Canadian Data Report of Fisheries and Aquatic Sciences No. 852

## Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans. namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in Aquatic Sciences and Fisheries Abstracts and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161 .

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

## Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministẻre des Pêches et des Océans, c’est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraít au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue Résumés des sciences aquatiques et halieutiques, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pèches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

#### Abstract

O'Neil, S.F., D.A. Stewart, K. Newbould and R. Pickard. 1991. 1988 Atlantic salmon sport catch statistics, Maritime Provinces. Can. Data Rep. Fish. Aquat. Sci. No. $852 . v+79 p$.

The Maritime Provinces Atlantic salmon sport catch in 1988 was 54,277 fish - 39,458 grilse retained, 1,146 grilse released, and 13,673 large salmon ( $\geq 63 \mathrm{~cm}$ fork length) released. Field staff estimated that 36 New Brunswick rivers produced 33,223 bright fish ( 26,345 grilse retained) and 4,434 kelts. Nova Scotia anglers reported fishing on 92 rivers and retained or released a total of 15,977 large salmon and grilse. A total of 643 grilse were angled on Prince Edward Island. Anglers spent 91,300 rod-days on New Brunswick rivers and 78,500 rod-days on Nova Scotia rivers during the 1988 season. Catch per unit effort (fish per rod-day) for the Maritimes was 0.310 .

Keywords: Atlantic salmon, sport catch, rod-days, kelts, grilse, large salmon, New Brunswick, Nova Scotia, Maritimes.

## RÉSUMÉ

O'Neil, S.F., D.A. Stewart, K. Newbould and R. Pickard. 1991. 1988 Atlantic salmon sport catch statistics, Maritime Provinces. Can. Data Rep. Fish. Aquat. Sci. No. 852.v +79 p .

Les prises sportives de saumon de l'Atlantique effectuées dans les provinces Maritimes en 1988 s'établissent à 54277 saumons, soit 39458 madeleineaux capturés et gardés, 1146 madeleineaux remis à l'eau et 13673 gros saumons (plus de 63 cm de longueur à la fourche) remis à l'eau. Les employés des régions concernées ont estimé à 33223 saumons de montée ( 26345 madeleineaux gardés) et 4434 charognard́s les prises obtenues dans 36 rivières du Nouveau-Brunswick. En Nouvelle-Écosse, les prises sportives de saumon, soit gardées soit remises à l'eau, obtenues dans 92 rivières s'élèvent à 15977 gros saumons et madeleineaux. A lle-du-Prince-Édward, les prises se sont limitées à 643 madeleineaux. En 1988, les pêcheurs ont consacré à la pêche 91300 journées au Nouveau-Brunswick et 78500 en Nouvelle-Écosse. La prise par effort unitaire (poissons par journée de pêche) pour les Maritimes a été de 0,310 .

## INTRODUCTION

Atlantic salmon sport catch and effort data for 1988 has been summarized in this report for the Maritime Provinces.

The data on specific rivers and geographic groupings are presented in two sections, (1) New Brunswick and Prince Edward Island, and (2) Nova Scotia, based on the source of the data. The first section includes catch and effort data on rivers in New Brunswick and Prince Edward Island. The numbers were provided by Fisheries and Oceans officers and New Brunswick Department of Natural Resources and Energy biologists and wardens. Generally, the data is collected through observation and word-of-mouth. The second section includes recreational catch and effort statistics for Nova Scotia rivers. The figures are based on information provided on license stubs by almost 5,900 anglers.

The different sources for the catch and effort data resulted in the separation of the report into two sections in order to emphasize the relative integrity of the information. The New Brunswick catch and effort figures should be considered representative of actual figures but with little scientific validity for the method of collection. The Nova Scotia data, on the other hand, is summarized according to standard sampling theory and practise. As a result, the information is felt to be a good reflection of the actual harvest and release of fish and angler effort on the numerous Nova Scotia rivers.

