

# RENTAL MARKET REPORT

## Vancouver and Abbotsford-Mission CMAs

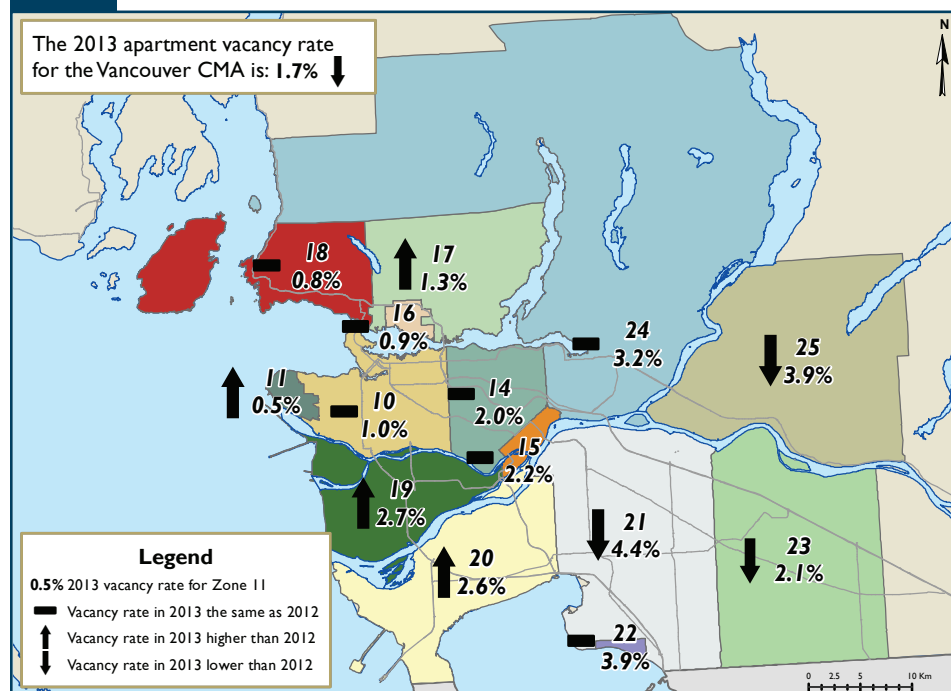

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2013

### Highlights

- Rental vacancy rates remained steady for both purpose-built rental apartments and rental condominium apartments.
- The average rental vacancy rate for purpose-built rental apartments edged lower to 1.7 per cent while rental condominium apartments edged higher to 1.1 per cent in October 2013.
- Rental housing demand generally kept pace with the modest net increase in the supply of purpose-built and secondary rental units.<sup>1</sup>

Figure 1

<sup>1</sup> Net increase in the supply of rental units refers to the addition of new units and renovated units coming onto the market and the removal of existing units from the market renovation, repair, and / or repurposing.

## Rental Vacancy Rates Remained Stable

Rental vacancy rates in the Vancouver Census Metropolitan Area (CMA) remained stable as a slight increase in the rental condominium apartment market was offset by a slight decrease in the purpose-built rental apartment segment. The average rental vacancy rate for the secondary rental condominium market edged higher to 1.1 per cent in October 2013 from 1.0 per cent a year ago; purpose-built rental apartments registered an average vacancy rate of 1.7 per cent compared to 1.8 per cent a year ago.<sup>2</sup>

Supply of both purpose-built and secondary rental market units increased over the past year. The net supply of purpose-built rental apartment units increased marginally by approximately 0.5 per cent even though the number of brand-new purpose-built rental apartment units completed since 2012 was markedly higher than any other year in the past decade. A number of existing units were temporarily removed from

the market during the past year for repair, renovation, or repurposing, partly offsetting the increase in new construction. This brought the total stock of purpose-built rental apartments to 105,547 units. Meanwhile, the stock of secondary rental market units increased 5.6 per cent to 51,224 units.

