## How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website at [www.statcan.gc.ca](http://www.statcan.gc.ca), e-mail us at [infostats@statcan.gc.ca](mailto:infostats@statcan.gc.ca), or telephone us, Monday to Friday from 8:30 a.m. to 4:30 p.m., at the following numbers:

### Statistics Canada's National Contact Centre

Toll-free telephone (Canada and the United States):

Inquiries line	1-800-263-1136
National telecommunications device for the hearing impaired	1-800-363-7629
Fax line	1-877-287-4369

Local or international calls:

Inquiries line	1-613-951-8116
Fax line	1-613-951-0581

### Depository Services Program

Inquiries line	1-800-635-7943
Fax line	1-800-565-7757

## To access this product

This product, Catalogue no. 62-011-X, is available free in electronic format. To obtain a single issue, visit our website at [www.statcan.gc.ca](http://www.statcan.gc.ca) and browse by "Key resource" > "Publications."

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed *standards of service* that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on [www.statcan.gc.ca](http://www.statcan.gc.ca) under "About us" > "The agency" > "Providing services to Canadians."

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- P preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- \* significantly different from reference category ( $p < 0.05$ )

## Note on CANSIM

Data that appears in the **Industry Price Indexes** (catalogue no. 62-011-X) are also available electronically in our CANSIM (Canadian Socio-Economic Information Management System) database through the Internet tables 329-0056 to 329-0068 and 330-0007. In general, *CANSIM* provides a longer historical series. For further information on *CANSIM* call 1-800-263-1136.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