## COMMENT ON THE FISHERY

## MARITIME PROVINCES

The 1988 Canadian Atlantic salmon sport catch of approximately 106,600 large salmon and grilse was well above the 1987 catch of 79,500 fish and similar to the 1986 report of 107,600 large salmon and grilse (Table 1). In 1984, a change in the Atlantic salmon management plan directed that salmon anglers in the Maritime Provinces release large salmon (salmon $\geq 63 \mathrm{~cm}$.). Recent (i.e., since 1983) catch figures do not include estimates of the numbers of fish released. In spite of the change in reporting methods, the 1988 catch compares favorably with the pre-1984 long-term (1965-83) mean catch of 98,100 fish.

The Maritime Provinces sport catch exhibits the same trend as found in all of Canada with respect to Atlantic salmon angling. The total 1988 catch of 39,400 grilse is a considerable improvement ( $23 \%$ ) over the 1983-87 mean catch of 32,100 fish (Table 2), and $7 \%$ higher than the long term (1970-87) average catch of 37,100 fish. The catch in each of the three Maritime Provinces in 1988 was greater than both the short and long-term means and in two provinces, New Brunswick and Prince Edward Island, considerably higher than in 1987.

The kelt or black salmon fishery in New Brunswick took 4,400 fish, roughly $14 \%$ of the provincial catch in 1988 (Table 2). Although the kelt fishery is relatively insignificant overall, it has shown recent improvement. Catches of kelts have risen steadily since 1986. Comparison of black salmon harvests during the past few years with the long-standing (1970-87)
mean indicates that the historical fishery generally yielded far more kelts (Table 2).

The Maritime Provinces catch by "year of run" for 1988 (bright catch in 1987 is added to the kelt catch in 1988) of 33,500 fish was down considerably from the 1986 "year of run" catch of 50,100 fish (Table 3). The drop is more a reflection of the poor bright fish catch in 1987, which was caused in part by low water and high summer temperatures (O'Neil et.al. 1989).

Anglers fished the waters of the various Attantic salmon rivers in record numbers in Nova Scotia and Prince Edward island in 1988 (Table 4). Total effort in rod-days for the Maritime Provinces exceeded both long and short-term means. The estimate of 175,000 rod-days is the third highest since 1970 (Table 4). Mean monthly discharge for the summer months from a select group of Maritime rivers was much greater in 1988 than in 1987 (Fig. 1). The extreme low flows in 1987 which influenced the catchability of fish did not negatively affect catch rates in the same manner in 1988 (O'Neil et al. 1989).

Rivers which flow into the Gulf of St. Lawrence from the three Maritime Provinces collectively yielded 28,900 grilse in 1988 to the recreational salmon fishery (Table 5). This figure represents $71 \%$ of the overall catch in the three provinces, and is the second highest Gulf Region catch since 1977. Scotia-Fundy Region rivers provided 10,600 grilse to anglers, a number slightly higher than the 1970-87 average catch of 9,800 fish.

As mentioned above, the 1988 figures do not include released large salmon whereas the 1970-83 figures do. Interpreting the data strictly on the basis of annual totals may be misleading because of the change in reporting schemes. In addition, the closure of the commercial fishery in the Maritime Provinces after the 1984 season had an impact on the yield to the recreational fishery. Both factors should be considered when comparing the performance of one year against another.

## NEW BRUNSWICK AND PRINCE EDWARD ISLAND

Recent Atlantic salmon catches in New Brunswick have fluctuated from a low of 16,260 large salmon and grilse in 1983 to a high of 40,300 grilse in 1986 (Table 2). The 1988 catch of 30,780 grilse is down considerably from the 1986 high but is in keeping with the long term (1970-87) mean of 30,340 large salmon and grilse. The 1988 catch represents a $31 \%$ improvement over the 1987 grilse harvest of 23,500 fish. The three principal drainages in the province, the Restigouche, Miramichi, and Saint John rivers, accounted for $84 \%$ of the New Brunswick bright grilse catch. Complete estimates of the number of large salmon released were not available.

