Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

Note to users

With the release for the December 2010 New Housing Price Index (NHPI) (table 5), the Producer Prices Division updated the new housing price indexes by changing the base year from 1997 to 2007.

The 2007=100 NHPI series is available retroactively from January 1981 in CANSIM table 327-0046 but has different vector numbers. The 1997=100 based NHPI continues to appear in table 327-0005, however, the 1997=100 based index has not been updated after November 2010. Since the index has been mathematically rebased between January 1981 and November 2010, the index movement for that period is the same for the 1997=100 and 2007=100 series. To assist users, a vector number concordance table found in Appendix I will help users link the new series to the old.

Tables 1 and 2 of this publication have been updated with Industrial product price indexes (IPPI) based in 2002=100. Starting with the release of August 2010 reference month data, the basket of goods used to calculate the IPPI was updated to reflect the sales and expenditures in 2002. This update is to better reflect important changes in production patterns of manufacturers in Canada. The basket must be changed from time to time to ensure that too much importance is not given to some products and too little to others.

The update includes two major changes: the weights of various items in the basket of goods used to calculate the index, which was based on 1997 data, will now be based on 2002 data; and the IPPI base year (the period for which the value 100 is assigned to the index) has changed from 1997 to 2002.

A vector number concordance table between the series contained in the new and old tables is available.

Target release dates for series

Highlights

Second quarter 2012

- The New Housing Price Index (2007=100) increased 0.7% in the second quarter of 2012 following a 0.6% increase the previous quarter. The Atlantic Region (+0.2%), Québec (+0.3%), Ontario (+1.2%) and the Prairie Region (+0.7%) all posted increases, while British Columbia (-0.2%) recorded its fourth consecutive quarterly decrease.
- The composite price index for non-residential building construction rose 0.6% in the second quarter compared with the previous quarter. The quarterly increase was mainly a result of higher labour costs. Year over year the composite price index for non-residential building construction rose 3.1%.
- The Machinery and Equipment Price Index (MEPI) rose 0.8% in the second quarter compared with the previous quarter. The import component was up 1.2% over this period, while the domestic component increased 0.1%. Compared with the second quarter of 2011, the total MEPI increased 4.4%, with the import component rising 6.5% and the domestic component up 1.4%.
- Construction costs for electric utility distribution systems series increased by 0.9% during the first half of 2012 compared with the 2011 annual index. In the first half of 2012, construction costs for the transmission line system series rose 1.4%.

Introduction

This report contains measures of price change for four major categories:

1. elements of construction costs
2. outputs of construction industries
3. capital expenditures
4. consulting engineering

Elements of construction costs include price indexes for the industries that produce most of the construction materials in Canada and unionized building trades workers.

Measures of price change for the outputs of construction industries cover houses (table 5), apartment construction (table 6) and selected non-residential buildings (table 7).

Price changes for capital expenditures are classified, as in the System of National Accounts, into construction and machinery and equipment. When combined with overhead costs, they become plant price indexes. Measures applying to total capitalized cost for certain categories of investment are shown in table 9 for electric utilities.

Consulting Engineering Services Price Indexes (table 10) are published for ten fields of specialization as well as for regional, domestic and foreign markets.

Uses

These measures are useful in analysing price change in construction and fixed capital formation, for contract escalation and for estimates of reproduction cost, either for recosting budgets or for revaluing fixed assets. Data quality, concepts and methodology describing the concepts and practices used in price index preparation are included.

Index formula

Price indexes in this publication have been calculated using either a fixed weight formula or the Chain-Laspeyres index formula of the following general type. (See Appendix I and II)

Fixed weight

Figure 1

Fixed weight

$$I_t = \sum_{i=1}^n W_i (p_{t/o})_i$$

$$W_i = \frac{(P_o \cdot Q_k)_i}{\sum_{i=1}^n (P_o \cdot Q_k)_i}; \quad \sum_{i=1}^n W_i = 1.00$$

The fixed-weight Laspeyres price index I in time t and relative to time base period 0 is given by the summation over all components, that is, i equal to 1 to n , of the relative importance of the i -th component (W_i), times the price relative of the i -th component in time t relative to time base period 0 .

The relative importance of the i -th component, W_i , is given by the following; at the numerator: Total Expenditure ($P0$ times Q_k) in Period k on the i -th component expressed in base period 0 prices; and the denominator: the summation over all components, i equal to 1 to n , of the Total Expenditure ($P0$ times Q_k) in Period k on the i -th component expressed in base period 0 prices.

The summation over all components, i equal to 1 to n , of the relative importance of the i -th component (W_i) is equal to 1.

Chain-Laspeyres Index

Figure 2

Chain-Laspeyres Index

$$I_t = \frac{\sum_{i=1}^n I_{i(t)} W_{i(t-1)}}{\sum_{i=1}^n I_{i(t-1)} W_{i(t-1)}} \times \frac{\sum_{i=1}^n I_{i(t-1)} W_{i(t-2)}}{\sum_{i=1}^n I_{i(t-2)} W_{i(t-2)}} \times \dots = \frac{\sum_{i=1}^n I_{i(t)} W_{i(t-1)}}{\sum_{i=1}^n I_{i(t-1)} W_{i(t-1)}} \times I_{(t-1)}$$

The Chain-Laspeyres price index I in time t is given by multiplication of the following products;

1. at the numerator: summation over all components, that is, i equal to 1 to n , of the price index I of the i -th component in time t (which may also be calculated in a similar manner to I_t) times the relative importance W of the i -th component in time $(t \text{ minus } 1)$; and at the denominator: summation over all components, that is, i equal to 1 to n , of the price index I of the i -th component in time $(t \text{ minus } 1)$ times the relative importance W of the i -th component in time $(t \text{ minus } 1)$;
2. at the numerator: summation over all components, i equal to 1 to n , of the price index I of the i -th component in time $(t \text{ minus } 1)$ times the relative importance W of the i -th component in time $(t \text{ minus } 2)$; and at the denominator: summation over all the components, that is i equal to 1 to n , of the price index I of the i -th component in time $(t \text{ minus } 2)$ times the relative importance W of the i -th component in time $(t \text{ minus } 2)$;
3. Price index products analogous to (1) and (2) are formed for more distant periods.

