

RENTAL MARKET REPORT

Québec Highlights*

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2013

Figure 1

Figure 2

*Only centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAAs.

Highlights

- In October, the average vacancy rate for privately initiated structures with three or more units was 3.1 per cent Quebec urban centers (10,000 or more population).
- The vacancy rate remained stable compared to last year.
- The majority of the province's 45 urban centres did not record significant variations in their vacancy rate.
- The market is still tighter in the market segment of larger apartments.
- The average rent for two-bedroom apartments stood at \$ 699. The estimate change in average rent was 1.7 per cent.

Stability on most rental markets across Québec

According to the results of the Rental Market Survey conducted by Canada Mortgage and Housing Corporation (CMHC), the overall vacancy rate for Québec's urban centres (10,000 inhabitants and over) remained essentially unchanged from October of last year, having reached 3.1 per cent in 2013, compared to 3.0 per cent in 2012.

Regionally, most of the province's 45 urban centres did not see any change in their vacancy rates compared to October 2012. Nearly half of them did not register any statistically significant changes, and most of those that did posted increases that were relatively small overall.

As expected, this stability reflected the situation observed in the province's census metropolitan areas (CMAs) as a whole. The same held true for mid-size agglomerations. As for smaller agglomerations, they showed a very slight vacancy rate increase.

Supply and demand remain stable overall

While the changes in rental market conditions across Québec continued to reflect the effects of the fundamentals on supply and demand, the diverse prevailing environments were such that these impacts varied depending on the areas.

The addition of new units to the rental housing supply remained slow in several large urban centres in Québec over the past year. Investors focused on the more profitable condominium segment. That said, several agglomerations still registered increases in their rental housing supply, which affected their markets.

Over the same period, demand remained significant overall. In addition to the effect of the stable net migration, it should be noted that the movement to homeownership probably slowed down (weakened by the new financial framework and the stagnant job market conditions).

As with supply, there were regional differences in demand. In fact, the more or less favourable economic environment had an impact on net migration and, in turn, on rental housing demand.

Market segments

Once again this year, a review of the vacancy rates by unit size revealed relatively tight market conditions for larger apartments. The lower formation of young households, itself linked to the reduced access to the labour market, is one noteworthy working hypothesis with regard to smaller apartments, as they are more in demand by this demographic segment.

Meanwhile, demand for larger apartments has likely benefited from a substitution effect favouring these dwellings over starter homes (single-detached houses and condominiums). According to the survey results, a gap of 1.6 percentage points separates the vacancy rate for bachelor apartments from the rate for three-bedroom units.

Rents

The average rent for two-bedroom apartments for all Québec urban centres reached \$699 in October of this year. The averages were \$531 for bachelor apartments and over \$800 for units with three or more bedrooms. While the provincial average generally reflected the situation for all CMAs, the Montréal,

Québec and Gatineau areas stood out with average rents hovering around \$700, whereas the other three CMAs had monthly averages varying between \$529 and \$574.

Once again this year, the provincial average rent was about \$100 higher than the average for centres with 50,000 to 99,999 inhabitants and about \$150 higher than the average for the smaller agglomerations, where the average rents ranged from \$400 to \$600 according to apartment size. These gaps in the levels were mainly due to differences in the economic bases.

It is estimated that, since October 2012, the average rent for two-bedroom apartments in Québec has risen by 1.7 per cent. Last year at the same time, the estimated change at the provincial level was 0.9 per cent over October 2011. The estimated change in the average rents registered this year was similar to the levels recorded for most CMAs. However, stronger increases were noted in areas where market conditions were tighter. This was the case for the Montréal, Québec and Saguenay CMAs. In the other urban agglomerations (less than 100,000 inhabitants), the average increases also exceeded the provincial rate.

In analyzing the rents, it is important not to interpret the changes in rents too strictly in line with the higher or lower vacancy rates as, in some cases, the results may seem counterintuitive. In fact, some composition effects still remain, for example, rental units renovated/upgraded or changing tenants, because the survey does not collect data to such level of details.

As for the different market segments according to apartment size, they all posted increases close to the provincial average.

Rental condominiums

For several years now, CMHC has been conducting a survey of the secondary rental market: that of rental condominiums. This is a noteworthy market, given the greater popularity of the condominium tenure option in the province's major centres.