New Brunswick large salmon sport catch estimates were difficult to obtain because large salmon were released. Nevertheless, fish counting facility data can be used to indicate trends in grilse and large salmon run size. Large salmon returns to the Saint John fish counting facility at Mactaquac were down for the fourth consecutive year (Tables
$6 \& 7$ ). The reduction in numbers could not be explained as increased commercial exploitation in distant fisheries or an increase in the proportion of fish which had matured the previous year as grilse (Marshall 1989). The return of 292 multi-sea-year salmon to the St. Croix counting facility in 1988 was up considerably from the 1987 count of 177 fish and similar to returns in 1985 and 1986. Grilse counts at the same locations show somewhat different trends. At Mactaquac, returns of grilse have improved annually since 1986, but at St. Croix the return of 102 grilse in 1988 was down from the 195 counted in 1987 (Table 6).

Anglers collectively fared much better on New Brunswick salmon streams in 1988 than they have in any year since 1977. On average, anglers took slightly less than two rod-days to catch a fishin 1988 as compared with nearly three rod-days in 1987 (Table 4). The improved success rate may have had a positive impact on license sales, but did not alter angler effort appreciably relative to the previous few years. Sportishers expended 91,300 rod-days in 1988, which was almost equivalent to the 1983-87 mean effort estimate of 89,300 rod-days (Table 4).

The relative contribution of large salmon and grilse to a spawning stock is based upon the number of fish from each age group, the proportion which are female and fecundity (number of eggs per unit body weight). Grilse are predominately male in most Maritime Province salmon stocks. A female grilse, ranging in weight from $1.4-2.5 \mathrm{~kg}$ may contribute $2,400-4,400$ eggs. Large salmon from most Maritime Provinces, on the other hand, are predominately female. Since large or multi-sea-winter salmon spend two or more winters at sea before reproducing, they tend to be larger than grilse by a factor of two or more. Consequently, a single female multi-sea-winter salmon may contribute twice as many eggs (or more) than a grilse. Atlantic salmon management principles have concentrated on protecting the large fish in recent years; hence the mandatory release of large salmon by anglers and the restrictions in the commercial salmon fishery.

In spite of the change in the regulations respecting the recreational salmon fishery, sport fishers are pursuing the Atlantic salmon in steadily increasing numbers (Table 8). Nearly 22,000 anglers purchased licenses in New Brunswick in 1988 as compared with only 16,119 in 1984, the year that the mandatory release of large salmon became a law.

Prince Edward Island attracted more salmon sport fishermen in 1988 than in any year previously. The 719 licensed anglers (Table 8) spent 5,200 rod-days (Table 4) on the provinces two principal salmon rivers and collectively harvested over 640 grilse (Table 2). The striking aspect to this banner year in Prince Edward Island is the magnitude of the increase. The grilse harvest was up 35\%, angler effort, $119 \%$ and license sales $56 \%$.

## NOVA SCOTIA

Approximately 8,000 grilse were harvested in Nova Scotia in 1988, a number which exceeds both the long (197087) and short-term (1983-87) mean catch by $21 \%$ and $3 \%$ respectively (Table 2). It should be noted, however, that catch data prior to 1983 was supplied by fishery officers, and since
that time has been based on information supplied by anglers via license stubs. Comparison of the data collected by the two methods may not provide a true reflection of the change in catch, as the license stub data estimates the catch to be greater by up to 1.5 times that estimated by fishery officers.

Nova Scotia fishers released 1,150 grilse and 6,800 large salmon in 1988, in addition to the 8,000 grilse harvested (Table 19). The collective catch of nearly 16,000 fish is similar to the total catch of 15,850 angled in 1987 (O'Neil et al. 1989).