The Chain Laspeyres price index I at time t thus can be simplified to the multiplication of the following two products;

1. At the numerator; summation over all components, i equal to 1 to n , of the price index I of the i -th component in time (t) times the relative importance W of the i -th component in time (t minus 1); and at the denominator: summation over all components, i equal to 1 to n , of the price index I of the i -th component in time (t minus 1) times the relative importance W of the i -th component in time (t minus 1);
2. Price Index I at time (t minus 1).

Figure 3

The summation over all components

$$\sum_{i=1}^n W_i = 1.00$$

Note in the above that the Chain-Laspeyres index formula is used to reflect the changing relative importance of index component. The above example showing a single level of index aggregation can be extended to two or more levels.

Availability of indexes

Unless otherwise stated, statistics contained in this publication are available from the time reference period to the present. Most figures printed here are also accessible on CANSIM, Statistics Canada's machine readable data base and retrieval system. Availability of data on CANSIM is announced in the Statistics Canada Daily (on the Internet). Monthly and quarterly data are released 5-6 weeks and 6-8 weeks following the end of the reference period, respectively. In the interim, index numbers may be obtained from the regional offices, directly from the Producer Prices Division, or from CANSIM. CANSIM Matrix and data bank access code numbers are provided in each table of this publication.

Indexes available through cost recovery

Construction Building Materials Price Index, Residential and Non-Residential and Construction Machinery and Equipment Price Index (Imported) are available on a cost recovery basis.

For certain terminated series where continuity could not be assured, a proxy series has been created as a possible alternative, e.g. Chemical and Mineral Process Plant Price Index.

Revisions

Price indexes are aggregations of representative price movements combined as weighted averages. Revisions to published weights are usually restricted to major renovations of statistical series. Such changes are described in technical notes available with the first release of a new or revised series of indexes. Exceptions to this practice are stated in the Data quality, concepts and methodology section.

Revisions to prices are, on the other hand, a regular part of index production. The symbol "r" only appears when revisions have been made outside the limits normally applying for the table in question.

See individual survey revision policies in Data quality, concepts and methodology section.

Analysis – Second quarter 2012

Industrial Product Price Index, Selected Construction Materials Series

(See Table 2)

In the second quarter of 2012, the four largest quarterly price changes among the main commodities used in construction were three increases and one decrease in the architectural and “other” groups. Plywood, Douglas fir (+9.2%) posted the strongest increase, followed by plywood, softwood excluding Douglas fir (+9.1%) and building paper, coated (+6.0%). The largest decrease was in diesel fuel (-5.0%).

With this 9.2% increase, prices for plywood, Douglas fir were up for a third straight quarter. Prices had increased 0.9% in the fourth quarter of 2011 and 2.5% in the last quarter.

Prices for plywood, softwood excluding Douglas fir (+9.1%) rose for a fourth consecutive quarter. The increase was bigger in the second quarter of 2012 compared to the three previous quarters (+2.0%, +1.5% and +1.8% respectively).

After experiencing a decline in the first quarter of 2012 (-6.7%), prices for building paper, coated rebounded with 6.0% growth. This was the largest increase since the fourth quarter of 2008.

In the second quarter of 2012, prices for diesel fuel fell 5.0%, the first decrease since the third quarter of 2011.

Compared with the second quarter of 2011, the four biggest price changes among the main commodities used in construction were all increases in the architectural and structural groups. Plywood, softwood excluding Douglas fir (+15.0%), plywood, Douglas fir (+12.5%), lumber and other wood products (+5.4%) and structural shapes, steel including fabricated (+5.4%) posted the largest advances.

Prices for plywood, softwood excluding Douglas fir, when compared with the same quarter the previous year, continued to climb, with a 15.0% increase. It was the third consecutive year-over-year increase.

Compared with the second quarter of 2011, prices for plywood, Douglas fir rose 12.5%, up for a second straight quarter. Prices had increased 1.2% in the first quarter of 2012, on a year over year basis.

Prices for lumber and other wood products were up 5.4% compared with the same quarter a year earlier, posting a second straight year-over-year increase. Prices had risen 0.5% in the first quarter of 2012.

Compared with the second quarter of 2011, prices for structural shapes, steel including fabricated posted an advance of 5.4%. It was a seventh consecutive year-over-year increase. In the previous three quarters, prices had risen 4.5%, 13.8% and 10.0%, respectively.

Construction Union Wage Rates Index

(See table 4)

The Canada Total Construction Union Wage Rates Index (including supplements) increased by 1.4% in the second quarter of 2012. It increased 2.3% compared with the second quarter of 2011.

On a regional basis, the index for Québec registered the highest quarterly change (+1.9%), followed by Ontario (+1.7%), the Atlantic Region as well as the Prairie Region (both +1.1%), and British Columbia (+0.4%).