In the Montréal CMA, about 12 per cent of the condominiums were rental units in October 2013, a proportion that was similar to that measured last year but higher than that estimated in 2011 (9.3 per cent). It should be noted that, during the past year, the condominium housing stock grew in Montréal. The rental condominium vacancy rate (2.7 per cent) remained stable for a third straight year and was again comparable to the rate on the purpose-built rental market (excluding the retirement home segment). Given these results, it would seem that, even with the increase in supply, demand has stayed strong on the secondary rental market in Montréal.

In the Québec CMA, the result was comparable to that observed in Montréal, as the condominium stock grew as did the share of rental units. According to the 2013 survey results, this proportion is close to 10 per cent. However, the vacancy rate rose significantly over the level recorded in the fall of 2012 (reaching 5.9 per cent this year, compared to 2.2 per cent last year) and therefore exceeded the vacancy rate on the conventional rental market (2.3 per cent). The increased level of condominium construction in the region and the easing in this market largely explains this shift.

A comparison of the results for Montréal and Québec interestingly revealed that the vacancy rate gaps between the secondary and conventional rental markets did not

match the differences in the average rents. In fact, in Montréal (where the vacancy rates are the same), the gap in the average rents between two-bedroom rental condominiums and purpose-built rental housing units of the same bedroom type was estimated at 54 per cent, compared to about 30 per cent in Québec, where conditions on the secondary rental market were softer. The easing noted in Québec was attributable to a proportionally greater increase in supply in this CMA.

Considering these results and the significance of the condominium market in the province recently, it will be essential to closely track the secondary rental market over the coming years.

Notwithstanding these regional disparities, the notable rent gap between the secondary and conventional rental markets is explained by the fact that the condominium rental stock is relatively newer and generally more upscale than the purpose-built rental housing stock.

Around the province

In the Montréal CMA, the rental housing vacancy rate held steady at 2.8 per cent this year. This result was in line with the trend of relative stability that began in 2006 and reflected a context where demand and supply changed little in comparison with the prior year. Between the last two surveys, demand for rental housing, while supported by net migration, was limited by the sluggish job market conditions for young people aged from 15 to 24. On the supply side, very few new units have been added to the rental housing stock in recent years. The average rent for two-bedroom apartments reached

\$730, and the estimated change in the average apartment rent in this category was 2.0 per cent between October 2012 and October 2013.

The results of the October survey showed that, for a fourth year in a row, the market eased slightly in the Québec CMA, as the vacancy rate increased from 2.0 per cent last year to 2.3 per cent this past fall. With the upward trend in rental housing starts, market conditions have softened in recent years. That said, the current rate, which is relatively low, and the gradual easing indicate that the rental housing demand has remained strong. The fixed sample average rent increase for two-bedroom apartments was estimated at 1.0 per cent between the October 2012 and October 2013 surveys, and the average rent in this category was estimated at \$757.