Salmon returns to salmon monitoring facilities at Morgan Falls on the LaHave River, the falls on the Liscomb River and at Tusket River falls do not represent a consistent trend (Table 6). Large salmon counts have declined steadily on the LaHave and Liscomb over the past three years but have fluctuated on the Tusket River. Grilse counts have increased steadily over at least the past few years on the LaHave, but declined sharply in 1988, relative to the previous two years on the Liscomb River. Attempts to use the counting facilities as indicators of river returns in similar physiographic areas have not been particularly successful. The reason, at least in part, is due to the fact that the counting facilities are located on enhanced rivers which have both a hatchery and wild component. Performance of those two components is known to differ and thus have an impact, whether positive or negative, on overall stock performance.

Angling effort in Nova Scotia has generally followed the catch. Anglers tend to respond quickly to improved catch and similarly, put their fly rods away when few fish are available. The 1988 fishing year was no exception. Sportfishers in Nova Scotia reported spending 78,500 rod-days on the rivers and streams in the province in 1988, up from the 69,300 rod-days reported in 1987 (Table 4). The effort estimate for 1988 exceeds any previous estimate since 1956 when effort was reported to be 97,700 rod-days (Smith 1981). Angling success in Nova Scotia, as measured by catch per rod-day (CPUE), was 0.203 in 1988, which means that anglers took almost five rod-days to catch a fish (Table 4). A rod-day is defined as any portion of a day spent fishing on a particular river by an angler. The success rate for 1988 is well above the long-term (1970-87) mean CPUE of 0.163 and slightly better than the short-term mean CPUE of 0.198 . Nevertheless, sportfishers generally had poorer luck in 1988 than in the previous three years (Table 4).

Although angler success was not particularly high relative to recent years, Atlantic salmon license sales Increased again in 1988 to 8,027 , for the fourth consecutive year (Table 8). Non-residents fished for Atlantic salmon in unprecedented numbers in 1988. Almost 1,300 non-residents visited Nova Scotia to pursue salmon, roughly $16 \%$ of licensed salmon anglers. Previous highs occurred in 1984, 1985 and 1987, when $13 \%$ of licensed salmon anglers were from out of province. A substantial portion of non-residents fishing salmon in Nova Scotia visit the Margaree River (65\%). Of particular interest is the lack of diversity in rivers fished by nonresidents. Resident anglers collectively fished on 91 rivers throughout the province. Non-residents visited only 51 rivers and $85 \%$ of non-resident effort occurred on only six rivers, the Margaree, Medway, Middle Victoria Co., Stewiacke, LaHave

## and Saint Mary's.

Angling statistics for Nova Scotia rivers are based on the 6,101 license stubs received from the 8,027 anglers licensed to fish for Atlantic salmon. Sportishers who failed to return their license stub were mailed a reminder letter. The 1988 overall response rate of $76 \%$ is consistent with rates observed annually since 1983 after a single reminder letter.

The detailed data are summarized on several tables in the Nova Scotia portion of this report, either by individual river (Tables 19, 23 and 27), by Fisheries and Oceans statistical district (Tables 20 and 24), by county (Tables 21 and 25) or by salmon fishing area (Tables 22 and 26). Tables 19 through 22 provide catch information separated into retained and released components. Tables 23 through 26 summarize total catch (retained plus released), effort, and eatch per unit effort. Table 27 is a monthly breakdown of retained catch by river.

The Cheticamp River is managed under the National Parks Act and Regulations, which do not require that anglers hold a provincial fishing license. Catch and effort data are recorded by Cape Breton Highlands National Park wardens and have been provided by them for this report (Table 28).

## ACKNOWLEDGEMENTS

The Nova Scotia salmon angling license stub program is managed jointly by the Department of Fisheries and Oceans and the Nova Scotia Department of Lands and Forests. In particular, the contribution of the licensing unit at Lands and Forests has been invaluable in the efficient running of this system.

Appreciation is also expressed to the many anglers who completed and returned their license stubs.

The provision of data on many of the New Brunswick rivers by the New Brunswick Department of Natural Resources and Energy wardens and biologists is greatly appreciated. Fisheries and Oceans field officers in some locations have contributed catch and effort statistics which we gratefully acknowledge. The Nepisiguit River data was made available through the generous efforts of B. Baker of the Nepisiguit River Association.
R. Dunfield reviewed the manuscript.

