Hamilton CMA total housing starts down in the second quarter

Hamilton Census Metropolitan Area (CMA) total housing starts were down in the second quarter of 2013 compared to the same quarter a year ago. This quarter's decrease

occurred across all dwelling types, with the exception of townhouses. However, the trend in total housing starts (based on a six-month moving average of the monthly seasonally adjusted annual rates (SAAR)¹ of total housing starts) which inched up in the second quarter 2013 compared to the previous quarter, suggests that local housing construction is recovering from the decline seen during the second half of 2012.

¹ Seasonally adjusted annual rates (SAAR) are monthly figures adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

On a submarket basis, townhouse starts increased by double digits across the Hamilton CMA. Typically, first-time buyers are price sensitive because many of them do not have the financial capability to opt for a single-detached dwelling which is generally more expensive. As the price gap between a new single-detached and a new townhouse remained significantly wide, more first-time buyers have shifted their demand in favour of townhouses relative to single-detached housing. As well, the supply of low-end existing homes has been declining consistently in the past two years. This phenomenon has encouraged some first-time buyers to choose the more affordable new home types which in turn have supported the increase in townhouse starts.

Brantford CMA total housing starts up in the second quarter

After weak performance in the previous three quarters, Brantford Census Metropolitan Area (CMA) total housing starts advanced in the second quarter of 2013. The increase was entirely due to stronger construction of townhouses. The second quarter marked the highest quarterly number of townhouse starts since the third quarter of 1990. Many of the forces which have bolstered townhouse starts in the Hamilton CMA this second quarter, such as low mortgage rates and surging inmigration of the first-time homebuyer age group (25-34), have produced the similar result in the Brantford CMA.

Given that residential construction activity was particularly weak in the past nine months, the strong

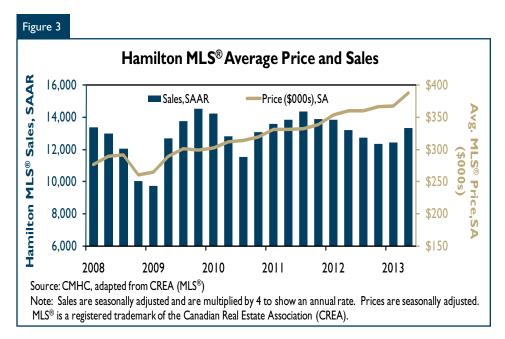

performance this second quarter can be seen as a return to the average household formation of the last ten years. Year-to-date, total housing starts across the Brantford CMA have reached 193 units, up from 181 units registered in the first six months of 2012.

Resale Market

Hamilton CMA Existing home sales increased in the second quarter

Hamilton Census Metropolitan Area (CMA) seasonally adjusted existing home sales increased significantly in the second quarter of 2013. Following

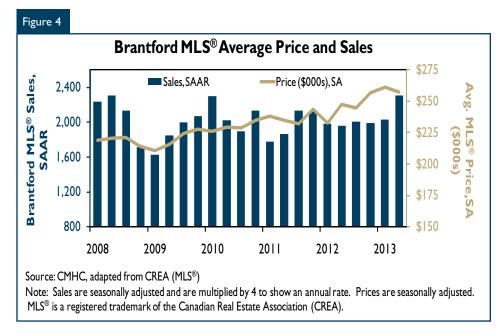

a marginal increase in the first quarter of the year, Hamilton's existing home market showed signs of recovery in the second quarter. Hamilton's housing market has been supported by out-of-town buyers as the average home price gap between Hamilton and the Greater Toronto Area (GTA) remains significantly wide.

On a submarket basis, the number of local markets was split evenly between those with year-over-year declines and those that posted gains in the second quarter 2013. Existing home sales in Ancaster, Glanbrook, Waterdown, Hamilton Centre, Stoney Creek and Burlington were up compared to the second quarter of last year. Meanwhile, sales in Hamilton Mountain, Hamilton East, Hamilton West, Grimsby, Dundas and Flamborough remained below last year's levels, although the declines were at a lesser degree.

Hamilton CMA average home price up

In the second quarter of 2013, the seasonally adjusted existing home average price in the Hamilton CMA increased sharply suggesting the housing market recovery has gained traction. Strong second quarter resale activity has propelled Hamilton's average price growth to its highest level since the second quarter of 2009. Essentially, the number of sales during the second quarter 2013 increased faster than the number of new listings,

which has resulted in tighter market conditions. Average existing home price increases were widespread across all local areas, with the exception of Grimsby and Hamilton East, where prices declined modestly.

A shift in demand towards highend homes helped strengthening Hamilton's average price growth this second quarter. The market share of existing homes sold at \$750,000 or more increased to seven per cent in the second quarter 2013 from five per cent during the same quarter last year. The market share of homes sold at \$400,000 or more reached 36 per cent up from 31 per cent in the second quarter of 2012. Conversely, existing homes that cost less than \$200,000 lost market share due in part to the limited supply of low-end homes.

Brantford CMA existing home sales advanced in the second quarter

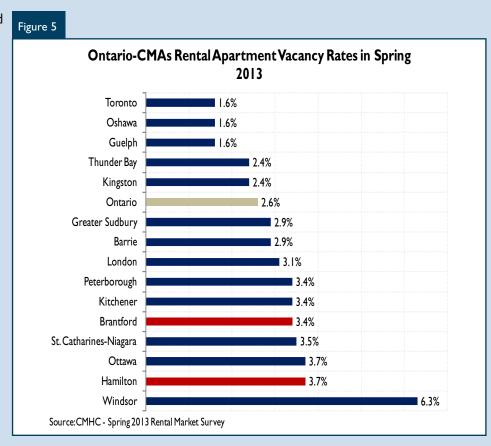

The second quarter seasonally adjusted existing home sales in the Brantford CMA advanced by double digits from a moderate level in the first quarter. Year-to-date, existing home sales in the Brantford CMA have also surpassed last year's level. Strength in Brantford's existing home sales can be attributed to two main factors. Firstly, full-time employment has been growing steadily since late 2012 highlighting business confidence in the local economic recovery. Secondly, low mortgage rates are prompting more people to purchase a home.