## Acknowledgements

I Use of Link factors for IPPI and RMPI	169
---	-----

# Highlights

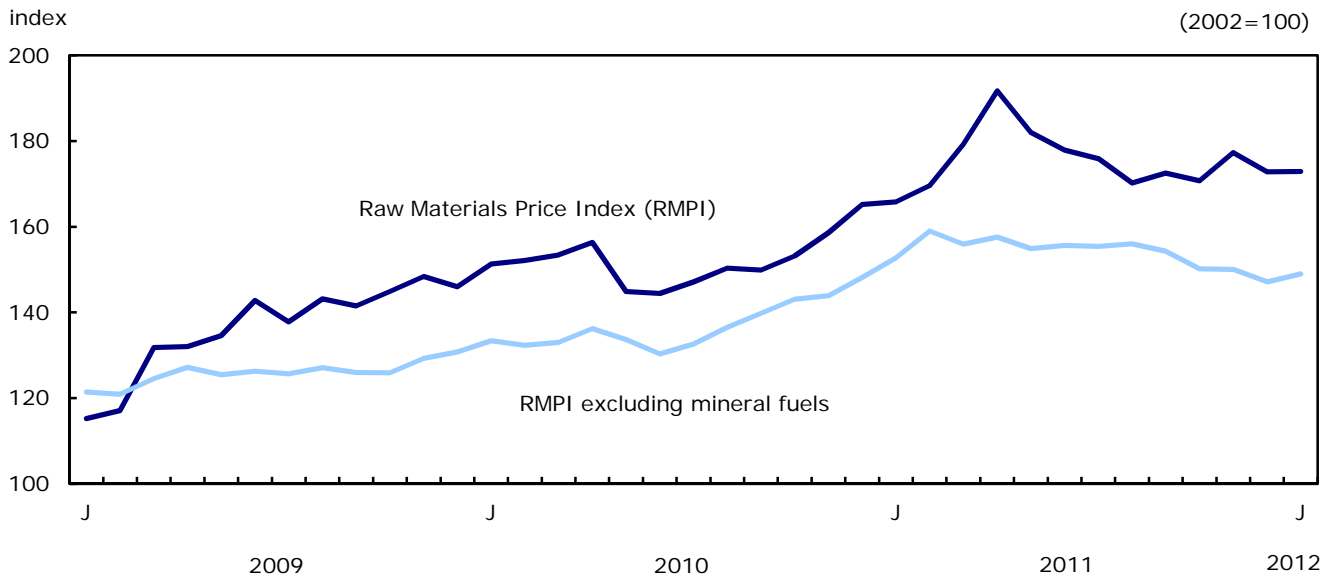

---

- The Industrial Product Price Index (IPPI) increased 0.3% in January after posting a 0.9% decline in December.
- The advance of the index was largely because of higher prices for petroleum and coal products (+2.1%) and primary metal products (+1.9%).
- Primary metal prices (+1.9%) rose for the first time since August 2011, pushed higher by copper and copper alloy products (+6.8%), aluminum products (+2.8%) and nickel products (+8.1%).
- The IPPI increased 2.3% in January compared with the same month a year earlier, pushed upward mainly by higher prices for petroleum and coal products (+11.8%).
- The Raw Materials Price Index (RMPI) rose 0.1% in January, following a 2.5% decrease in December.
- The advance of the RMPI was mainly the result of higher prices for non-ferrous metals (+3.6%) and wood (+2.4%).
- Compared with January 2011, the RMPI was up 4.3%, continuing the slowdown that started in May.
- The main contributors to the year-over-year advance of the RMPI in January were higher prices for mineral fuels (+12.2%) and animals and animal products (+11.6%).

## Analysis

---

Compared with December, the Industrial Product Price Index (IPPI) rose 0.3% in January, led by petroleum products and primary metals. The Raw Materials Price Index (RMPI) edged up 0.1%, primarily because of higher prices for non-ferrous metals and wood.

### Industrial Product Price Index, monthly change

The IPPI increased in January, following a 0.9% decline in December. The advance of the index was largely because of higher prices for petroleum and coal products (+2.1%) and primary metal products (+1.9%).

The increase in petroleum and coal product prices was mostly the result of gasoline (+3.5%). The upward movement of gasoline prices in January was a turnaround, as prices had fallen in the previous five months.

Primary metal prices (+1.9%) rose for the first time since August 2011, pushed higher by copper and copper alloy products (+6.8%), aluminum products (+2.8%) and nickel products (+8.1%). The increase in copper and aluminum prices was largely because of reduced supply, while nickel prices were driven by stronger demand for steel.

Aside from these increases, a few product groups showed some downward movement in January, particularly motor vehicles and other transportation equipment (-0.5%). Motor vehicle prices were affected by the 1.0% appreciation of the Canadian dollar relative to the US dollar.

Some Canadian producers who export their products are generally paid on the basis of prices set in US dollars. Consequently, the strength of the Canadian dollar in relation to the US dollar in January had the effect of reducing the corresponding prices in Canadian dollars. Without the impact of the exchange rate, the IPPI would have risen 0.6% instead of 0.3%.

The IPPI excluding petroleum and coal prices was unchanged in January, following a 0.4% decline in December.

### 12-month change in the Industrial Product Price Index

The IPPI increased 2.3% in January compared with the same month a year earlier, continuing the slowdown in the growth of prices for a fourth consecutive month. Of the 21 major commodity aggregations, 17 were up in January.

Compared with January 2011, the IPPI was pushed upward mainly by higher prices for petroleum and coal products (+11.8%). More modest contributions were made by chemical products (+3.9%), motor vehicles and other transportation equipment (+1.8%), fruit, vegetables and feeds (+2.5%) and meat, fish and dairy products (+2.7%).

Year over year, the growth of petroleum and coal products continued to slow from the most recent high in July 2011.

The year-over-year increase in chemical products was largely attributable to industrial chemical products (+3.1%) and fertilizers (+14.1%). In the industrial chemical products group, higher prices were observed for inorganic chemical products (+5.8%), organic chemical products (+2.7%) and synthetic resins (+2.4%).

Compared with January 2011, the IPPI excluding petroleum and coal rose 1.0%, a slightly slower pace than in preceding months.

The advance of the IPPI relative to the same month a year earlier was moderated primarily by a decrease in primary metal products (-4.2%). This third consecutive decline was mainly the result of lower prices for copper and copper alloy products (-12.8%), nickel products (-21.2%) and aluminum products (-5.8%).

In January, the 1.9% year-over-year decline in the value of the Canadian dollar relative to the US dollar contributed to the increase in the IPPI. Without the impact of the exchange rate, the IPPI would have risen 1.9% instead of 2.3%.

### **Raw Materials Price Index, monthly change**

In January, the RMPI rose 0.1%, following a 2.5% decrease in December. The advance was mainly the result of higher prices for non-ferrous metals (+3.6%) and wood (+2.4%).

