First Nations Mold Remediation Case Study - Ahousaht First Nation
This case study highlights the mold remediation efforts in the Ahousaht First Nation located in British Columbia. This community receives more than two times the amount of rainfall that Vancouver receives in a year. Additionally, the area has poor soil quality, which makes it difficult for houses to have proper drainage. The combination of heavy rainfall and problematic ground water conditions contributed to mold problems in many homes.

Ahousaht's approach to solving its mold problem included special emphasis on building a new housing team, developing new construction policies and practices, and training local people to build capacity in the community to remediate and construct new houses. Ahousaht First Nation's housing has seen noticeable improvements and now the focus is on achieving good ventilation, circulation of air in the homes and exhausting the stale moist air outdoors.