New Housing Price Index

(See table 5)

The New Housing Price Index (2007=100) increased 0.7% in the second quarter of 2012 following a 0.6% increase the previous quarter. The Atlantic Region (+0.2%), Québec (+0.3%), Ontario (+1.2%) and the Prairie Region (+0.7%) all posted increases, while British Columbia (-0.2%) recorded its fourth consecutive quarterly decrease.

In the Atlantic Region, Halifax (+0.4%) and St. John's (+0.3%) were the two metropolitan regions to post increases from last quarter due to market conditions and higher labour costs. Charlottetown (-0.3%) and the aggregated metropolitan regions of Saint John, Fredericton and Moncton (-0.2%) recorded decreased prices in the second quarter of 2012.

In Québec, both Québec (+0.8%) and Montréal (+0.2%) recorded price increases in the second quarter as a result of market conditions.

Market conditions, increased material and labour costs, as well as higher land development costs contributed to the increases in Ontario. The combined metropolitan regions of Toronto and Oshawa (+1.3%) recorded the largest quarterly price advance. Increases were also observed in Kitchener-Cambridge-Waterloo as well as in Greater Sudbury and Thunder Bay (both +1.0%), Hamilton (+0.9%), Ottawa -Gatineau (+0.8%), London (+0.6%), St. Catharines-Niagara (+0.5%) and Windsor (+0.2%).

Higher land developments costs as well as increased material and labour costs contributed to the increases in the Prairie Region this quarter. Winnipeg and Regina (both +1.2%), Saskatoon (+0.8%), Calgary (+0.7%) and Edmonton (+0.6%) all showed increases from last quarter.

In British Columbia, prices decreased in Victoria (-0.8%) as builders recorded lower negotiated selling prices while Vancouver remained unchanged from last quarter.

Apartment Building Construction Price Index

(See table 6)

The composite price index for apartment building construction increased 0.6% in the second quarter compared with the previous quarter. The quarterly increase was mainly a result of higher labour costs.

All seven census metropolitan areas (CMAs) surveyed reported quarterly increases, ranging from 0.2% in Montréal to 1.0% in both Calgary and Edmonton.

Year over year, the composite price index for apartment building construction was up 2.8%. Of the CMAs surveyed, Edmonton (+4.6%) and Calgary (+4.5%) recorded the largest year-over-year increases, while Toronto (+2.0%) recorded the smallest gain.

Chart 1

Apartment building construction price indexes, composite and selected Census Metropolitan Areas (CMAs)**Non-residential Building Construction Price Index**

(See table 7)

The composite price index for non-residential building construction rose 0.6% in the second quarter compared with the previous quarter. The quarterly increase was mainly a result of higher labour costs.

All of the seven census metropolitan areas (CMAs) surveyed reported quarterly increases, ranging from 0.3% in Montréal to 0.8% in both Edmonton and Calgary.

Year over year the composite price index for non-residential building construction rose 3.1%. Of the CMAs surveyed, Edmonton (+4.2%) and Calgary (+4.0%) posted the largest year-over-year increases, while Halifax (+1.9%) recorded the smallest gain.

Chart 2

Non-residential building construction price indexes, composite and selected census metropolitan areas (CMAs)**Machinery and Equipment Price Index**

(See table 8)

The Machinery and Equipment Price Index (MEPI) rose 0.8% in the second quarter compared with the previous quarter. The import component was up 1.2% over this period, while the domestic component increased 0.1%.

All industries posted increases in prices of machinery and equipment purchased in the second quarter. The largest contributor to the total MEPI quarterly increase was manufacturing (+0.9%), with the transportation equipment manufacturing sub-component advancing 0.9% and the paper manufacturing sub-component up 1.0%. The second largest contributor to the quarterly increase was finance, insurance and real estate (+0.5%).

On a commodity basis, most commodities posted price increases in the second quarter, with the other industry specific machinery (+1.1%) and construction machinery (+2.0%) contributing the most to the quarterly increase of the total MEPI.

The Canadian dollar depreciated 0.9% against the US dollar in the second quarter compared with the previous quarter. Variations in exchange rates can have a strong influence on the MEPI given the high weight that imported machinery and equipment has on the index.

Compared with the second quarter of 2011, the total MEPI increased 4.4%, with the import component rising 6.5% and the domestic component up 1.4%. The movement in the import component was partly influenced by the year-over-year change in the Canadian dollar (-4.2%) against the US dollar.

Chart 3
Machinery and equipment price indexes

Index 1997=100

Chart 4
Machinery and equipment price indexes by industry of purchase

Index 1997=100

Electric Utility Construction Price Index

(See table 9)

First half of 2012

Construction costs for electric utility distribution systems series increased by 0.9% during the first half of 2012 compared with the 2011 annual index. Higher costs for labour (+3.9%) and construction indirects, which includes engineering, administration and overheads (+2.1%), were the major contributors to the increase of the index.

In the first half of 2012, construction costs for the transmission line system series rose 1.4%, while the transmission line component increased 0.6%, largely as a result of installation labour (+3.9%). The substation component increased by 1.8%, led by a 2.1% increase in station equipment costs.

Consulting Engineering Services Price Index

(See table 10)

2010

The Canada total Consulting Engineering Services Price Index increased 4.1% in 2010 compared with 2009.

Prices rose for all specializations, except environmental services, ranging from gains of 1.5% for other engineering services, to 8.9% for buildings.