Still, the overall demand for rental housing has kept pace with the increase in supply, leaving the overall vacancy rates relatively steady. The number of occupied rental units rose by approximately 490 purpose-built and 2,618 rental condominium apartments. This compares with a net supply increase of 480 purpose-built and 2,696 rental condominium apartments.

The majority of the increase in the supply of purpose-built rental apartments – nearly 80 per cent – was in the City of Vancouver, where vacancy rates remained relatively unchanged across all bedroom types. Within the City of Vancouver, these new rental units were mostly in the

Figure 2

<sup>2</sup> Due to seasonal factors, the results of the October 2013 Rental Market Survey are not directly comparable with the results from the April 2013 Rental Market Survey.

Figure 3

Vancouver Downtown and English Bay rental zones, as well as in the Mount Pleasant / Renfrew Heights rental zone. Yet, vacancy rates in these areas either remained relatively unchanged, or, in the case of Mount Pleasant / Renfrew Heights, fell from 0.9 per cent to 0.4 per cent.

The new purpose-built rental supply seems to have impacted vacancy rates in newer buildings more than those in buildings constructed before 2000. The vacancy rate for purpose-built rental apartments that were completed in 2000 or later, rose from 1.3 per cent to 2.2 per cent during the past year, whereas the vacancy rates for units that were built prior to 2000, either edged lower or remained relatively unchanged. The increase in vacancy rates in relatively new buildings may also reflect competition from rental condo units, or stronger demand for older rental units which tend to have lower rents than those in newer buildings.

Rental demand in the Vancouver CMA is supported by both a steady growth in household formation and the relative cost of home ownership versus renting. Household growth tends to be driven by migration more than by natural change. The number of households formed in the Vancouver CMA is estimated at approximately 17,500 per year over the last five

years<sup>3</sup>. Most migrants tend to rent before purchasing a residence.

Across the Vancouver CMA, average vacancy rates were highest in Surrey, Maple Ridge, and Pitt Meadows, and lowest in the City of Vancouver and the University Endowment Lands. The majority of new migrants tend to stay in and around the city core when they first arrive, driving up the demand for rental housing in these areas.<sup>4</sup> As well, housing prices in higher vacancy rate suburban areas are generally lower than in areas closer to the City of Vancouver. As a result, the movement from rental to homeownership tends to be higher in areas like Surrey, Maple Ridge, and Pitt Meadows, freeing up rental units and pushing vacancy rates higher.

The demand for rental housing often runs counter to the housing sales trend in the year prior. During the year prior to October 2013, existing home sales slowed in the fourth quarter of 2012 then accelerated through 2013, as did sales of new homes. Meanwhile, the number of

Figure 4

<sup>3</sup> BC Stats P.E.O.P.L.E 2013 Household Projections

<sup>4</sup> Census 2006

households continued to grow, so the rental housing market benefitted from this increase in housing demand.

Full-time job growth in the Vancouver CMA over the past year has been relatively flat. Gains achieved earlier in the year were quickly offset so that by the end of the third quarter, full-time employment for all age cohorts was nearly back where it was a year ago. Without robust growth in full-time employment to support home ownership, renting would likely be favoured over owning, especially when the overall unemployment rate remained just under 7 per cent even as the overall labour force participation rate edged lower, suggesting generally softer employment conditions for most.

### Pace of Rent Increase Held Relatively Steady

An increase in rental demand in tandem with increased rental supply has kept the pace of rent increase relatively steady for purpose-built rental apartments. Fixed-sample rent changes for purpose-built rental apartments, which measures rent growth based on those structures that were common to the survey sample for both years, showed a steady 2.2 per cent increase in the Vancouver CMA, similar to the 2.3 per cent increase recorded in October 2012. The allowable rent increase under the Residential Tenancy Act was higher a year earlier – 4.3 per cent in 2012 and 3.8 per cent in 2013.

