

# HOUSING NOW

## Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: April 2012

### New Home Market

#### Edmonton housing starts strengthen in March

Housing starts in the Edmonton Census Metropolitan Area (CMA) increased in March to 1,030 units from 713 starts in March 2011. Within the City of Edmonton, total housing starts rose 26 per cent in March to 773 units. Outside City limits, the gain

was more pronounced as builders began construction on 257 units, more than double the 98 starts in March 2011. For the year-to-date, housing starts in the Edmonton CMA totalled 2,205 units, up from 1,565 during the first quarter of 2011.

Single-detached starts increased by 66 per cent year-over-year in March, totalling 391 units compared with 236 in March of last year. Starts inside

Edmonton City limits increased 51 per cent from their March 2011 levels, reaching 238 units. Year-to-date, 1,083 single-detached starts were recorded within the Edmonton CMA, representing a 35 per cent increase from the first quarter of 2011.

For the ninth consecutive month, single-detached completions were below levels posted in the previous year. There were 389 single units completed in March, a 16 per cent decline from the 463 units finished in March 2011. The number of single-detached units under construction was up nine per cent from levels posted a year ago, indicating that year-over-year completions will turn positive later this year. There were 420 single-detached units absorbed in March, just five units shy of the 425 units absorbed a year earlier. Since absorptions outpaced completions in March 2012, the inventory of complete and unabsorbed singles declined to 619 units, down from 650 in the previous month. The inventory of single-detached units, including show homes, was six units lower than levels seen in March 2011. This

represents the first year-over-year decline in inventories since September 2010.

Prices of new homes in the Edmonton CMA showed little movement in March. The average price of single-detached units absorbed in March slipped 0.6 per cent compared to March of last year. The average absorbed price was \$503,502 in

March, slightly lower than the \$506,520 recorded in the same month of 2011. Data from Statistics Canada's New House Price Index (NHPI) for the month of February showed a similar trend. Contractor selling prices reported in the index remained fairly stable, increasing 0.1 per cent from the previous year.

Multi-family starts, which consist of semi-detached units, rows, and apartments, increased in March by 34 per cent year-over-year to 639 units. Increases were seen in all types of multi-family units, with particular strength noted in row units. Row starts totalled 66 units in March, compared to just 4 starts in March 2011. The gains in the multi-family market were also attributed to a rise in rental starts, particularly in South Edmonton. With 535 units, the majority of the region's multi-family starts in March occurred inside Edmonton City. So far this year, multi-family starts across the Edmonton CMA were up by 47 per cent to 1,122 units.

Figure 3

Source: CMHC

Completions of multi-family units jumped 131 per cent in March with 415 units being completed, up from 180 completions a year earlier. Year-to-date completions were up 11 per cent in the first quarter of 2012 compared to the same period last year. Inventory of multi-family units was down year-over-year for the second consecutive month. There were 893 complete and unoccupied units at the end of March, down from 1,002 units in March 2011. A total of 5,800 multi-family units were under construction in March, up from the 4,790 units under construction in March of last year.

Total new housing supply across Metro Edmonton, which includes unabsorbed inventory plus units under construction, stood at 10,549 units in March, 12 per cent above the 9,422 units in supply at the end of March 2011.

## Resale Market

### Residential sales on the rise

The pace of residential MLS® sales picked up in the first quarter of 2012. Sales in the Edmonton region rose seven per cent year-over-year from January to March of 2011. A total of 3,783 sales transactions were completed in the first quarter of this year, up from 3,537 sales in the first

Figure 4

Source: RAE

three months of 2011. Each month in the first quarter of 2012 reported higher sales than the previous year, with January reporting the strongest gain of 17 per cent.

The number of new MLS® listings rose 6.4 per cent year-over-year during the first quarter of 2012 in the Edmonton Region. There were 8,311 new listings posted in the first three months of 2012, compared to 7,809 new listings in the same quarter of last year. Active listings averaged 6,203 units from January to March of 2012, down slightly from the 6,336 active listings posted in the first three months of 2011. With sales increasing and active listings declining, the sales-to-active

listings ratio moved up to average 19.4 per cent in the first quarter of 2012, bringing the resale market increasingly closer to balanced territory.

With market conditions becoming more competitive, average sale prices in the first quarter of 2012 rose. The average MLS® residential price was \$329,382 from January to March 2012, up 3.2 per cent from the average selling price of \$319,314 in the first three months of 2011. This increase represents the third consecutive quarterly year-over-year gain in the average price for the Edmonton region.