All the major non-ferrous metal groups except precious metals and radioactive concentrates were up, including copper concentrates (+9.9%) and non-ferrous metal scrap (+3.7%).

The increase in wood products was largely the result of an increase in softwood logs and bolts (+3.0%). A strengthening in demand for wood, notably because there was favourable weather for construction, contributed to the price rise.

The upward movement in the RMPI was moderated by lower prices for mineral fuels (-1.1%). Among mineral fuels, crude oil declined 1.1%, its second consecutive monthly decrease.

The RMPI excluding mineral fuels posted a 1.3% increase in January, its first advance since August 2011.

### **12-month change in the Raw Materials Price Index**

Compared with January 2011, the RMPI was up 4.3%, continuing the slowdown that started in May. The main contributors to the year-over-year advance of the RMPI in January were higher prices for mineral fuels (+12.2%) and animals and animal products (+11.6%). The growth of the RMPI was moderated by non-ferrous metals (-12.3%), which experienced a fourth consecutive decline.

The year-over-year increase in prices for animals and animal products was largely due to slaughter cattle (+15.7%) and slaughter hogs (+18.2%). The price rise resulted primarily from a reduction in herd size and stronger demand.

Year over year, the RMPI without mineral fuels fell 2.4% in January, its second consecutive decline.

#### **Note to readers**

All data in this release are seasonally unadjusted and usually subject to revision for a period of six months (e.g., when the July index is released, the index for the previous January becomes final).

The **Industrial Product Price Index** (IPPI) reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including transportation, wholesale and retail costs.

Canadian producers export many goods. They often indicate their prices in foreign currencies, especially in US dollars, which are then converted into Canadian dollars. In particular, this is the case for motor vehicles, pulp, paper and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI. But the conversion into Canadian dollars only reflects how respondents provide their prices. Moreover, this is not a measure that takes into account the full effect of exchange rates, since that is a more difficult analytical task.

The conversion of prices received in US dollars is based on the average monthly exchange rate (noon spot rate) established by the Bank of Canada, and it is available on CANSIM in table 176-0064 (series v37426). Monthly and annual variations in the exchange rate, as described in the text, are calculated according to the indirect quotation of the exchange rate (for example, CAN\$1 = US\$X).

The **Raw Materials Price Index** (RMPI) reflects the prices paid by Canadian manufacturers for key raw materials. Many of those prices are set on the world market. However, as few prices are denominated in foreign currencies, their conversion into Canadian dollars has only a minor effect on the calculation of the RMPI.

**Note(s):** Indexes for the most recent six months shown are subject to revision. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match. The numeric code preceding the CANSIM series number is the 2002 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision. Indexes for the most recent six months shown are subject to revision. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match. The numeric code preceding the CANSIM series number is the 2002 North American Industry Classification System (NAICS) code.

## Industrial Product Price Indexes (2002=100)

---

The Industrial Product Price Indexes (IPPI) measures price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 944 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 2002 Input-Output tables. Weights used to aggregate commodity indexes are taken from the output or “Make” matrix of the Input-Output tables of the Canadian System of National Accounts (SNA) which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (catalogue no. 11-001-X) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in tables 329-0056 to 329-0068 or by request.

Each release of index numbers is subject to revision for six months, (for example, when the July index is released, the index for the preceding January becomes final). Exceptions to this rule are announced.

### Price surveys

About 6,000 price quotes are collected monthly from about 1,700 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are “must take” respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 3 to 15 price quotes. An index may be derived from as few as 3 quotes or as many as 30 quotes.

Estimated percentage shares (by weight in the IPPI) of the collection methods used in the construction of the IPPI: Direct Mail survey (80%) Telephone Interviews (10%) Extraction of data from other sources (10%).

### Weight base

The composite indexes are weighted averages of the elemental indexes. For the IPPI, commodity and industry weights are taken from the output matrix of the 2002 Input-Output tables produced by the Industry Accounts Division of the Canadian System of National Accounts (SNA). These tables are derived from shipment values reported for the 2002 Annual Survey of Manufactures (ASM) and edited to conform to the industry classification (i.e. NAICS). However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns. The entire weighting scheme for the IPPI is generally revised every 5 years. The current time base and weight base is 2002=100.

## Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w^i$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

## Historical data

The historical series consist of all data for the months prior to January 2002. They were obtained by linking together indexes from the 2002-based IPPI series and the corresponding 1997-based IPPI series. These historical series were obtained by rebasing the 1997-based IPPI series using, as the rebasing factor, the ratio of 100 to the annual average index of 2002.

Historical series on the 2002 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 2002 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. A set of CANSIM vector *concordance tables* between both sets of IPPI series are available to the public.

## Raw Materials Price Indexes (2002=100)

---

The Raw Materials Price Indexes (RMPI) measures price changes for raw materials purchased by industries in Canada for further processing. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product. For example, wheat is considered as a raw material, but wheat flour is not; iron ore is but not pig iron; coal is but not electricity. Approximately 80 commodities are priced in the index, grouped into seven major components. For the RMPI, commodity weights are taken from the input matrix of the 2002 Input-Output tables of the Canadian System of National Accounts (SNA).

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

The index and the major group indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (catalogue no. 11-001-X) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in tables 330-0007 or by request.

Each release of index numbers is subject to revision for six months, (for example, when the July index is released, the index for the preceding January becomes final). Exceptions to this rule are announced.

### Price surveys

Data are collected directly from survey respondents, extracted from administrative files and derived from other Statistics Canada surveys and/or other sources. As a purchasers' price index, prices include all charges purchasers incur to bring a commodity to the establishment gate. They include transportation charges, net taxes paid, custom duties, as well as subsidies, if applicable.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are "must take" respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 3 to 15 price quotes. An index may be derived from as few as 3 quotes or as many as 30 quotes.

In the RMPI, approximately 34% of the data are collected by direct mail survey, 60% of the data from administrative sources and the remaining 6% from imputation, usually from a similar commodity at the next stage of processing.

### Weight base

The composite indexes are weighted averages of the elemental indexes. For the RMPI, commodity weights are taken from the input matrix of the 2002 Input-Output tables produced by the Industry Accounts Division of the Canadian System of National Accounts (SNA). These tables provide values at purchasers' prices of commodities purchased as intermediate inputs. Within individual commodity indexes, the prices are weighted according to their market share. If data are not available, the prices are equally weighted. Each December, product weights within a commodity index can be changed in order to reflect important changes in production patterns. The entire weighting scheme for the RMPI is generally revised every 5 years. The current time base and weight base is 2002=100.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(\text{agg})} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(\text{agg})}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

## Historical data

The historical series consist of all data for the months prior to January 2002. They were obtained by linking together indexes from the 2002-based RMPI series and the corresponding 1997-based RMPI series. These historical series were obtained by rebasing the 1997-based RMPI series using, as the rebasing factor, the ratio of 100 to the annual average index of 2002. A set of CANSIM vector *concordance tables* between both sets of RMPI series are available to the public.

## Electric Power Selling Price Indexes, Non-residential (2009=100)

---

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 2009 as a time reference base and the weights used are 2009 company revenues from sales of electricity, as collected by Producer Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 2009 =100. The indexes are available on CANSIM in table 329-0073. Indexes for the current year and the previous year are subject to revision.

# Appendix I

---

## Use of Link factors for IPPI and RMPI

To convert a 2002-based index to a 1997 base, just look for the appropriate link factor in the following appendix tables and multiply the index of the 2002 based series by that factor. Expressed as a formula, the calculation is:

$$P_{/02} \times f = P_{/97}$$

where  $P_{/02}$  is a 2002-based index,  $P_{/97}$  is a 1997-based index and  $f$  is the link factor.

Conversely, to convert the 1997-based index to a 2002 base, just look for the appropriate link factor in the following appendix tables and divide the index of the 1997 based series by that factor. Expressed as a formula, the calculation is:

$$P_{/97} \div f = P_{/02}$$

Link factors are available upon request. For more information, or to enquire about the concepts, methods or data quality of this release, contact Statistics Canada's National Contact Centre (toll-free 1-800-263-1136; 613-951-8116; [infostats@statcan.gc.ca](mailto:infostats@statcan.gc.ca)) or the Media Hotline (613-951-4636), Communications Division.