Within the CMA, the City of Vancouver, along with other areas like Surrey, North Vancouver, and Burnaby, posted the highest same-sample rent changes (see Table 1.1.5). Surrey also had the highest availability rates in October 2013 and 2012, suggesting that tenant turnover and new leases

signed were part of the reason behind the relatively stronger same-sample rent increase. The average rent level for new and existing structures in Surrey was also one of the lowest in the Vancouver CMA.

The increased competition from new and / or renovated purpose-built rental units may have added

some pricing constraints for rental condominium apartments. Rental condominium apartments usually command a rent premium over purpose-built rental apartments. Over the past five years, the average rent premium recorded for a two-bedroom rental condominium apartment was approximately 32 per cent. In October 2013, however,

Figure 5

Figure 6

this average rent premium has fallen to 23 per cent. As well, the average rents recorded for two-bedroom rental units in the Vancouver CMA were mostly lower in October 2013 than those noted a year ago.

Purpose-built rental apartments, in general, are still the least expensive housing option in the Vancouver CMA. The average rents for a one- and two-bedroom unit were \$1,005 and \$1,281, respectively. Comparatively, to rent a condominium apartment would require \$1,287 and \$1,580 for a one- and two-bedroom unit, respectively. However, the cost of renting either a purpose-built rental or a condominium apartment would still be significantly lower than buying a comparable home in the Vancouver CMA.

## Abbotsford-Mission CMA

- A slight decline in the rental universe and steady rental demand moved vacancy rates down from 4.2 per cent in 2012 to 3.2 per cent in 2013.
- Employment and population growth contributed to steady rental demand.
- Higher rents for bachelor and one-bedroom units increased overall rents in the Abbotsford-Mission CMA.

## Vacancy Rates Decline in the Abbotsford-Mission CMA

The apartment vacancy rate declined a full percentage point from 4.2 per cent in 2012 to 3.2 per cent in 2013 in the Abbotsford-Mission Census Metropolitan Area (CMA).

Figure 7

Figure 8

(Figure 8) A slight decline in the number of purpose built apartment accommodations and steady rental demand supported by employment and population growth helped drop the apartment vacancy rate below 4.0 per cent for the first time since 2009. Modest additions to the secondary rental stock in 2013 did not off-set

the declines in the purpose-built apartment rental stock.

The total purpose built apartment rental stock in the Abbotsford-Mission CMA declined by 40 units from 2012 and 2013. Though these units represent only a fraction of the purpose-built universe, the amount

was enough to lower the apartment vacancy rate. With the majority of the rental stock in the Abbotsford-Mission CMA being over 20 years in age, the decline in the purpose built stock is due to the renovation and upgrading of suites to compete with newer rental units. The majority of these units that were temporarily removed from the rental universe were in Mission.

Employment gains in 2013 have helped to keep rental demand steady. Job growth in the Abbotsford-Mission CMA has been the highest among all the CMAs in the province this year. However, year-over-year employment growth has been in part-time positions while the number of full-time jobs has remained steady. With more part-time employment, renting tends to be the economical choice over homeownership.

Population growth and employment gains among young adults in the region have contributed to steady rental demand. Over one-third of the population growth from 2012 and 2013 in the Abbotsford-Mission CMA came from the 20-34 age cohort.<sup>5</sup> Part of the population growth may be due to an increase in youth employment, which is up 29 per cent in the first nine months of 2013 compared to the same time last year. Also school enrolment at the University of the Fraser Valley, Abbotsford campus

Figure 9

as been on the rise with an annual growth rate of 2.5 per cent.<sup>6</sup>

The secondary rental market added little to the overall rental stock this year. Housing starts in 2011 and 2012 have been below the long term average in the Abbotsford-Mission CMA, lowering the number of completed units available for rental purposes. Multi-family strata titled units (apartment condominiums and townhomes), a major contributor to the secondary rental market during the last five years, are estimated to have added only 32 suites this year, much lower than the high of 164 suites five years earlier.<sup>7</sup>

Vacancy rates declined compared to last fall for almost all bedroom types in the Abbotsford-Mission CMA. One bedroom and two bedroom suites had a full percentage point drop from the previous year. Bachelor units moved down to 4.1 per cent compared to 5.0 per cent in 2012. Further, most demand for rental has been in Abbotsford City rather than Mission. The number of rented units increased slightly over 2012 levels in Abbotsford City, while the number of rented units decreased slightly in Mission in the same time period.<sup>8</sup>

<sup>5</sup> BC Stats PE.O.P.L.E. 2013 population estimates and projections.