## Economy

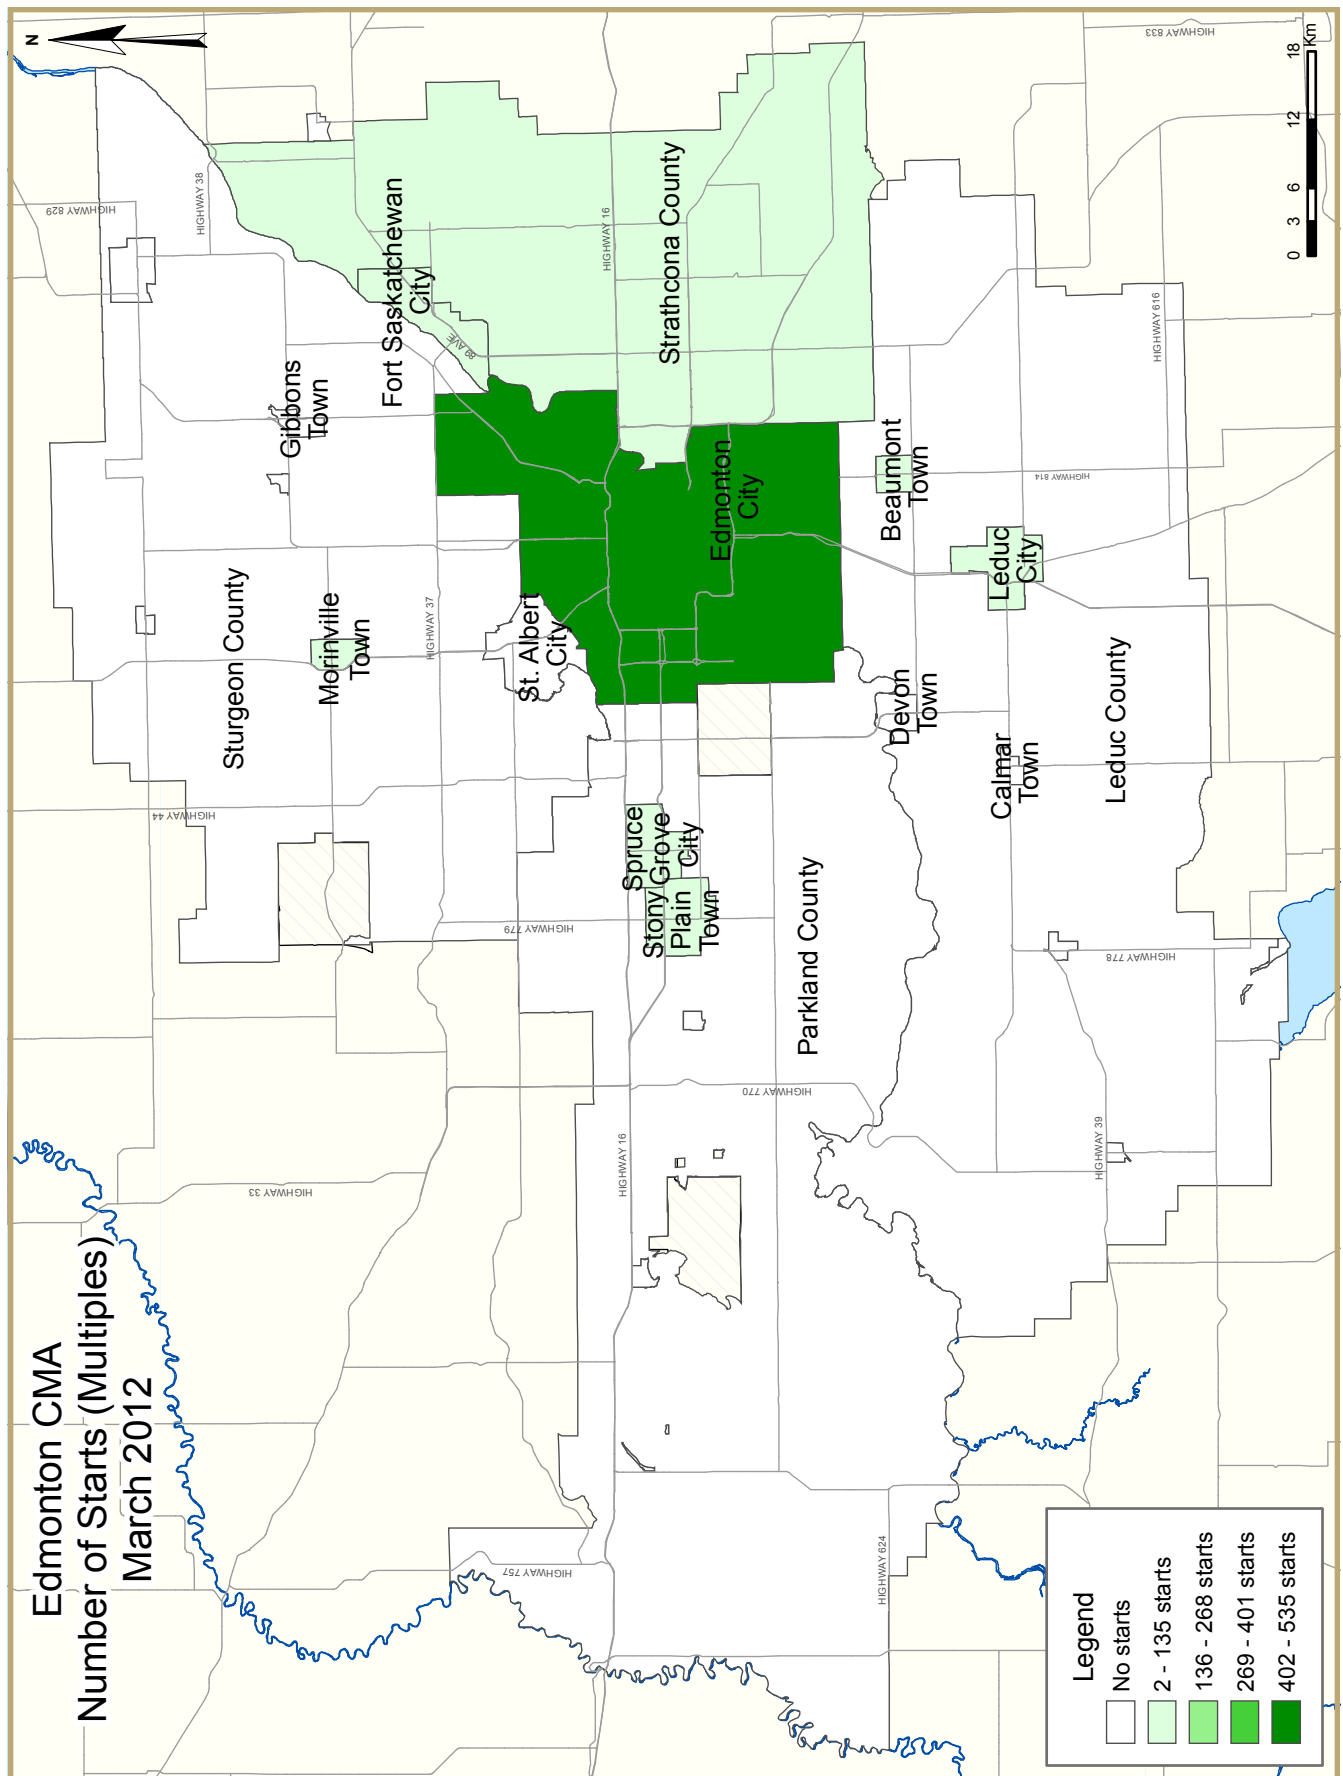

### Labour Market Moderates

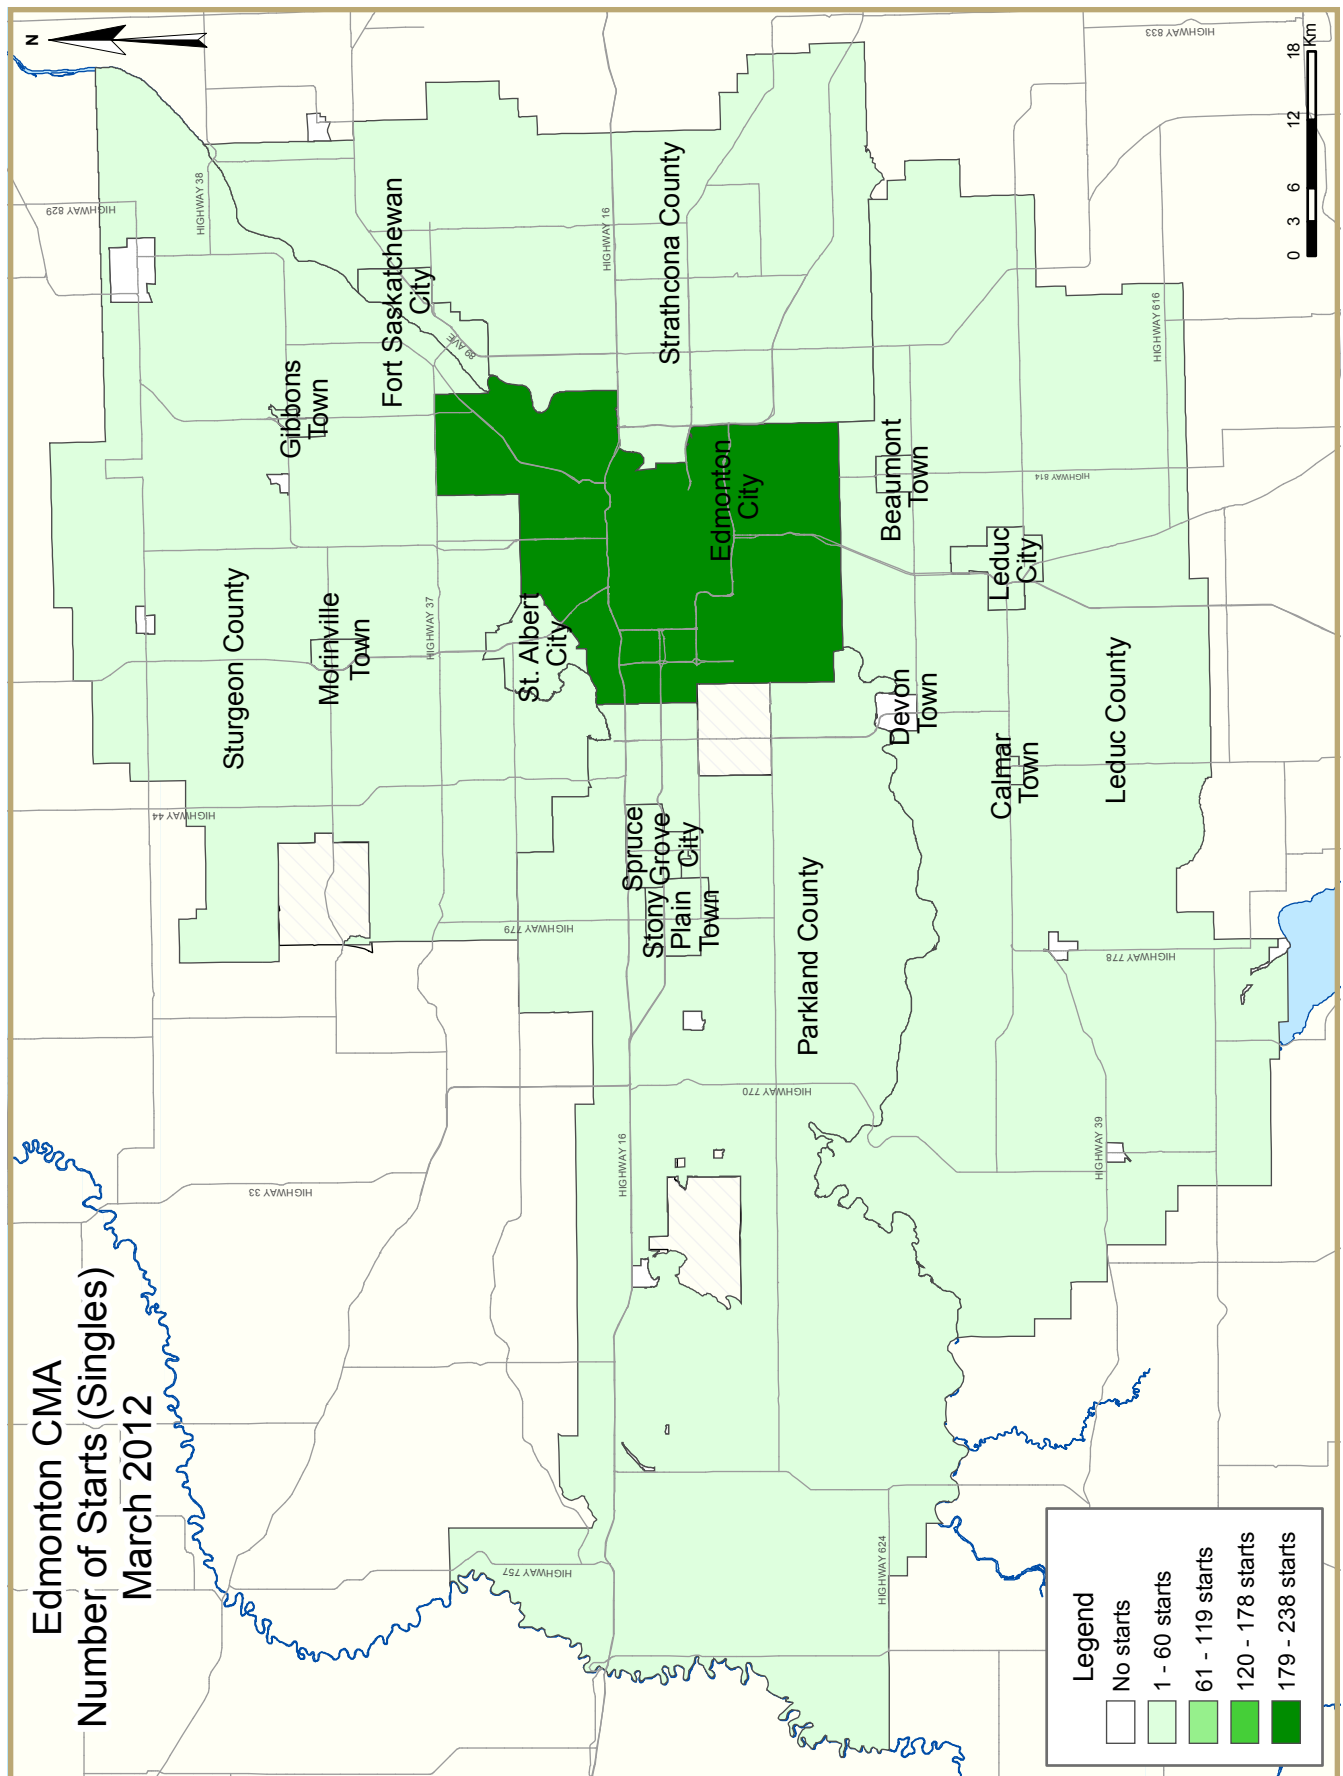

After increasing 5.9 per cent in 2011, average employment in Edmonton moderated in the first quarter of 2012. Seasonally adjusted employment in the first quarter of 2012 averaged 668,300, down from the 681,500 jobs held within Edmonton in the final quarter of 2011. This represents a net loss of 13,200 positions. However, on a year-over-year basis, employment remained higher in the first quarter of 2012 than in the same quarter a year earlier. The seasonally adjusted unemployment rate averaged 5.7 per cent in the first three months of 2012, up from 4.9 per cent in the final quarter of 2011. Despite the weakness posted in the first quarter, employment conditions in Edmonton