Infrastructure Construction Price Index

An analytical price index series measuring annual changes in the cost of municipal infrastructure construction funded by development charges has been developed by Statistics Canada on behalf of the City of Ottawa. The annual index for 2011 was 145.5 (2001 =100), an increase of 3.2% over the revised annual index of 141.0 for 2010. The indexes for 2009, 2008, 2007, 2006, 2005, 2004, 2003 and 2002 were 136.7, 133.3, 125.0, 120.0, 113.1, 107.8, 104.8 and 102.3 respectively.

2307	Union Wage Rate Indexes for Major Construction Trades, 20-City Composite
2310	New Housing Price Index
2312	Machinery and Equipment Price Index
2317	Non-Residential Building Construction Price Indexes
2328	Consulting Engineering Services Price Indexes
2330	Apartment Building Construction Price Indexes

Selected summary tables from Statistics Canada

- *Construction price indexes, by selected metropolitan areas — New housing price indexes (monthly)*
- *Economic indicators, by province and territory (monthly and quarterly)*
- *New housing price index*
- *Machinery and equipment price indexes*
- *Construction price indexes*
- *Producer price index, services*

Statistical tables

Table 1
Industrial product price indexes, by industry

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Annual average
2002=100													
Veneer and plywood mills (v53384809) -													
2009	83.8	83.0	82.8	81.5	80.3	81.0	84.7	86.5	85.0	80.5	79.2	79.9	82.4
2010	79.6	82.0	81.6	85.1	87.9	83.0	80.6	79.4	80.5	77.9	76.9	77.0	81.0
2011	77.8	77.6	77.7	78.4	76.4	76.2	76.3	77.1	78.9	79.4	77.9	78.3	77.7
2012	78.8	78.9	80.2	81.1	81.9	84.3
Asphalt paving, roofing and saturated materials manufacturing (v53384835) - 32412													
2009	141.3	141.0	142.5	147.7	157.8	160.5	155.0	154.5	150.0	148.5	152.2	148.4	150.0
2010	151.8	155.1	155.3	157.5	162.5	162.8	163.3	157.8	155.6	159.3	156.4	157.1	157.9
2011	156.4	158.1	164.1	170.7	173.9	177.6	174.9	172.4	171.9	171.4	172.2	169.8	169.4
2012	166.9	166.7	169.1	176.4	178.3	178.8
Ventilation, heating, air-conditioning and commercial refrigeration equipment manufacturing (v53384918) - 3334													
2009	102.7	102.8	103.0	102.8	101.5	101.3	101.3	101.0	101.0	100.9	100.9	100.9	101.7
2010	100.6	100.8	100.6	100.5	100.2	100.2	100.2	100.1	100.0	99.9	99.9	99.8	100.2
2011	99.8	100.0	99.8	99.8	99.9	100.0	99.9	100.1	100.2	100.9	100.9	100.9	100.2
2012	100.9	100.9	100.9	100.9	101.0	101.1
Household appliance manufacturing (v53384937) - 3352													
2009	105.5	105.9	105.8	105.9	105.5	105.5	105.3	105.5	105.6	105.5	105.7	105.7	105.6
2010	105.4	105.4	105.3	105.3	105.0	105.0	105.0	105.0	105.0	105.1	105.1	105.1	105.1
2011	105.2	105.3	105.4	105.4	104.6	104.6	104.9	105.0	105.0	105.1	105.2	105.2	105.1
2012	104.9	104.9	104.9	104.9	105.0	105.5
Communication and energy wire and cable manufacturing (v53384944) - 33592													
2009	132.3	132.2	132.8	134.3	137.5	137.2	138.2	139.1	140.1	141.0	141.6	141.8	137.3
2010	144.0	146.2	146.5	144.6	144.1	139.4	138.7	141.1	141.5	145.0	146.2	146.9	143.7
2011	148.5	150.1	150.6	149.4	149.7	150.1	151.4	150.8	150.4	148.3	148.8	148.4	149.7
2012	149.0	151.4	151.7	152.2	152.3	152.2
Plastic pipe, pipe fitting and unlaminated profile shape manufacturing (v53384858) - 32612													
2009	122.2	122.3	122.8	123.3	120.7	118.7	119.1	118.0	119.4	119.5	119.3	118.5	120.3
2010	118.1	122.6	123.4	126.3	127.5	128.3	127.4	128.0	127.9	126.5	125.8	125.8	125.6
2011	124.9	124.3	126.3	125.7	130.2	131.2	131.4	131.2	131.4	129.9	129.2	130.0	128.8
2012	128.8	128.8	128.8	131.5	130.7	132.6
Ready-mix concrete manufacturing (v53384874) - 32732													
2009	125.5	125.5	124.9	124.1	125.1	124.9	125.0	125.0	125.1	125.2	125.1	125.1	125.0
2010	126.1	126.4	126.3	125.9	125.9	125.7	125.5	125.5	125.7	125.6	125.8	125.9	125.9
2011	126.6	126.4	126.9	126.6	127.1	127.2	128.4	128.0	128.5	128.6	128.7	128.7	127.6
2012	129.5	129.7	129.6	129.6	129.7	129.7
Glass and glass product manufacturing (v53384871) - 3272													
2009	100.8	101.0	101.2	100.7	99.9	99.6	99.5	99.2	99.1	98.1	98.2	98.1	99.6
2010	97.6	97.8	98.2	96.0	96.4	96.4	96.2	96.7	98.5	98.3	98.3	98.0	97.4
2011	97.9	97.6	97.5	97.1	97.2	97.3	97.4	98.1	98.3	98.5	98.7	98.7	97.9
2012	98.6	98.4	98.3	97.5	97.7	97.9
Spring and wire product manufacturing (v53384905) - 3326													
2009	109.4	109.2	108.8	107.4	106.6	106.5	106.2	106.2	106.4	106.0	106.0	106.0	107.1
2010	106.1	106.5	106.5	106.9	108.4	108.4	108.5	108.5	108.1	108.2	108.0	108.0	107.7
2011	108.0	108.4	108.6	108.6	109.1	109.4	109.4	109.6	109.9	110.0	110.0	110.0	109.2
2012	109.8	109.6	109.7	109.6	109.3	109.3
Paint and coating manufacturing (v53384849) - 32551													
2009	117.8	117.5	116.6	116.4	116.3	117.4	117.2	117.7	118.0	116.7	117.1	117.5	117.2
2010	117.7	117.9	117.9	118.4	118.9	118.8	118.8	118.9	117.9	118.4	118.6	118.8	118.4
2011	120.2	121.3	121.7	122.2	122.4	122.4	122.3	122.4	122.5	122.7	122.7	122.7	122.1
2012	125.0	125.0	125.5	125.8	125.3	125.2