[^0]| Bartholomew River |  | Closed to fishing in those waters from its confluence with the Southwest Miramichi River including its branches but not its tributaries from June 20 to December 31, 1988. |
| :---: | :---: | :---: |
| Hammond River |  | Closed to fishing in those waters of Paimer Brook from its confluence with the Hammond River upstream 200 m to a point as marked by a fishery officer from July 30 to December 31, 1988. |
| Midgell River |  | Catch and release "only" season from October 1 to October 31, 1988. |
| Morell River |  | Catch and release "only" season from October 1 to October 31, 1988. |
| Nashwaak River | (1) | Closed to fishing in those waters in York County locally known as Ross Pool, and extending from a point located 150 m downstream of the mouth of Porters Brook to a point located 30 m upstream of the mouth of Porters Brook from June 1 to December 31, 1988. |
|  | (2) | Closed to fishing in those waters locally known as Big Basin Pool lying between a point at Grid Reference 49342893 and a point at Grid Reference 49522899 as shown on map Coldstream $21 \mathrm{~J} / 6$ of the National Topographic Series, scale 1:50,000, from June 15 to December 31, 1988. |
| Nepisiguit River | (1) | Closed to fishing in those waters from the head of Pabineau Falls pool downstream for a distance of 45 m to a point as marked by a fishery officer from May 13 to October $8,1988$. |
|  | (2) | Closed to fishing in those waters from 100 m above to 100 m below the Nepisiguit trap counting fence from May 25 to December 31, 1988. |
| Northwest Miramichi River | (1) | Closed to fishing in those waters from 100 m above to 100 m below the Miner's Bridge from June 1 to December 31, 1988. |
|  | (2) | Closed to fishing except by artificial fly in those waters from the Forks to the upper line of lot number 1 granted to William Crawford and the South Branch of the Northwest Miramichi River from its confluence with the Northwest Miramichi River to its source, but not including any tributaries, from June 3 to December 31, 1988. |
| Point Wolfe River |  | Closed to salmon angling in 1988. |
| Saint John River |  | Closed to fishing in those waters in Carleton County lying between the highway bridge at Grafton and the railroad bridge at Upper Woodstock from June 15 to December 31, 1988. |
| Southwest Miramichi River | (1) | Closed to fishing in those waters from 100 m above to 100 m below the Quarryville bridge from July 21 to December 31, 1988. |
|  | (2) | Closed to fishing in those waters from a point situated at 100 m above Mill Brook downstream one kilometre to a point marked by a fishery officer from August 4 to August 8, 1988. |
|  | (3) | Closed to fishing in those waters from the Canadian National Railway Bridge downstream to the highway number 8 bridge from August 4 to August $8,1988$. |
| Tabusintac River |  | Closed to fishing except by artificial fly in those waters upstream from the Cain's Point bridge from April 15 to May 14, 1988. |
| Tobique River | (1) | Closed to fishing in those waters lying between a sign posted by a fishery officer at a point approximately 185 m downstream of a place locally known as the salmon dumping site at Gladwyn, and a sign posted by a fishery officer at a point approximately 90 m downstream of the mouth of Trout Brook from June 15 to December 31, 1988. |
|  | (2) | Closed to fishing in those waters of the Campbell River (right hand branch of the Tobique River) beginning at the mouth of the Mamozekel River upstream to a point 200 m above the Tobique Salmon Enhancement Project holding fence from July 1 to December 31, 1988. |

TABLE 11. Estimates of large salmon released by anglers on several New Brunswick rivers in $1988 .{ }^{1}$

TABLE 29. Nova Scotia variation orders, fishing prohibitions and special seasons, 1988.