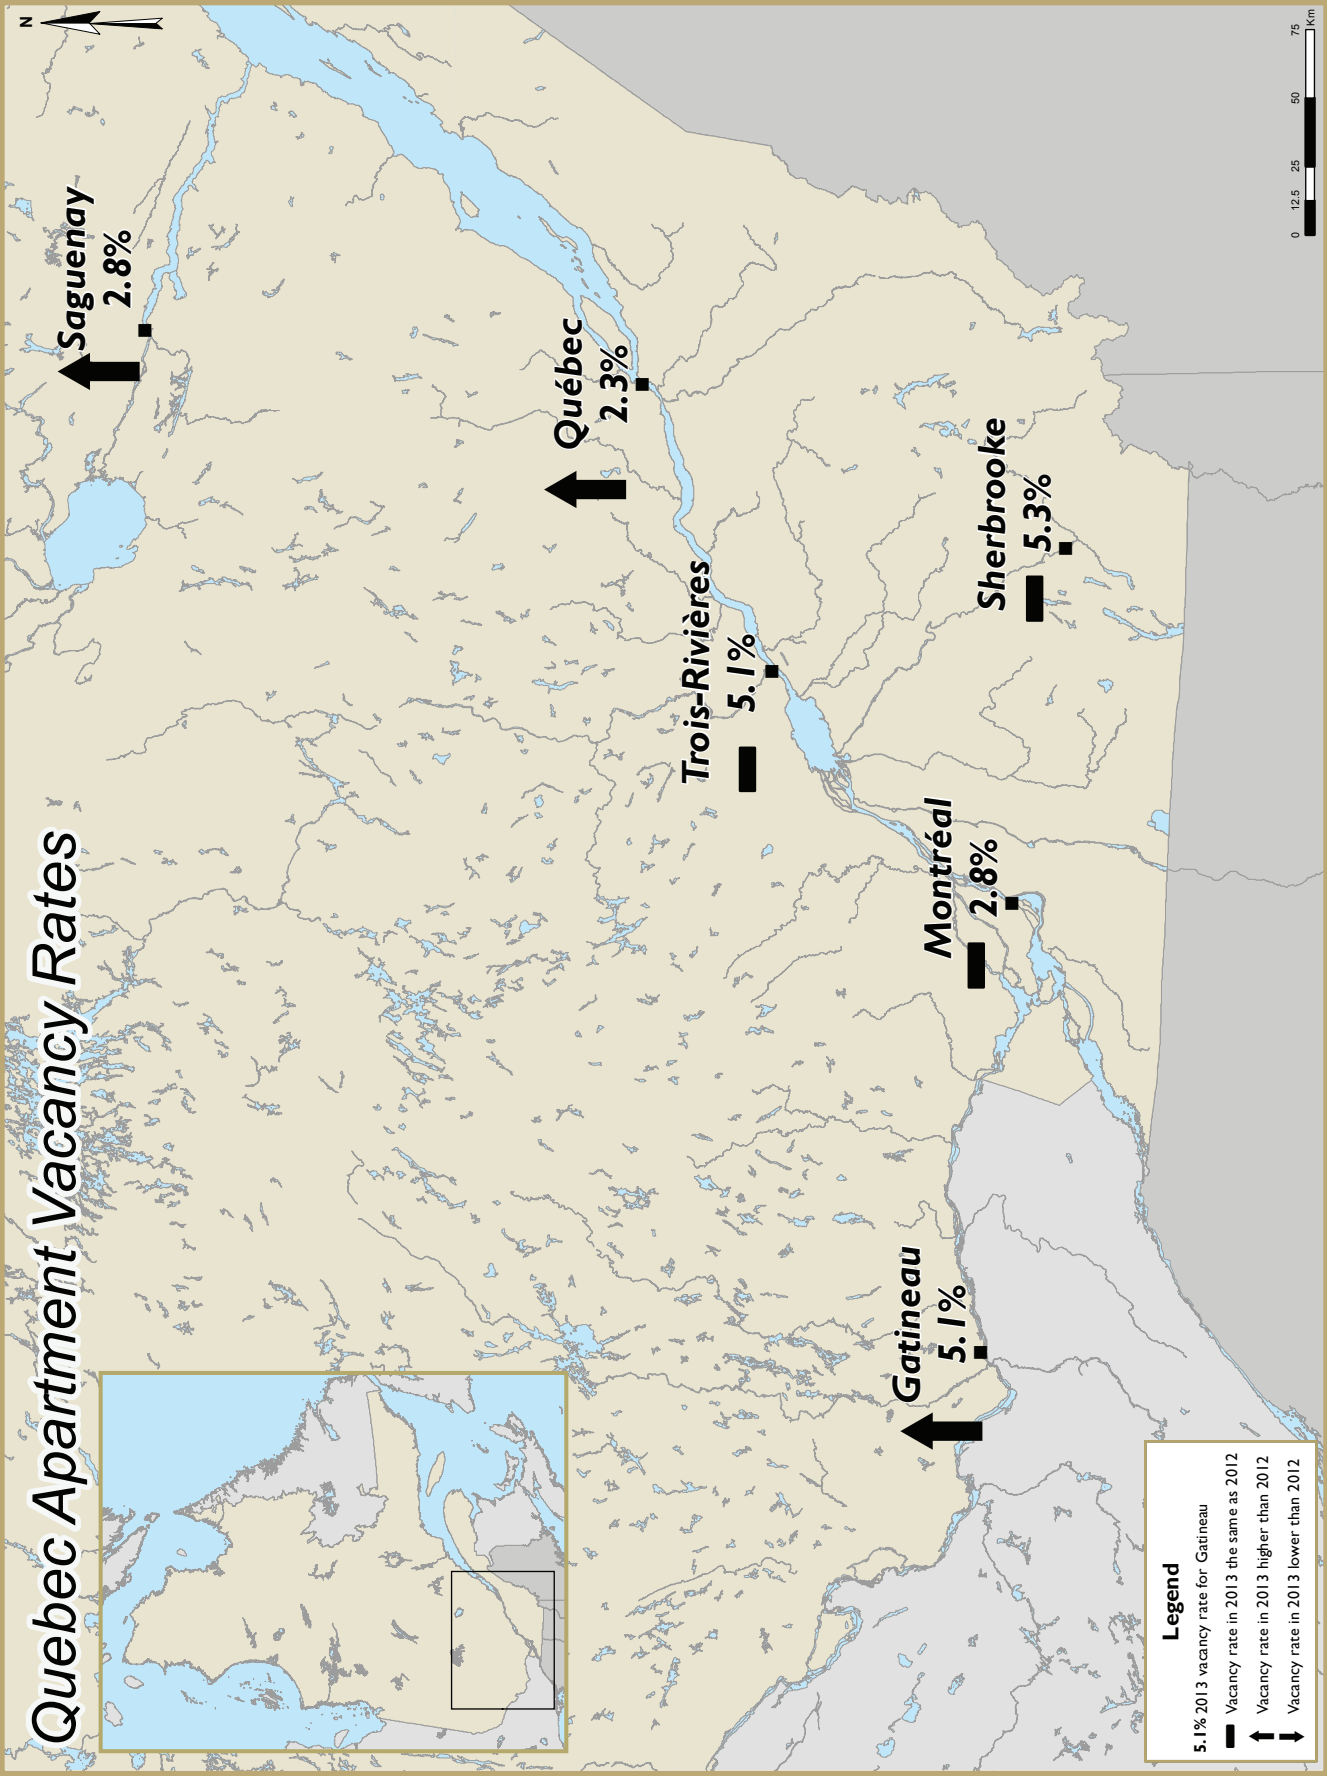

The Québec part of the Ottawa-Gatineau CMA registered another notable increase its vacancy rate. In fact, the proportion of unoccupied units, which was 2.2 per cent in October 2011 and rose to 3.3 per cent in 2012, reached 5.1 per cent this year. The increase in the vacancy rate this year was attributable to a slowdown in demand for rental units, given that few new rental units were added to the area's housing stock in the past year. The average rent for two-bedroom apartments has now reached \$744. The survey results indicate that the estimated change in the average apartment rent was negative compared to 2012.

Estimated at 5.3 per cent, the rental apartment vacancy rate remained relatively stable in the Sherbrooke CMA. This stability came on the heels of a period of easing from 2003 (vacancy rate of 0.7 per cent) to 2010 (4.6 per cent), during which the

movement to homeownership was sustained. The concurrent increases in demand and supply were such that the vacancy rate did not show any significant change this year over last year. According to the results of the October 2013 survey, the average two-bedroom apartment rent in the CMA reached \$591. The estimated change in the average apartment rent was 1.1 per cent between the October 2012 and October 2013 surveys.

After easing last year, the rental market in the Trois-Rivières CMA remained stable this year. According to the fall survey results, the proportion of unoccupied units reached 5.1 per cent in October 2013. This stability of the rental market was largely due to a lower demand and a less abundant supply of new units. The average rent for two-bedroom apartments, estimated at \$555, was among the lowest in the province, and the levels varied significantly depending on the sectors. The estimated change in the average rent was 1.1 per cent.

The vacancy rate on the Saguenay area rental market was estimated at 2.8 per cent in October 2013, compared to 2.0 per cent a year earlier. A decline in youth employment no doubt weakened demand for rental housing in the area, while the increase in rental project completions pushed up supply on this market. The average rent for two-bedroom apartments was estimated at \$571.

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- No units exist in the universe for this category n/a: Not applicable

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