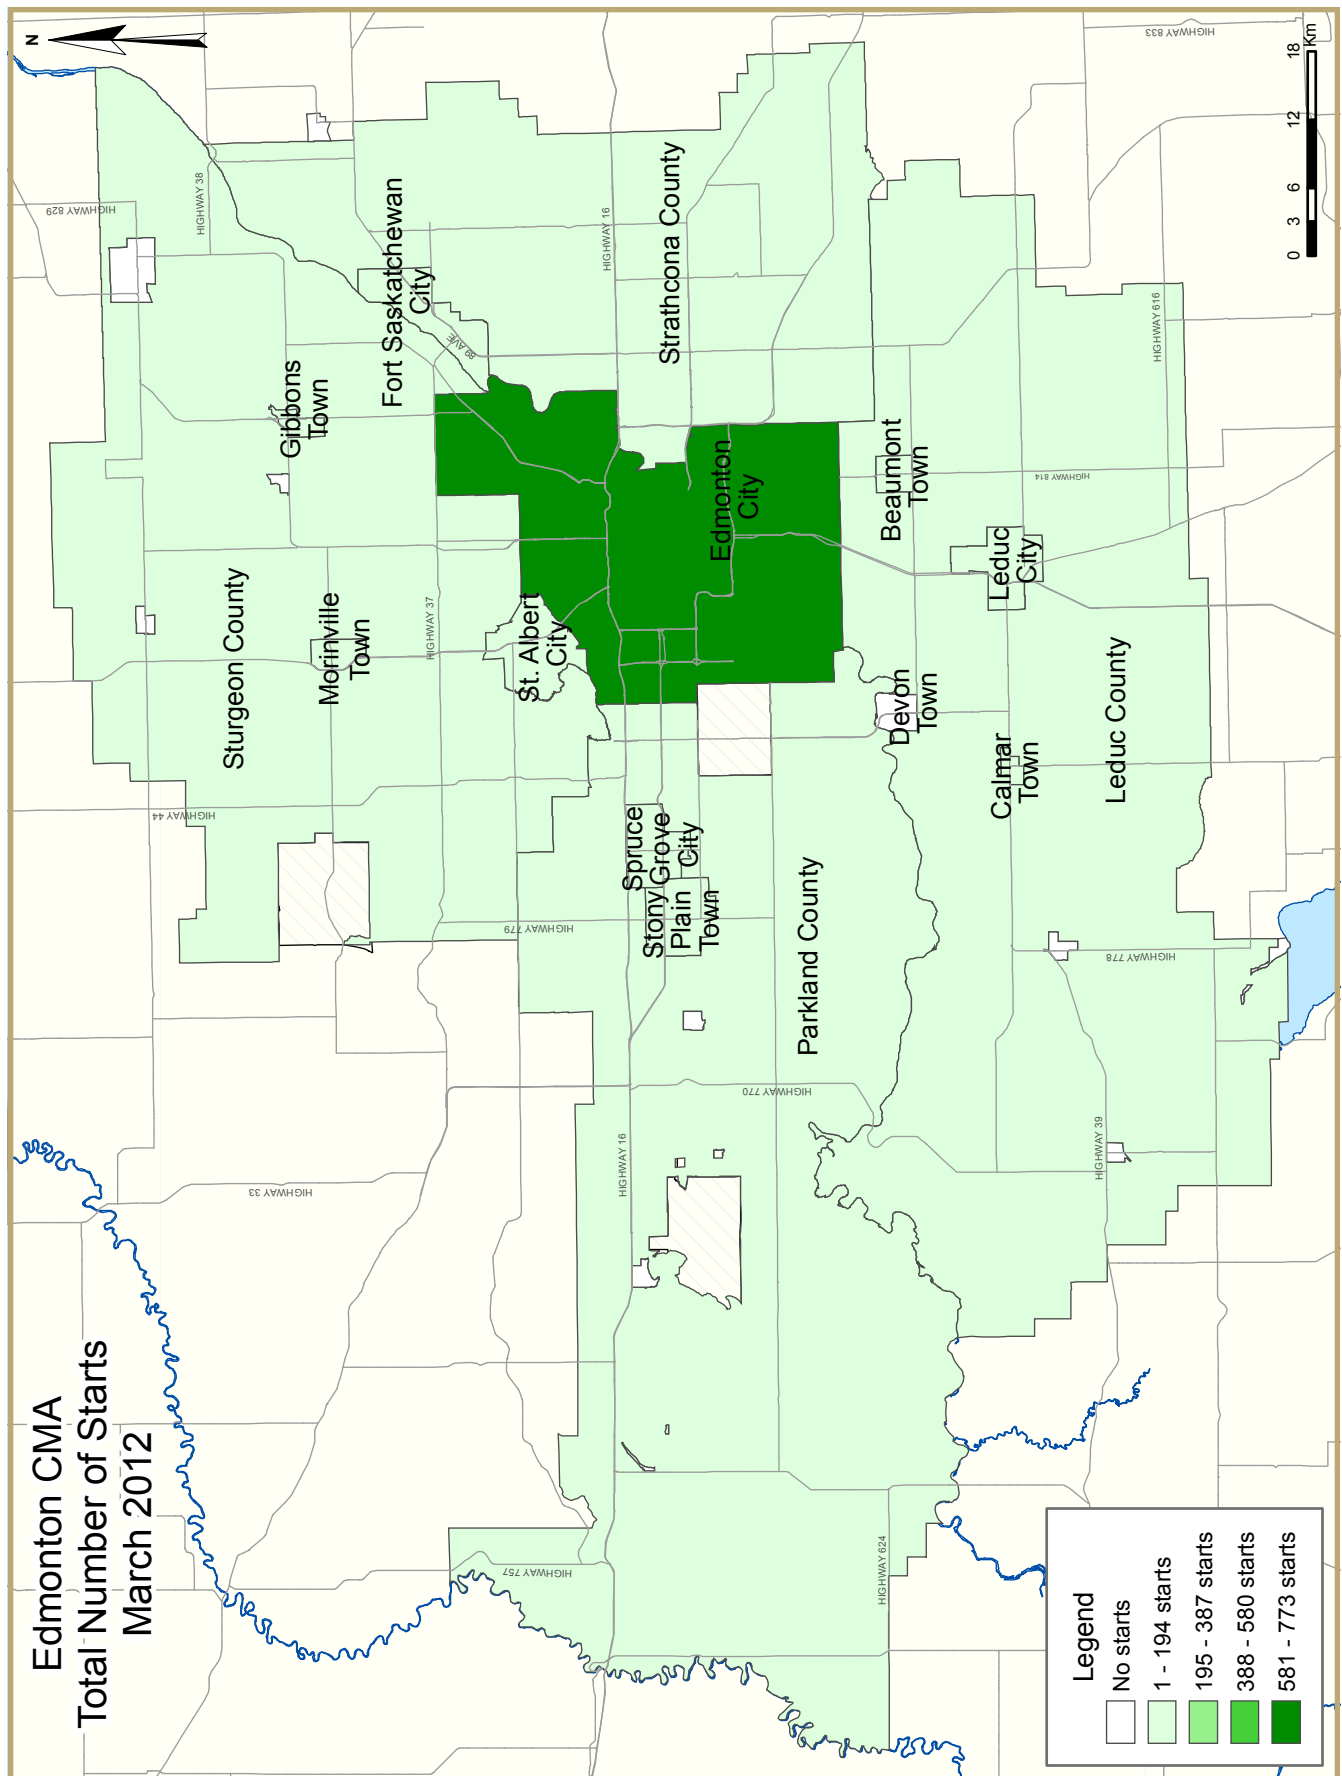

remain strong and should continue to support housing demand. Statistics Canada Average Weekly Earnings for Edmonton showed wages in the Edmonton CMA remained stable in the first three months of 2012. Average weekly earnings were three per cent higher in the first quarter of 2012 compared to the corresponding period in 2011.