| Barney's River |  | Closed to fishing in those waters upstream from a point 500 m downstream of the number 245 highway bridge crossing the river from March 2 to April 14, 1988. |
| :---: | :---: | :---: |
| Chiganois River |  | Closed to fishing in those waters downstream from the Canadian National Railway Bridge in Belmont to the number 2 Highway from April 15 to May 10, 1988. |
| Clyde River |  | Salmon season varied to be May 10 to October 15, 1988. |
| Debert River |  | Closed to fishing in those waters downstream from the Canadian National Railway bridge to its confluence with the Cobequid Bay from April 15 to May 10, 1988. |
| East River, Sheet Harbour |  | Closed to fishing in those waters upstream from a point as marked by a fishery officer, 200 metres below the Nova Scotia Power Corporation power house from June 24 to September 30, 1988. |
| East River (Pictou County) |  | Closed to fishing in those waters upstream from the George Street bridge in New Glasgow to the number 583 highway bridge in Springville from March 2 to May 15, 1988. |
| Economy River |  | Closed to fishing in those waters downstream from the mouth of Callaghan Brook to the number 2 highway bridge from April 15 to May 10, 1988. |
| Folly River |  | Closed to fishing in those waters downstream from the Canadian National Railway bridge to its confluence with the Debert River from April 15 to May 10, 1988. |
| French River |  | Closed to fishing in those waters upstream from a point 500 m downstream of the number 245 highway bridge crossing the river from March 2 to April 14, 1988. |
| Gold River | (1) | Closed to fishing in those waters from the junction with the Larder River downstream to a point marked by a fishery officer approximately 90 m upstream from the number 3 highway bridge crossing that river in the community of Gold River from April 1 to May 31. 1988. |
|  | (2) | Closed to fishing in that portion of the river as marked by a fishery officer and known locally as the "Dipping Pool", located between the "Cable Pool" and the "Kill Devil Pool" from June 1 to August 15, 1988. |
| Grand River |  | Closed to fishing in those waters between those points as marked by a fishery officer approximately 90 m upstream and 90 m downstream from Grand River Falls from July 2 to October 15, 1988. |
| Great Village River |  | Closed to fishing in those waters downstream from the mouth of Spencer's Brook to the marshland dyke aboiteau from April 15 to May 10, 1988. |
| Ingonish River |  | Closed to fishing in all waters from April 15 to May 15, 1988. |
| Inhabitants River |  | Salmon season varied to be June 15 to October 31, 1988. |
| Kirby River |  | Closed to fishing in those waters 15 m downstream and 15 m upstream from the number 24 highway bridge at Sheet Harbour Passage from June 1 to September 30, 1988. |
| LaHave River | (1) | Closed to fishing in those waters of the Main Branch downstream from a point at the south end of Wentzell's Lake as marked by a fishery officer, to a point 825 m downstream from the Canadian National Railway bridge from April 1 to May 31, 1988. |
|  | (2) | Opened to fishing in those waters upstream from Morgan Falls lying between Feindel's Bridge on the Lower Branch Road (highway number 538) in New Germany and the Cherryfield Bridge (highway number 532) at Cherryfield from June 15 to July 15, 1988. |
| Maccan River |  | Closed to fishing in those waters downstream from the number 2 highway Bridge at Southampton to the highway bridge at Maccan from April 15 to May 10, 1988. |