Industrial product price indexes, manufacturing

(CANSIM Tables 329-0056 to 329-0068: 2002=100)

Introduction

Industry price indexes (See Catalogue no. 62-011-X for more complete set of index series) are presented in this publication to give an indication of factory gate price movement for those manufacturers who specialize in producing building materials.

Characteristics

General

These indexes measure changes in shipment selling prices of important commodities sold by major manufacturing establishments. The series calculated for industry indexes are classified under the 2002 North American Industry Classification System (NAICS) whereas those for commodity indexes are classified according to the Principal Commodity Group Aggregates (PCGA) classification.

Prices used

Prices are for shipments, net (discounts allowed) as of the middle of the month, (f.o.b. plant).

Adjustments to prices

Quality adjustments are made for changes in physical characteristics or terms of sale in order to arrive at estimates of pure price change. No adjustments are made for changes in sales taxes.

Weight base

Weights, which determine the relative importance of commodities within each index, were derived from the 2002 Input/Output tables.

Index formula

Price indexes are base-weighted.

Revisions

Generally, indexes are subject to revisions for six months.

Catalogue no. 62-558-X Industry Price Indexes, Users' Guide

For more information, or to enquire about the concepts, methods or data quality of this release, contact Statistics Canada's National Contact Centre (toll-free 1-800-263-1136; 613-951-8116; infostats@statcan.gc.ca) or the Media Hotline (613-951-4636; mediahotline@statcan.gc.ca).

Construction union wage rates and indexes

(Table 327-0045: 2007=100 Wage Rate Indexes monthly 1971 to present; Table 327-0003: Wage Rates monthly 1971 to present)

Introduction

These series measure changes over time in the current collective agreement rates for 16 trades engaged in building construction in 22 metropolitan areas. Union wage rates by trade are also published for 22 metropolitan areas for both the basic rates and rates including selected supplementary payments. Indexes are provided (Table 3) for those cities where a majority of trades are covered by current collective agreements.

Characteristics

General

Two rates are indexed: basic rates, indicating the straight time hourly compensation; and basic rates including supplements, such as vacation pay, statutory holiday pay and employers' contribution to pension plans, health and welfare plans, industry promotion and training funds.

Prices used

Wage rates used for these indexes are derived mainly from those published by the various construction labour relations associations across the provinces. Summaries of the signed agreements are provided to Statistics Canada.

Adjustments to prices

None. Rates used are those published in the collective agreements.

Weight base

The weights used for the 2007 based indexes were derived from the 2006 census data. As before, a fixed-basket Laspeyres index formula is used for the 2007 based indexes.

Index formula

Price indexes are base-weighted.

Revisions

Wage rates and indexes are subject to revisions for 30 months.

Historical data

Details on rates (1971 onwards) and indexes (1971 onwards) for individual trades are available monthly on CANSIM. For the 1981=100, 1986=100 and 1992=100 series, composite indexes by major trade group and region are also generated and stored on CANSIM. The databank numbers are available both in the CANSIM directory or on request.

New housing price indexes

(Table 327-0046, 2007=100 Monthly 1981 to present)

Introduction

This index measures changes over time in the contractors' selling prices of new residential houses, where detailed specifications remain the same between two consecutive periods.

For most metropolitan areas, new house price indexes are available from 1981, although figures from 1969 are recorded for selected areas. The 2007=100 series surveys 21 metropolitan areas to establish monthly indexes relating to the contractors' "total selling price". The survey also collects contractors' estimates of the current cost of the land. These estimates are independently indexed to provide the published series for land. The residual (selling price less land), which mainly relates to the current cost of the structure, is also independently indexed and is presented as the house series. The lots are usually serviced by builders except in Montreal and Quebec City where they are occasionally serviced by municipal governments and therefore the servicing costs do not enter into the contractors' selling price.

Characteristics

General

Prices collected for this index relate to the 15th of the month or the nearest business date. Subsequently, the selling prices are adjusted for any changes in quality of the structure and the serviced lot. This index does not measure shelter costs and price changes for existing houses are excluded from these price surveys.

The prices collected from builders and included in the index are market selling prices less value added taxes, such as the Federal Goods and Services Tax (GST) or the Harmonized Sales Tax (HST).

Commencing in January 1991, the New Housing Price Indexes (NHPI) reflect the termination of the Federal Sales Tax (FST) with the introduction of the Goods and Services Tax (GST). Since this index is based on contractors' selling prices for new homes, the GST paid by the final purchasers is excluded from index calculations.