<sup>6</sup> University of Fraser Valley Quick Facts for 2012.

<sup>7</sup> Rental strata units is calculated by taking a conservative estimate of 20 per cent of the total number of completed multi-family strata units between two consecutive fall rental surveys. The percentage of 20 per cent is used based on past calculations of strata units that are used for rental purposes.

<sup>8</sup> The number of rented units is the number of vacant units minus the number of private apartment units in rental universe.

## A Rise in Demand and Fewer Apartment Units Raised Rental Rates

The fixed-sample rent increased by 1.6 per cent in October 2013, higher than the 1.0 per cent increase the previous year but below the 2013 provincial average increase of 1.9 per cent.<sup>9</sup> The average apartment rent in Abbotsford-Mission CMA was \$746 in 2013. (Figure 9) For a two-bedroom apartment, the average rent was \$820 per month. A slight rise in rental demand, especially for bachelor units, in Abbotsford City and a decline in purpose built apartment units in Mission contributed to average rents above 2012 levels.

Demand increased for smaller sized units in Abbotsford City as bachelor suites recorded stronger rent increases compared to 2012. The average same sample rent for bachelor units increased 7.5 per cent in Abbotsford City while decreasing 0.7 per cent in Mission. Part of the rent increase may be due to a higher availability rate for bachelor suites recorded this year over last year in Abbotsford City. When a apartment unit becomes available for a new tenant, apartment owners can raise rents to reflect the annual allowable rent increase and any renovations and improvements.<sup>10</sup>

Slightly higher demand of one-bedroom units in 2013 contributed to higher rents for this unit type in Abbotsford City. The universe of one-

bedroom units in Abbotsford City remained steady, decreasing by only 6 units between last year and this year. The average same sample rent for one-bedroom suites in Abbotsford City rose 2.5 per cent in 2013 above 2012 levels.

Rents in Mission remained stable as a decline of 28 one-bedroom units off-set lower rental demand for this unit type. The 28 unit decline represented a seven per cent decline in the total rental universe in Mission, and totalled just over two-thirds of the total decline in rental units in the Abbotsford-Mission CMA. The overall average rent in Mission remained the same as last year's average of \$667.

Lower vacancy rates for lower-priced apartments suggest that some renters may be sensitive to costs. Compared to 2012, vacancy rates for units with a monthly rent below \$900 per month declined in the Abbotsford-Mission CMA, while vacancy rates for units \$900 per month and above increased. This is partly explained by the increase in part-time employment resulting in renters seeking lower-priced accommodations. As well, average weekly earnings have not grown over 2012 levels. Average weekly earnings in the Abbotsford-Mission CMA were down three per cent by the end of the third quarter of 2013. In 2012, average weekly earnings rose seven per cent during that time period, and vacancy rates for units renting in the range \$900-\$999 dropped from 4.3 per cent in October 2011 to 1.3 per cent in October 2012.

In Table 1.2.2, the difference in the average rent for a unit in buildings constructed between 1960-1974 and 1990-1999 was under \$81. The renovation of older suites, particular those constructed from 1960-1974, by apartment owners are being done to better compete with newer rental units. Rent levels are highest for newer rental apartments constructed after 1999. The average apartment rent for buildings constructed after 1999 was \$884.

<sup>9</sup> This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

<sup>10</sup> BC Residential Tenancy Act.