| Margaree |  | Closed to fishing in those waters of the Northeast Branch upstream from the Big Intervale bridge, but not including any tributaries of that branch, from February 29 to December 31, 1988. |
| :---: | :---: | :---: |
| Mersey |  | Salmon season varied to re-open in those waters between the Canadian National Railway bridge in Liverpool and a point as marked by a fishery officer approximately 91 m upstream from the Potanoc bridge in Milton from September 19 to October 15, 1988. |
| Musquodoboit River |  | Salmon season varied to re-open for the period from September 12 to September 26, 1988. |
| Nortil Aspy |  | Salmon season varied to be June 15 to October 22, 1988. |
| North (Colchester) |  | Closed to fishing in those waters downstream from the mouth of the West Branch North River to its confluence with the Salmon River from April 15 to May 10, 1988. |
| North (Victoria) | (1) | Closed to fishing in those waters upstream from the North River bridge form April 15 to May 31, 1988. |
|  | (2) | Closed to fishing from June 3 to December 31, 1988 <br> (a) in those waters of the Pot Hole, so called, lying immediately below Little Falls and downstream for a distance of approximately 7.6 m to a point as marked by a fishery officer. <br> (b) in those waters of the Pot Hole, so called, lying immediately below Twin Falls and downstream for a distance of approximately 9.1 m to a point as marked by a fishery officer. <br> (c) in those waters lying immediately below Big Falls and downstream for a distance of approximately 22.8 m to a point as marked by a fishery officer. |
| Petite Rivière | (1) | Closed to fishing in those waters downstream from Hebb Lake, but not including Fancy Lake, to the number 331 highway bridge crossing that river in the community of Petite Rivière from April 1 to May 31, 1988. |
|  | (2) | Closed to fishing in those waters of Wallace Brook from the junction with the Petite Rivière in the community of Crousetown upstream approximately 180 m to a point marked by a fishery officer from April 1 to September 30, 1988. |
| Portapique River |  | Closed to fishing in those waters downstream from the mouth of Matheson Brook to the number 2 higtway bridge from April 15 to May 10, 1988. |
| Pugwash River |  | Closed to fishing in those waters upstream of the Conn's Mills bridge from March 2 to April 14, 1988. |
| River Hebert |  | Closed to fishing in those waters from the bridge near the tree nursery in the Chignecto Game Sanctuary to the number 242 highway bridge at the village of River Hébert from April 15 to May 10, 1988. |
| Salmon River (Colchester) |  | Closed to fishing in those waters downstream from the mouth of Greenfield Brook to the number 102 highway bridge from April 15 to May 10, 1988. |
| Stewiacke River |  | Closed to fishing in those waters upstream of the railway bridge in Stewiacke to the Middle Stewiacke bridge in Middle Stewiacke from April 15 to May 15, 1988. |
| Tusket River |  | Closed to fishing in those waters from the highway bridge at the southern extremity of Lake Vaughn downstream to the Tusket River hydro station from April 1 to June 30, 1988. |
| West River, Sheet Harbour |  | Closed to fishing in those waters upstream from the Killeg Road bridge to its source, and including all tributaries, from June 24 to September 30, 1988. |

## APPENDIX 2

## CALCULATION OF CATCH AND EFFORT ESTIMATES

Nova Scotia salmon anglers are required to complete and return catch and effort cards which are attached to their licenses. Some cards are returned without prompting. In 1988, a single reminder letter was mailed to those who had not returned cards.

The overall response from the 8,027 licensed anglers was $76 \%$. One hundred and eighty-three cards were not useable (illegible or incomplete) which left 5,899 completed cards ( $73.5 \%$ ) for analysis and estimation of catch and effort.

Ratio technique
Extrapolating catch and effort data to estimate totals was accomplished using a ratio technique which was adjusted for response bias. Essentially, the ratio is the catch and effort per angler adjusted upwards to reflect catch and effort for the total number of licensees. A correction factor is used to eliminate from the population that proportion of anglers in the sample who reported that they did not fish.

An adjustment for bias is necessary because of the nature of the survey. Participants in an activity, when asked to voluntarily supply information related to that activity, typically respond at rates reflective of their level of interest. In other words, the more active or interested anglers are more likely to respond than are the casual fishermen. As a result, the data received does not represent the average angler but the more successful or more active angler. This phenomenon is commonly known as response bias. Extrapolation from the "biased" data to account for the catch of non-respondents would result in an overestimate of catch and effort. Hence the need for a bias adjustment factor.

## CALCULATION OF A BIAS ADJUSTMENT FACTOR

During the years 1983-87, as many as three reminder letters were sent to non-respondents. The resulting response, which exceeded $90 \%$ in all years, was extrapolated to $100 \%$ using a regression technique described in O'Neil et.al. (1989).