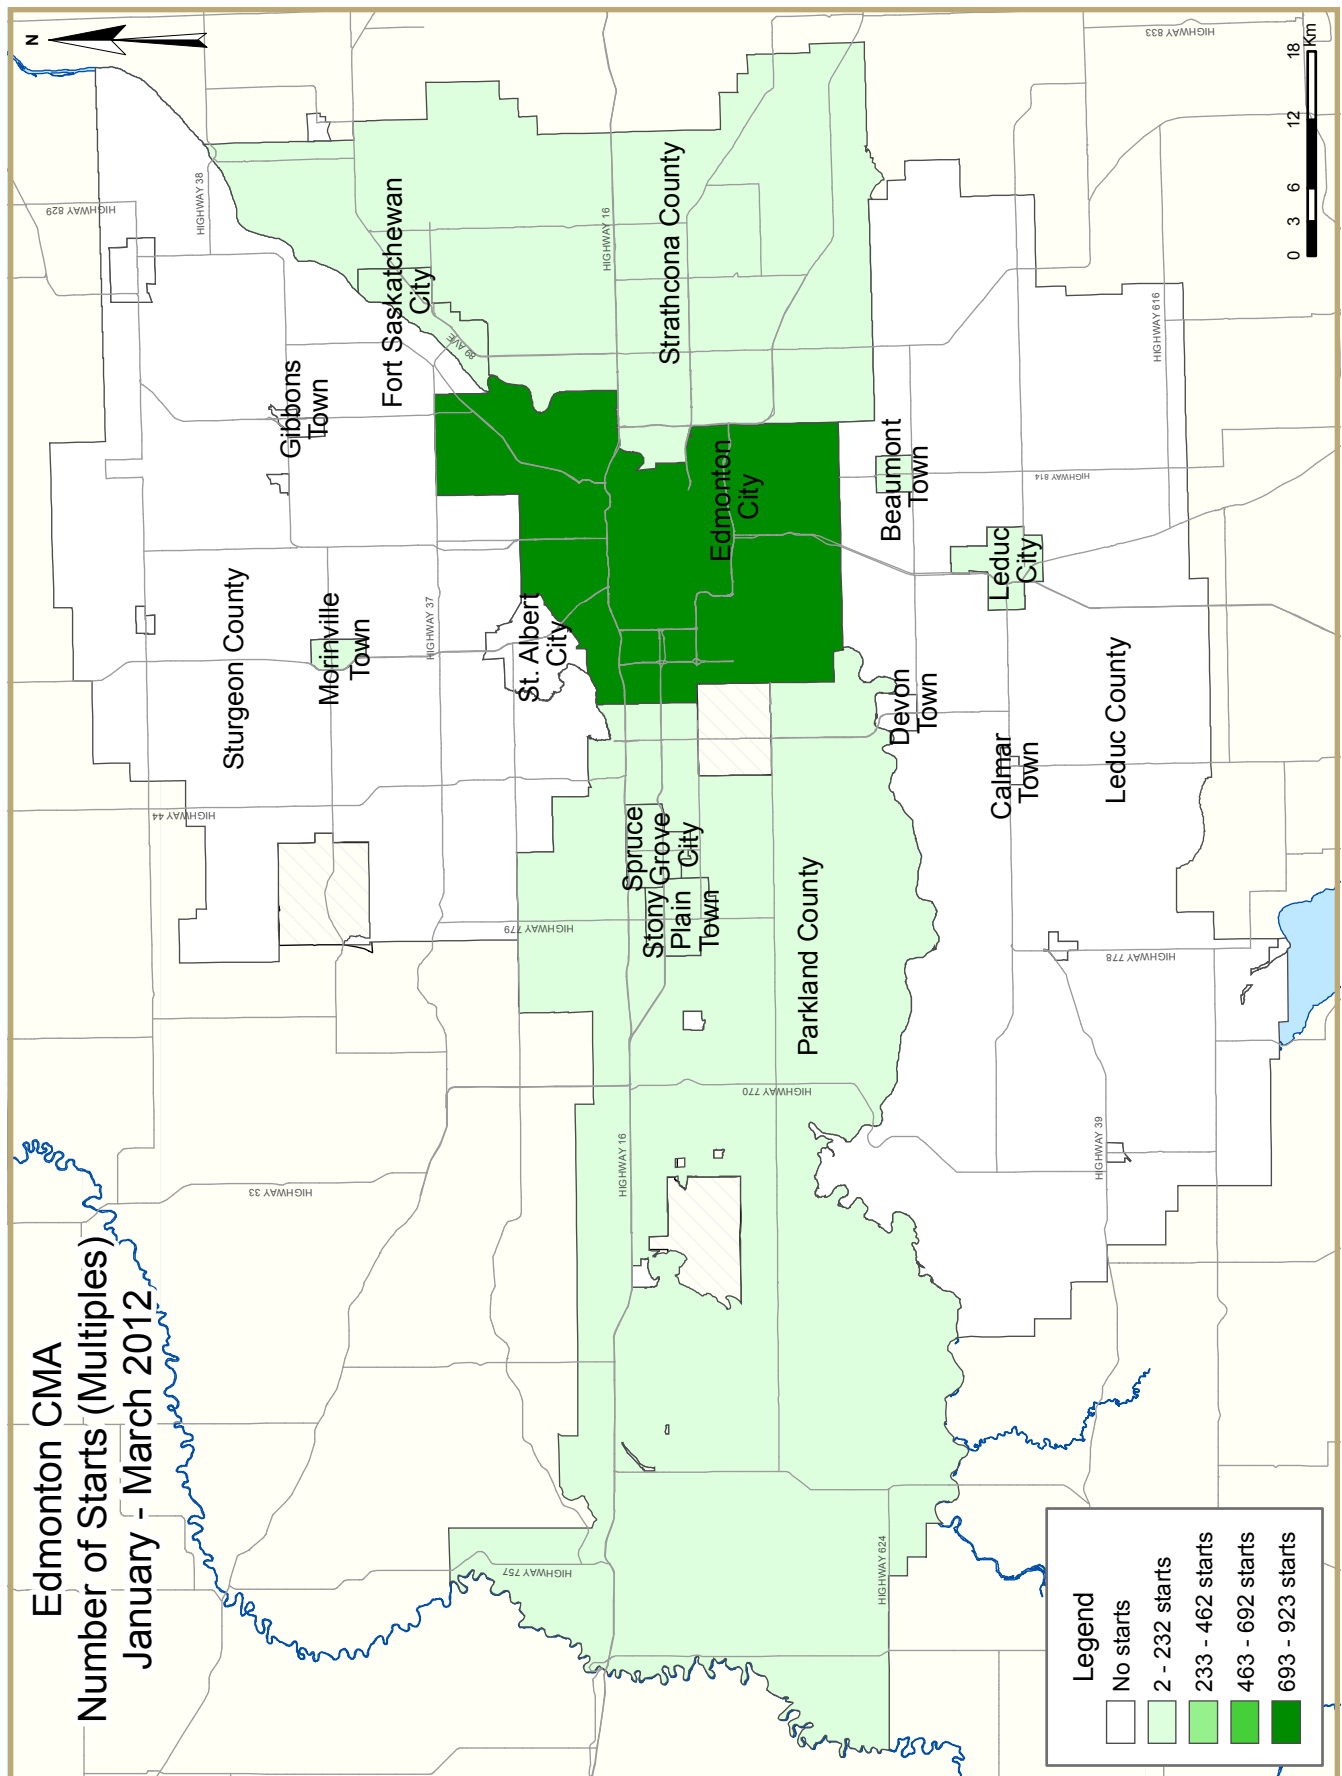

Strong labour market conditions in Alberta last year drew in an increasing number of migrants to the province. Statistics Canada estimates that Alberta gained 12,307 people in the last quarter of 2011, up from just 278 net migrants in the final quarter of 2010. Some 6,192 international net migrants moved into the province in the final three months of 2011, compared with the 4,562 international net migrants who settled in Alberta in

the last quarter of 2010. Migration from other provinces within Canada also increased. There was a net total of 6,010 interprovincial migrants in the fourth quarter of 2011, compared to 2,510 in the same period of 2010. This represented the highest level of interprovincial migration since the second quarter of 2008. The change in the number of non-permanent residents in the province remained positive for the third consecutive quarter. Individuals captured in this category include temporary foreign workers. Throughout 2010, Alberta posted net losses of non-permanent residents, but improving labour market conditions led to a reversal in this trend since the second quarter of 2011.