The HST came into effect July 1, 2010, in Ontario and British Columbia. Prior to the introduction of the HST, the provincial sales tax on building materials in Ontario and in British Columbia was embedded in the contractor's selling prices of new houses. With the introduction of the HST in these two provinces, the provincial sales tax is now replaced by the HST, a value added tax which is conceptually excluded from the index.

Prices used

Contractors' mid-month selling prices are collected directly in 21 metropolitan areas through a combination of quarterly visits and telephone contacts in other months.

Adjustments to prices

House prices reported by sample builders are adjusted for changes in quality of both the structures and the serviced lots including intangible variations of location to ensure similarity of specifications.

In cases where the prices reported by sample builders include the value added taxes, they are adjusted to reflect prices that are equivalent to contractors' selling prices excluding those taxes.

Weight base

To prepare a contractors' selling price index for a metropolitan area, price reports from the sample of builders are given equal weights in index calculations. Amongst metropolitan areas, weights are derived from housing completions data.

The same procedure prevails for aggregating the independently derived land and structure series: equal weights within metropolitan areas and proportional weights among metropolitan areas. Weights for metropolitan areas are adjusted annually as described below.

Index formula

A Chain-Laspeyres index formula is used, the weights for which are derived from housing completions for the previous three years valued at prices for the 2007 base year.

Revisions

Indexes as published are final.

Historical data

January 1981 to November 2010 on a 1997 base for 21 metropolitan areas (CANSIM Table 327-0005)

January 1981 to April 2003 on a 1992 base for 21 metropolitan areas. (CANSIM Table 327-0005)

January 1981 to December 1997 on a 1986 base for 21 metropolitan areas. (CANSIM Table 327-0029)

Apartment building construction price indexes

(Table 327-0044, 2002=100, quarterly, 1988 to present)

Introduction

These indexes measure contractors' selling price change of apartment building construction. The indexes relate to both general and trade contractors' work and exclude the cost of land, land assembly, design, development and real estate fees.

Characteristics

General

In conjunction with Canada Mortgage and Housing Corporation, a typical or model apartment building that had been constructed was selected and 1981 pricing was obtained. Sample items of work-in-place to be subsequently priced were taken from this model. All prices are collected directly by Statistics Canada quantity surveyors and include costs of materials, labour, equipment, relevant federal (until 1991) and provincial taxes and contractors' overhead and profit. Value Added Taxes such as the Federal Goods and Services Tax (GST), the Quebec Sales Tax (QST) and the Harmonised Sales Tax (HST) are not included.

Frequency of pricing

Commencing in the first quarter of 1988, prices are collected quarterly for six census metropolitan areas (CMAs) and the Ontario part of the Ottawa-Gatineau CMA. In the period from 1981 to 1987 prices were collected in the first quarter of each year in Montreal, Toronto, Calgary and Vancouver. In 1986 and 1987 price movement was interpolated to establish annual figures.

Prices used

The prices for work-in-place are obtained through phone surveys with sub-contractors and general contractors, who construct apartment buildings, on the basis that they are bidding on a fixed specification and quantity under current market conditions. Prices include contractors' overheads and profit. Prices for certain materials, labour rates, rental of equipment, municipal charges and sales taxes are obtained from a variety of secondary sources; particularly for the mechanical and electrical trades.

Weight base

Weights are derived from a detailed cost analysis of a model apartment building and expressed in 2005 price levels.

Index formula

A fixed weighted formula is used at the CMA level. A Chain- Laspeyres index formula is used for the seven CMA composite levels, for which the weights are derived from building permit data for the previous three years, valued at the price levels of the fourth quarter of the last year.

Revisions

The figures of the most recently published indexes are subject to revision but all other figures are final.

Historical data

There are limited annual data for four CMAs (Montreal, Toronto, Calgary and Vancouver) relating to the first quarter of each year from 1981 to 1987 inclusive.

1988 to 1997 on a 1986 base for seven CMAs (Halifax, Montreal, Ottawa, Toronto, Calgary, Edmonton and Vancouver). Table 327-0033.

1988 to 2001 on a 1997 base for seven CMAs (Halifax, Montreal, Ottawa, Toronto, Calgary, Edmonton and Vancouver). Table 327-0002.

1988 to third quarter 2008 on a 1997 base for seven CMAs (Halifax, Montreal, Ottawa, Toronto, Calgary, Edmonton and Vancouver), Table 327-0040.

1988 to current quarter on a 2002 base for seven CMAs (Halifax, Montreal, Ottawa, Toronto, Calgary, Edmonton and Vancouver), Table 327-0044.

For more information, or to enquire about the concepts, methods or data quality of this release, contact Statistics Canada's National Contact Centre (toll-free 1-800-263-1136; 613-951-8116; infostats@statcan.gc.ca) or the Media Hotline (613-951-4636; mediahotline@statcan.gc.ca).

Non-residential building construction price indexes

(Tables 327-0043 and 327-0044: 2002=100 quarterly 1981 to present)

Introduction

These indexes measure contractors' selling price change of non-residential construction (i.e., commercial, industrial and institutional). The indexes relate to both general and trade contractors' work and exclude the cost of land, design and real estate fees.