RMS ZONE DESCRIPTIONS - VANCOUVER CMA	
Zone 1	<b>West End, Stanley Park</b> is the area between Stanley Park and Denman Street and extends to Coal Harbour to the north and English Bay to the south.
Zone 2	<b>English Bay</b> runs along Sunset Beach and English Bay to the south, connects to Davie Street to the North and Burrard Street to the East.
Zone 3	<b>Downtown</b> is the remainder of the West End not covered in Zone 1 and 2. Does not include the Downtown Eastside.
<b>Zones 1-3</b>	<b>West End/Downtown</b>
Zone 4	<b>South Granville/Oak</b> is west of Mount Pleasant and extends south to 33rd Avenue and west to Granville Street. Also includes the Fairview area and contains a section between Broadway to the north and 16th Avenue to the south, Burrard Street to the west and Granville Street to the east.
Zone 5	<b>Kitsilano/Point Grey</b> is the area west of South Granville/Oak that extends along 16th Avenue to the University Endowment Land.
Zone 6	<b>Westside/Kerrisdale</b> is the area south of Kitsilano/Point Grey and South Granville/Oak, and includes the areas: Kerrisdale, Mackenzie Heights, Dunbar, Shaughnessy and Oakridge.
Zone 7	<b>Marpole</b> is an area in South Vancouver that borders south of 57th Avenue between Cambie Street to the east and MacDonald Street to the west, and extends south down to the Fraser River.
Zone 8	<b>Mount Pleasant/Renfrew Heights</b> is the area that extends from the Mount Pleasant area to the west to Renfrew Heights to the east, and includes the neighbourhoods of Fraser and Knight. The area boundary to the north is Great Northern Way and Broadway, and roughly 33rd Avenue to the South.
Zone 9	<b>East Hastings</b> is the northeast area of Vancouver City, and includes the Downtown Eastside.
Zone 10	<b>Southeast Vancouver</b> includes the areas: Killarney, Fraserview, Collingwood and Champlain Heights.
<b>Zones 1-10</b>	<b>Vancouver City</b>
Zone 11	<b>University Endowment Lands</b> includes both the municipality and University of British Columbia. Note: the Rental Survey does not include student housing.
Zone 12	<b>Central Park/Metrotown</b> is the area between Boundary Road to the west and Royal Oak Avenue to the east, Moscrop Street and Gilpin Street to the north and Marine Drive to the south.
Zone 13	<b>Southeast Burnaby</b> extends to the border of New Westminster and includes the areas: Edmonds, Middlegate, Buckingham Heights, Deer Lake and Burnaby Lake.
Zone 14	<b>North Burnaby</b> is the northern half of Burnaby and includes the areas: Willingdon Heights, Brentwood Park, Capitol Hill, Sperling, Simon Fraser and Lougheed.
<b>Zones 12-14</b>	<b>Burnaby City</b>
Zone 15	<b>New Westminster</b> is the city boundaries.
Zone 16	<b>North Vancouver City</b> is the city boundaries.
Zone 17	<b>North Vancouver DM</b> is the district boundaries.
Zone 18	<b>West Vancouver</b> is the district boundaries.
Zone 19	<b>Richmond</b> is the city boundaries.
Zone 20	<b>Delta</b> is the corporation boundaries.
Zone 21	<b>Surrey</b> is the city boundaries.
Zone 22	<b>White Rock</b> is the city boundaries.
Zone 23	<b>Langley City and Langley DM</b> includes both the city and township boundaries.
Zone 24	<b>Tri-Cities</b> consists of Coquitlam, Port Coquitlam and Port Moody.
Zone 25	<b>Pitt Meadows/Maple Ridge</b> is the district boundaries for both municipalities.
<b>Zones 1-25</b>	<b>Vancouver CMA</b>

RMS ZONE DESCRIPTIONS - ABBOTSFORD CMA

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- No units exist in the universe for this category n/a: Not applicable

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- No units exist in the universe for this category n/a: Not applicable

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

### Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

### Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