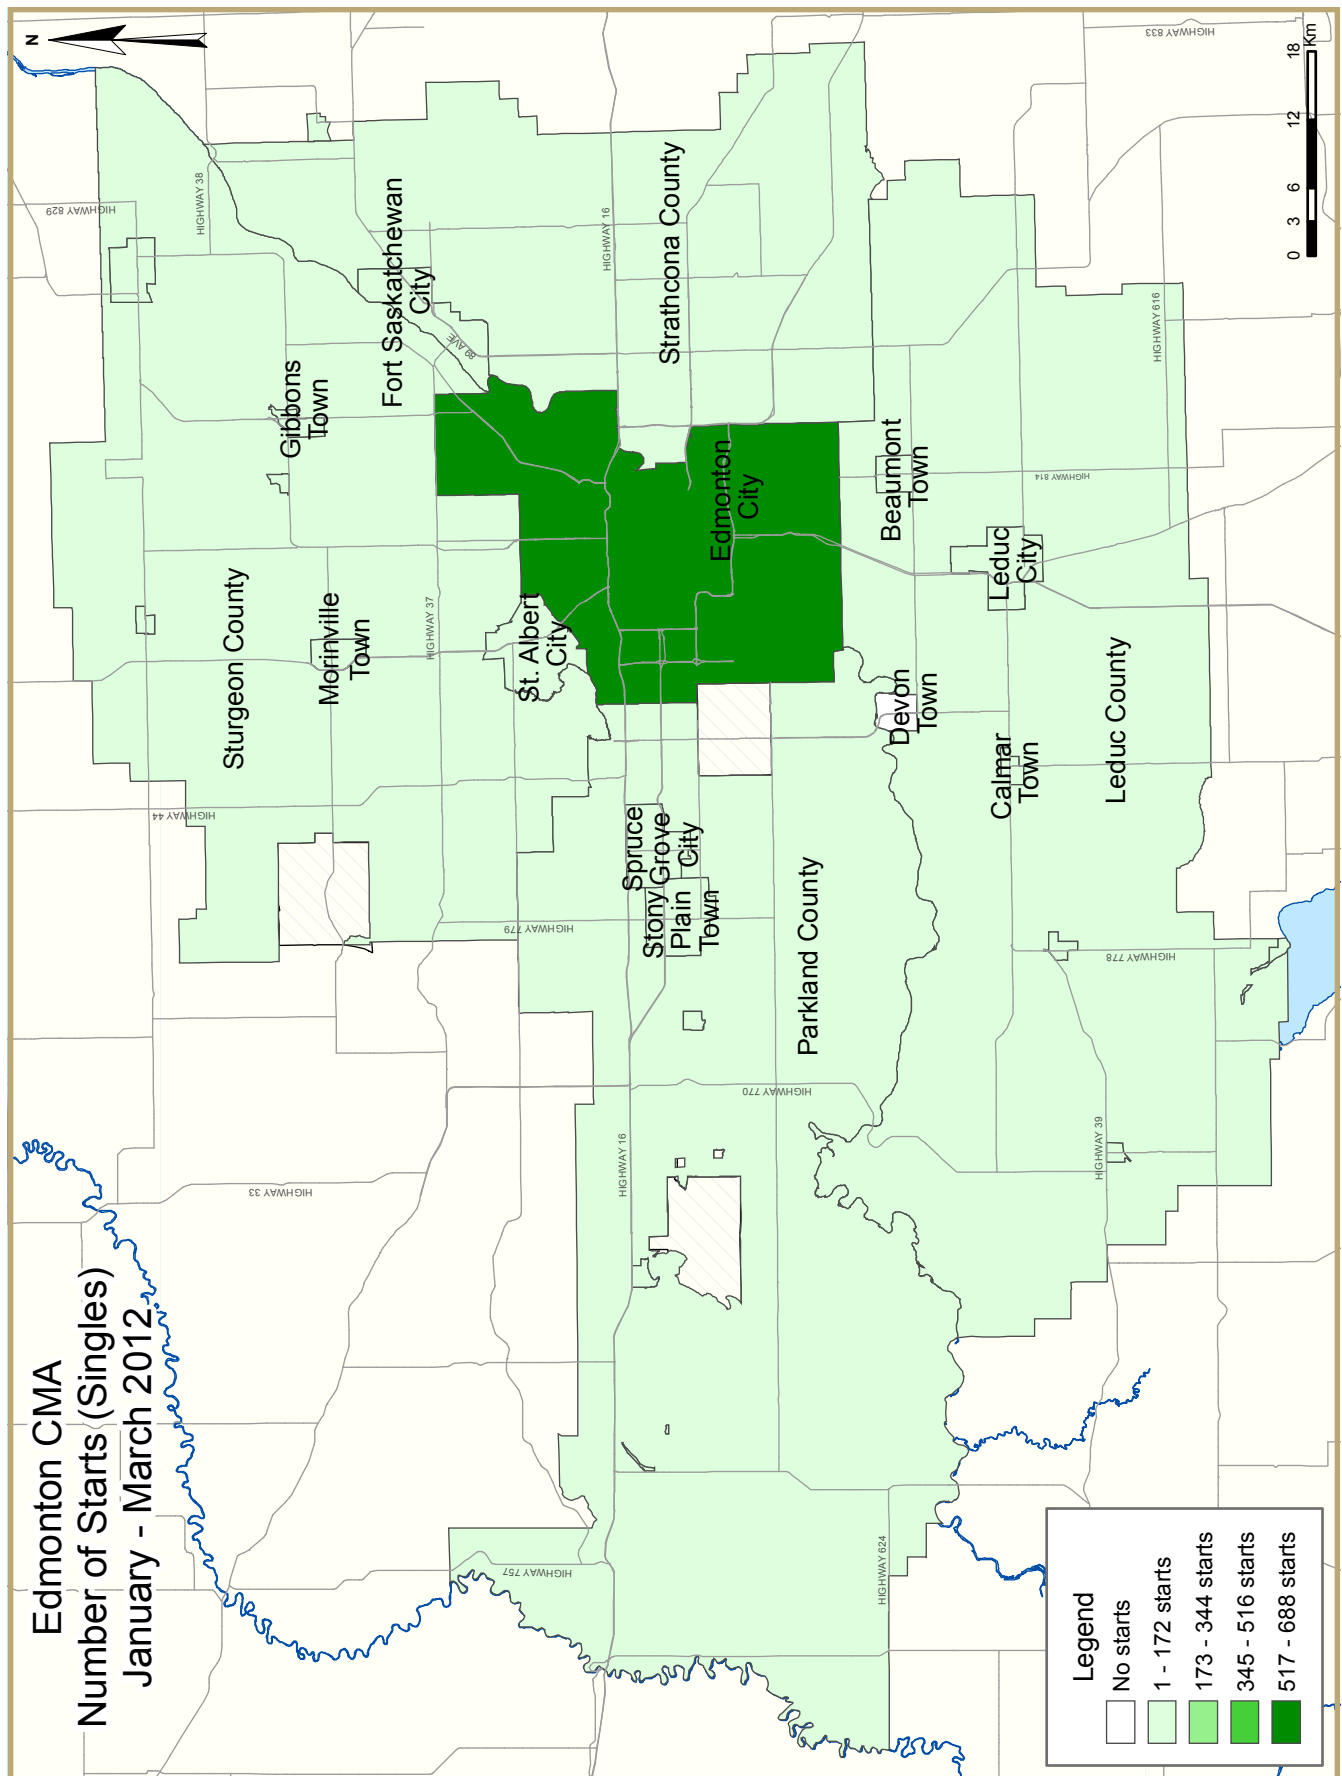

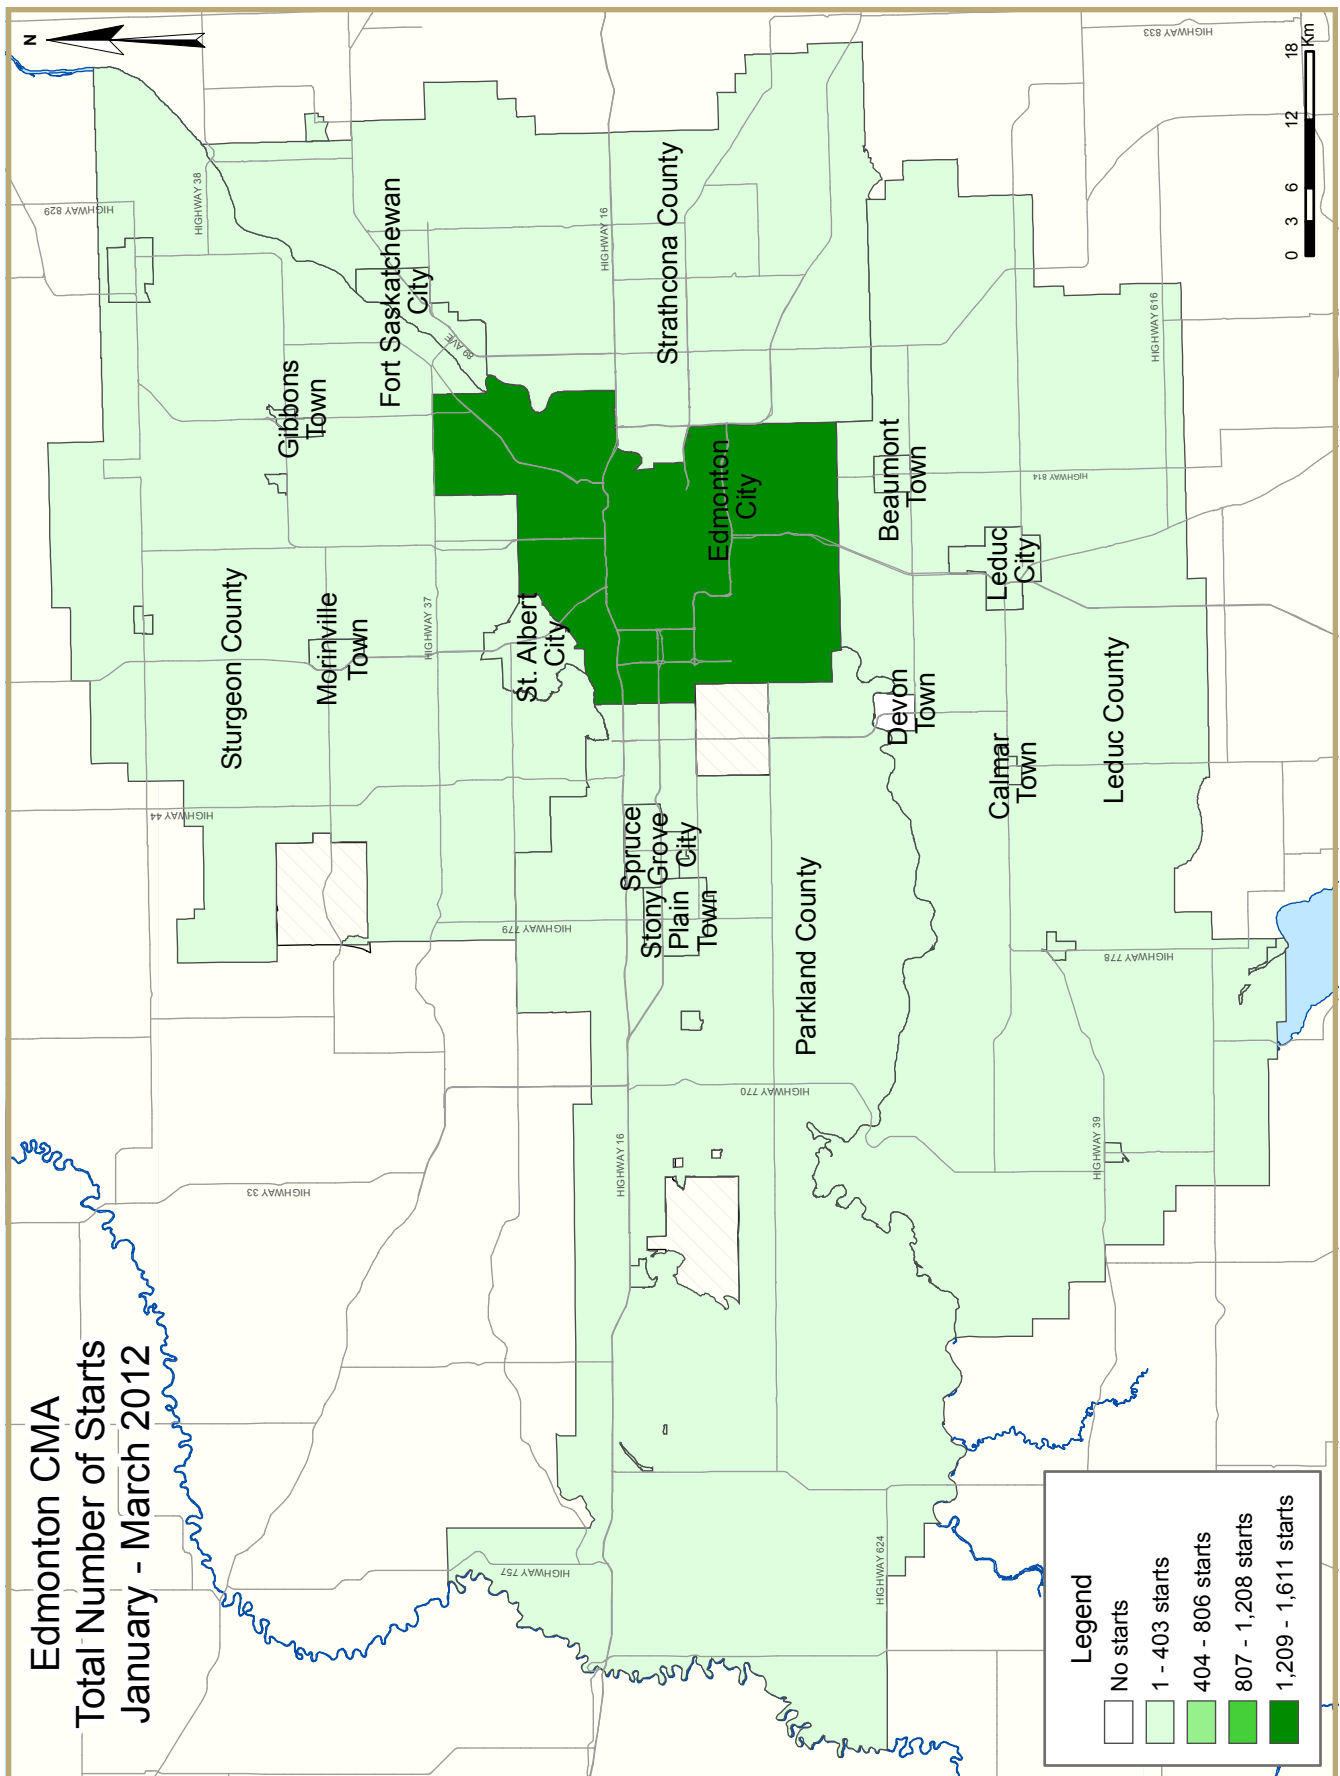

## HOUSING NOW REPORT TABLES

### Available in ALL reports:

- 1 Housing Activity Summary of CMA

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