Characteristics

General

Sample items of work-in-place to be priced were selected from five different buildings. Three of these buildings (office, warehouse and shopping centre) fall in the category of commercial building, one building (light factory) falls in the category of industrial building and the school falls in the category of institutional building. All prices are collected directly by Statistics Canada quantity surveyors and include costs for materials, labour, equipment, relevant federal (until 1991) and provincial taxes, and contractor's overhead and profit. Value Added Taxes such as the Federal Goods and Services Tax (GST), the Quebec Sales Tax (QST) and the Harmonised Sales Tax (HST) are not included.

Frequency of pricing

Beginning in the first quarter 1988, prices are collected for all 5 models in six census metropolitan areas (CMAs) and the Ontario part of the Ottawa-Gatineau CMA. In the years 1986 and 1987, prices were collected each quarter in Montreal, Toronto and Vancouver for all 5 models. In Halifax and Edmonton, prices were collected semi-annually in the second and fourth quarters and in Ottawa and Calgary, prices were collected semi-annually in the first and third quarters. Price movement was estimated for the intervening quarters.

Prices used

The prices for work-in-place are obtained through phone surveys from sub-contractors and general contractors on the basis that they are bidding on a fixed specification and quantity in the real market and as such, include the current overhead, profit and market conditions. Prices for certain materials, labour rates, rental of equipment, municipal charges and sales taxes are obtained from a variety of secondary sources, particularly for the mechanical and electrical trades.

Weight base

Weights are derived from detailed cost analysis of each structure wherein quantities for each model were expressed in 2005 price levels. The office, light factory, school, warehouse and shopping centre models used were derived from the specifications of structures built in the mid 2000's. Weights used at the CMA, building category and seven CMA composite levels are derived from the Building Permits Survey (Survey ID 2802).

Index formula

A fixed weighted formula is used at the model level. A Chain-Laspeyres index formula is used for aggregations at the building category, the CMA and seven CMA composite levels, for which the weights are derived from building permit data for the previous three years valued at the price levels of the fourth quarter of the last year.

Revisions

The figures of the most recently published indexes are subject to revision but all other figures are final.

Historical data

1972 to 1983 on a 1976 base for four CMAs (Montreal, Ottawa, Toronto and Vancouver) and three models (Office, Factory and School).

1981 to 1989 on a 1981 base for seven CMAs (Montreal, Toronto, Vancouver, Halifax, Ottawa, Calgary and Edmonton) and five models.

1986 to 1997 on a 1986 base for seven CMAs (Montreal, Toronto, Vancouver, Halifax, Ottawa, Calgary, and Edmonton) and five models. Tables 327-0034 and 327-0035.

1981 to 2001 on a 1992 base for seven CMAs (Montreal, Toronto, Vancouver, Halifax, Ottawa, Calgary, and Edmonton) and five models. Tables 327-0001 and 327-0002.

1981 to third quarter 2008 on a 1997 base for seven CMAs (Montreal, Toronto, Vancouver, Halifax, Ottawa, Calgary and Edmonton) and five models. Tables 327-0039 and 327-0040.

1981 to current quarter on a 2002 base for seven CMAs (Montreal, Toronto, Vancouver, Halifax, Ottawa, Calgary and Edmonton) and five models. Tables 327-0043 and 327-0044.

Machinery and equipment price indexes

(Tables 327-0041, 327-0042, 1997=100, quarterly, 1997 to present)

Introduction

The Machinery and Equipment Price Index (MEPI) measures price change for annual gross additions to capital for machinery and equipment by industry of purchase. Price indexes are calculated for industries, major groups of industries, and the total for all industries, and are also calculated for commodities. Price movement is measured on a domestic and an import basis.

- The industry and commodity designations used are those of the Input-Output Tables of the Canadian System of National Accounts. The classification system is the 1997 North American Industry Classification System (NAICS).
- Industry total indexes are presented in table 8-1 ; commodity detail is presented in table 8-2.

Characteristics

Prices used

Prices for domestic machinery and equipment are manufacturers' selling prices free on board (FOB) plant on new orders as of the middle of the month.

Prices for imported equipment are represented by the producer price indexes of the U. S. Bureau of Labor Statistics, and by a few price series from other foreign countries.

Adjustments to price indexes

Domestic and foreign price indexes are adjusted for changes in the effective rate of GST. The effective rate is the net GST tax (the tax levied on a commodity in a particular industry minus the rebated portion) divided by the value of the purchase. For most industries, the effective GST rate approaches zero per cent. Foreign price indexes are also adjusted for changes in exchange rates and custom tariffs where applicable.

Derivation of weights

- The expenditure weights for the 51 industries and 106 commodities represent capital investment for the year 1997, valued at 1997 purchaser prices. They were derived from Input-Output data, which were themselves derived largely from the series of capital expenditure by industry, reported in the annual survey, Capital and Repair Expenditures, Actual, Preliminary Actual and Intentions (survey number 2803) Investment and Capital Stock Division.
- In general, below the commodity level of detail, equal weights were assigned to component indexes.

Index formula

From 1997 forward, the MEPI series are fixed-weighted price indexes of the general type described in the introduction to this catalogue, with both the time and weight base being 1997.

Revisions

The most recent four quarters are subject to revision.

Historical data

Historical 1971=100 quarterly series are publicly available on CANSIM in tables 327-0021, 327-0022 and 327-0023.

Historical 1986=100 quarterly series are publicly available on CANSIM in tables 327-0013, 327-0014 and 327-0016.