During 1983-87 responses were placed in one of four categories depending on when they were received: before prompting - voluntary (VOL); after the first reminder letter - post prompt 1 (PP1); after the second reminder letter - post prompt 2 (PP2); and after the third
reminder letter - post prompt 3 (PP3). Estimates of catch and effort extrapolated from the combined data from the four response categories had to account for less than $10 \%$ non-response. These estimates are referred to below as "complete" estimates. In 1988, since only a single reminder letter was used, data were confined to the VOL and PP1 categories.

A bias adjustment factor was arrived at as follows:
Step (1) data from each of the previous five years (1983-87) was separated to produce VOL and PP1 categories.

Step (2) The resulting VOL + PP1 data was extrapolated to account for supposed nonresponse using the ratio technique described above.

Step (3) The resulting biased catch and effort estimates calculated in step two, for all five years, were compared with the "complete" estimates to calculate a weighted mean adjustment ratio of "complete" to "biased" estimates. This ratio was applied to the biased 1988 data to adjust for response bias.

As a means of testing the validity of applying a five-year weighted mean bias adjustment factor, regressions describing the relationship between response rate and angler effort were compared for the 1983-87 period. An analysis of covariance indicated that the slopes and intercepts were similar ( $p>0.05$ ). Therefore it could be concluded that angler behaviour with respect to response, i.e., response bias, was similar in five separate years. Accordingly, application of that trend to "adjust" the 1988 and subsequent year biased estimates provide more realistic estimates of catch and effort.

## APPENDIX 3

glossary
angle (angled)
bright fish
catch per unit effort
CPUE
estimated catch
estimated effort
fecundity
grilse
harvest
kelt
large salmon
license stub
multi-sea-winter salmon
observed catch
observed effort
one-sea-winter salmon
rod-day
released fish
retained fish
spawn (verb)
stock
word-of-mouth

- to fish (fished) with rod and line using an artificial fly.
- a mature, adult Atlantic salmon that has entered fresh water prior to spawning.
- the number of large salmon or grilse caught, either retained or released, per rod-day.
- abbreviation for catch per unit effort.
- catch reported by anglers plus an estimate of catch by anglers who have not reported. A description of the estimation technique is provided in Appendix 2.
- effort reported by anglers plus an estimate of effort by anglers who have not reported. A description of the estimation technique is provided in Appendix 2.
- number of eggs per unit body weight (relative fecundity).
- an adult Atlantic salmon which matures after one winter at sea.
- fish removed from the population. Harvest, retained catch and kill are synonymous. Harvest does not include released fish.
- an adult Atlantic salmon that has spawned and has not yet left fresh water after spawning prior to its return to the ocean.
- an adult Atlantic salmon that has matured after two or more winters in the ocean.
- a post card attached to the Atlantic salmon license which provides for reporting catch and effort data.
- a maturing adult Atlantic salmon that has spent more than one winter at sea.
- the sum of the catch from license stubs of anglers who reported.
- the sum of effort from license stubs of anglers who reported.
- an adult Atlantic salmon which matured after one winter at sea; synonymous with grilse.
- any part of a day spent fishing on a river is considered a rod-day. An angler may fish a "rod-day" on more than one river in one day. For example, if an angler fishes two rivers in one day, they have fished two rod-days, one rod-day on each river.
- a fish which is not killed upon being caught but is released alive into the river. The release may be by breaking or cutting the line or by removing the hook from a landed fish.
- an Atlantic salmon which is killed upon being angled.
- the act of reproduction in fish.
- a genetically unique strain of Atlantic salmon which homes to a single river is typically thought of as an Atlantic salmon stock.
- a method of gathering catch and effort data which is based on some observation, some personal accounts of catch or effort and much heresay and guesswork to account for that which was not observed.

[^0]:    * See variation orders and fishing prohibitions on page 12.

[^1]:    * Southwest Miramichi component is based on 1974-83 mean proportion of catch by county.
