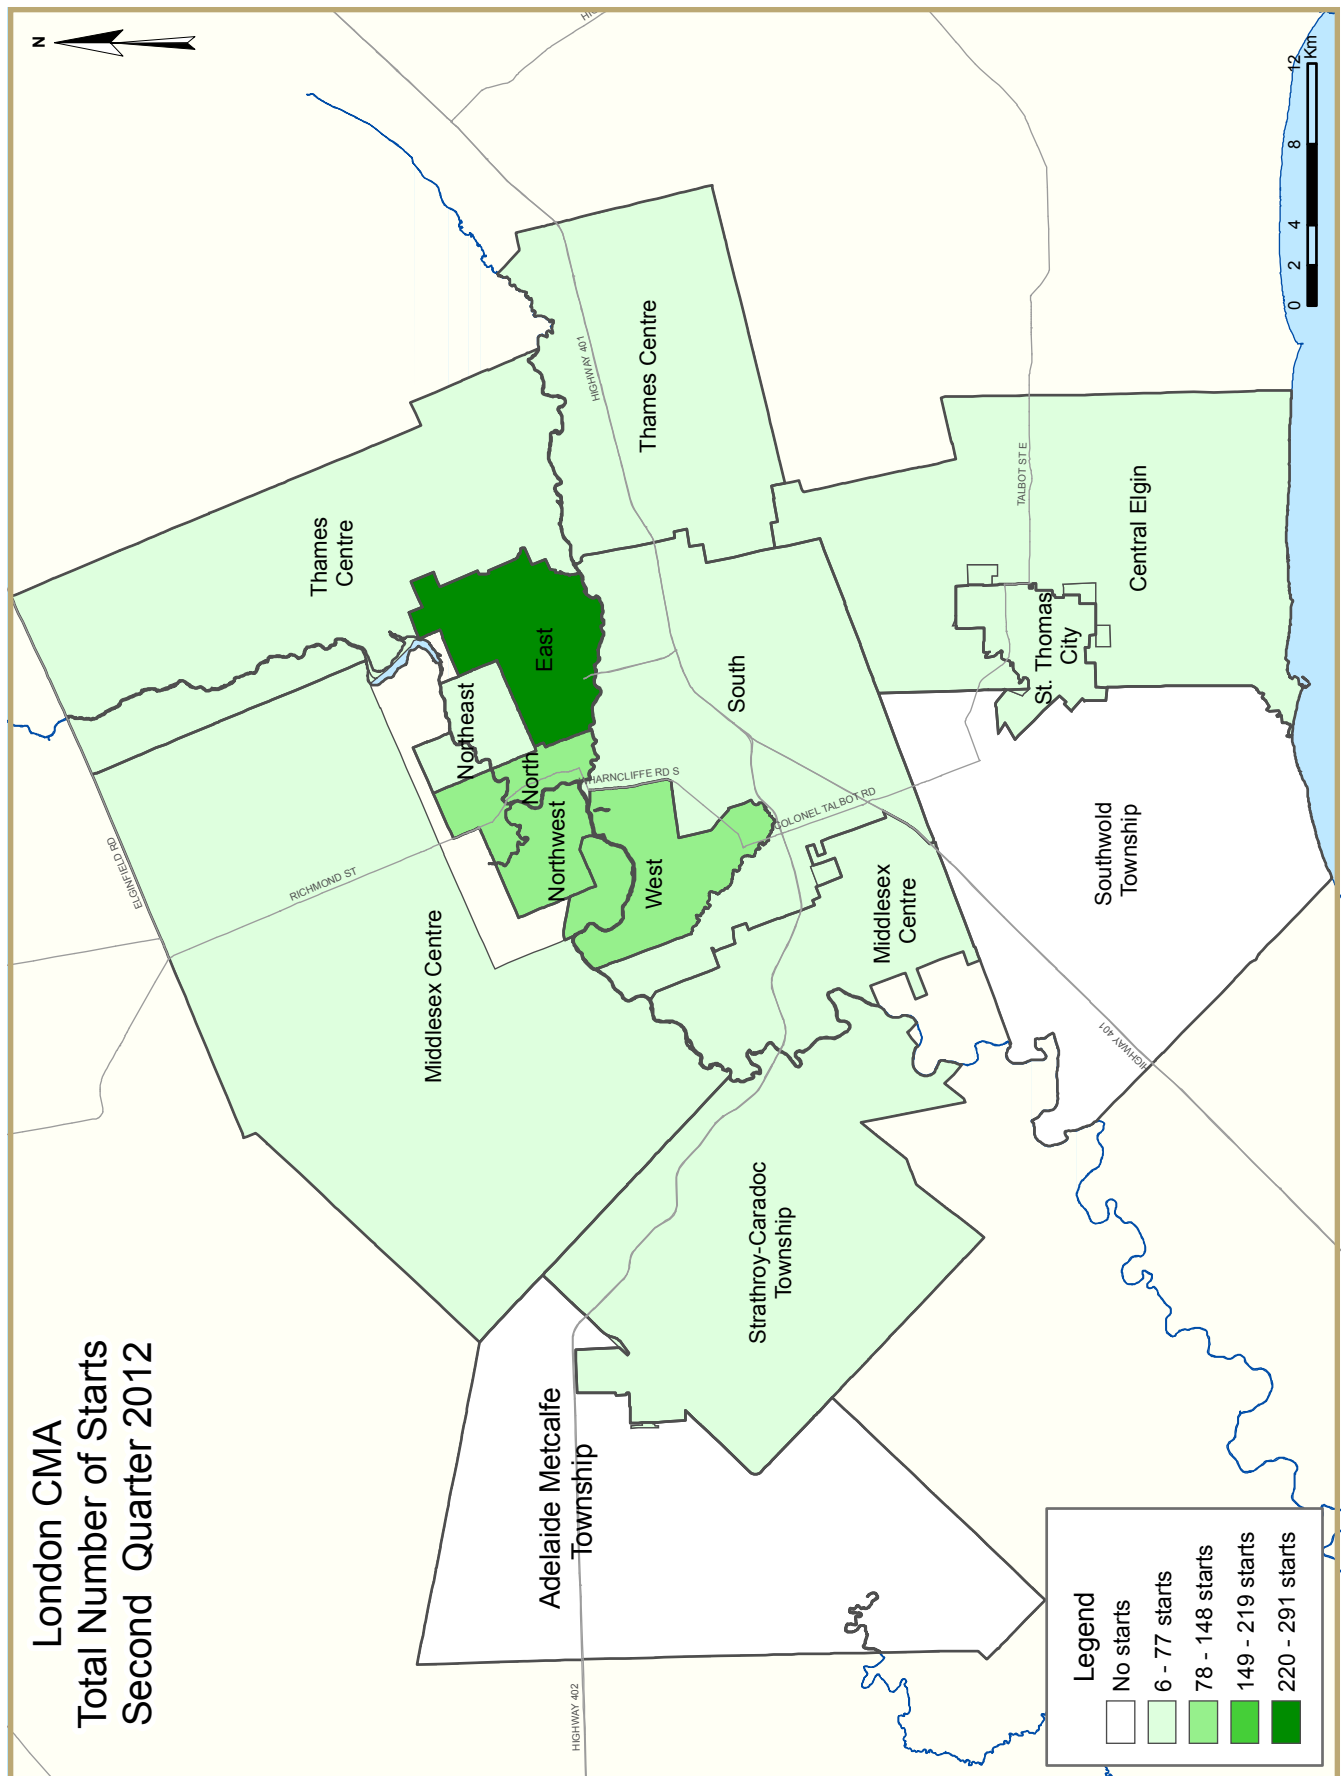

area include a significant pool of post-secondary students, a substantial group of seniors with a high propensity to rent and more immigrants settling in London and wanting to rent.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