Electric utility construction price indexes

(Table 327-0011, 1992=100 annual; Indexes are from 1992 to present)

1. Distribution systems
2. Transmission lines systems

Introduction

These indexes measure price change for construction of two separate models of electric utility plant. Each model was developed using project data from major Canadian electric utilities. Each model portrays an average mix of materials, labour and equipment developed from a variety of projects in a specific base period. This modeling technique provides the framework for the development of simulated plant indexes for construction work and machinery and equipment.

Characteristics

General

Direct costs associated with the construction work and machinery and equipment components are represented by various combinations of price index data: construction work indexes are a combination of indexes for work in place for such items as earthwork and structural steel, and indexes covering major material and labour inputs.

Indirect costs covered include interest foregone during construction, and design and administration costs, whose movements are indexed from salary survey data. (An aggregation excluding interest foregone is also available.)

Prices used

Machinery and equipment

For domestic equipment, prices used for machinery and equipment are manufacturers' selling prices. For imported equipment, foreign price indexes are used.

Wage rates

Basic union wage rates are used for construction trades. Employment, earnings and hours survey (SEPH) data on average weekly earnings (including overtime) for salaried employees are used for engineers, technicians, clerks and draftsmen.

Interest foregone during construction

ScotiaMcLeod provincial bond yield average index is used.

Adjustments to prices

Price indexes are not adjusted for the Goods and Services Tax. Price indexes of imported equipment are adjusted for exchange rates and where applicable tariff rates.

Weight base

Indexes 1 and 2

Gross capital additions made by major utilities in the several years prior to 1992 were converted to base year dollar values. This data was then utilized to produce a weighted average expenditure for the classes of construction specified.

Index formula

A fixed-weighted price index formula of the type described in the Introduction of this catalogue was used.

Revisions

Publication year estimates, if shown, represent the first half of the calendar year, January to June. Publication year and previous year estimates are preliminary.

Consulting engineering services price indexes

(Table 327-0007, 1997=100, annually since 1989)

Introduction

The Consulting Engineering Services Price Indexes (CEPI) measure changes in the prices of services provided by consulting engineers. These services encompass advisory and design work as well as, construction or project management. They are provided for many types of projects (fields of specialization), and to both Canadian and foreign clients. Price indexes are published for ten fields of specialization as well as for regional, domestic, and foreign markets.

Characteristics

General

These indexes are produced from annual wage and financial data collected from a judgement sample of consulting engineering firms in Canada (North American Industrial Classification System 54133). The total price indexes (column A) are calculated as the product of wage rate and realized net multiplier indexes (mark-up). The composition of the total price index reflects how firms structure their service contracts. The wage rate and realized net multiplier indexes are published separately in Columns B and C. These indexes provide information on the source of change in the prices of consulting engineering services over time.

Pricing information used

Changes in wage rates

The wage rate indexes are produced from data on the average of annual percentage changes in salaries and wage rates paid to those whose time is charged directly to consulting engineering projects. These indexes measure changes over time in the value of the wage component of contracts for engineering services.

Realized net multiplier

Realized net multipliers are calculated as the ratio of operating revenue from consulting engineering projects at fiscal year-end to project-related expenses. The multiplier indexes measure changes in the profitability of consulting engineering activities in each market and field of specialization.

Derivation of weights

Weights are derived from fee income data from the Annual Survey of Engineering Services that is conducted by Services Industries Division. The total fee income for each field of specialization is prorated by region using the provincial distribution of new construction expenditures from the Survey on Capital and Repair Expenditures that is conducted by Investment and Capital Stock Division. Index weights are revised every two years so that price indexes reflect changes in the relative importance of consulting engineering activity in each field of specialization and region over time.

Index formula

At the most detailed level, the indexes are calculated as chained, unweighted geometric averages of the data received from respondents. With the exception of indexes for the industrial fields of specialization, a Chain-Laspeyres index formula is used to calculate indexes at the total region, Canada and all-market levels. The index for each industrial field of specialization is calculated at the Canada level only using a geometric mean formula. Composite indexes for industrial services by region differ because the mix of industrial projects varies from one regional market to another.

Revisions

The most recent two years of published indexes are subject to revision.

For more information, or to enquire about the concepts, methods or data quality of this release, contact Statistics Canada's National Contact Centre (toll-free 1-800-263-1136; 613-951-8116; infostats@statcan.gc.ca) or the Media Hotline (613-951-4636; mediahotline@statcan.gc.ca).

Appendix I

Rebasing factors for New housing

To convert a 1997-based index to a 2007 base, just look for the appropriate rebasing factor in the following tables and multiply each element of the series by that factor. Expressed as a formula, the calculation is:

Figure 1

To convert a 1997-based index to a 2007 base

$$P_{t/07} = f \times P_{t/97}$$

Conversely, to convert the 2007-based index to a 1997 base, just look for the appropriate rebasing factor in the following tables and divide each element of the series by that factor. Expressed as a formula, the calculation is:

Figure 2

To convert the 2007-based index to a 1997 base

$$P_{t/97} = P_{t/07} / f$$

Appendix II

Rebasing factors for Apartment and Non-residential Building Construction Price Indexes

To convert a 1997-based index to a 2002 base, just look for the appropriate rebasing factor in the following tables and multiply each element of the series by that factor. Expressed as a formula, the calculation is:

Figure 3

To convert a 1997-based index to a 2002 base

$$P_{t/02} = f \times P_{t/97}$$

Conversely, to convert the 2002-based index to a 1997 base, just look for the appropriate rebasing factor in the following tables and divide each element of the series by that factor. Expressed as a formula, the calculation is:

Figure 4

To convert the 2002-based index to a 1997 base

$$P_{t/97} = P_{t/02} / f$$