Hamilton and Brantford Apartment Vacancy Rates Up in Spring 2013

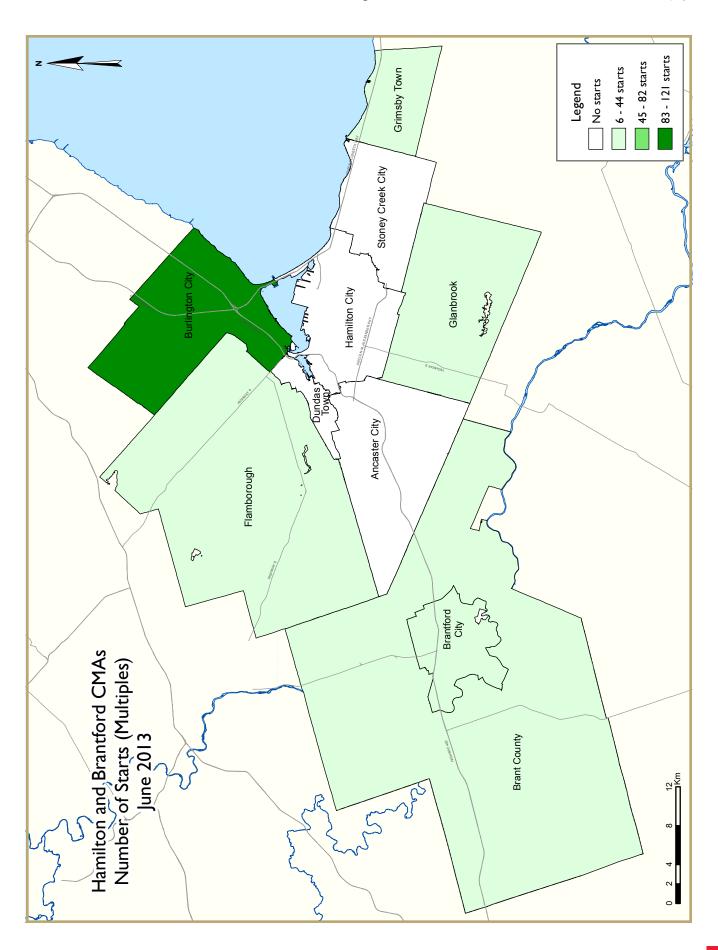

According to Canada Mortgage and Housing Corporation's (CMHC) spring 2013 Rental Market Survey, the Hamilton Census Metropolitan Areas (CMA) apartment vacancy rate reached an average of 3.7 per cent in the spring of 2013, up from 2.9 per cent in the spring of 2012. Meanwhile, the Brantford CMA apartment average vacancy rate increased by only one-tenth of a per cent to 3.4 per cent during the same period.

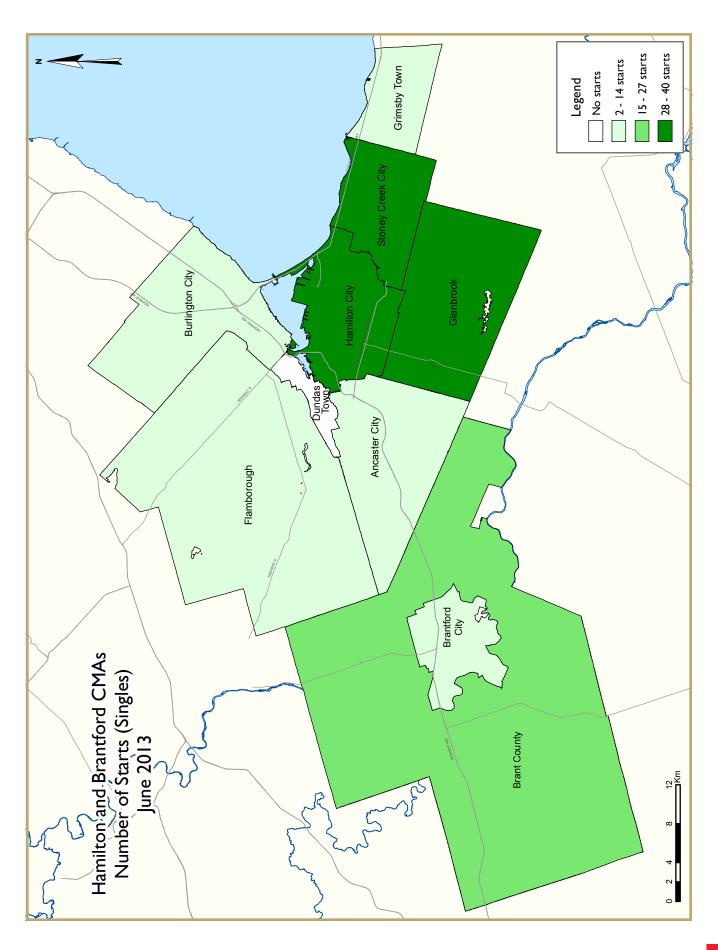

Notable factors putting upward pressure on vacancy rates in Hamilton and Brantford include: weak job growth among the prime renters (particularly those between the ages 18 and 24) and more renters moving into homeownership as suggested by the strong existing home sales. In addition to demand factors, the supply of purpose-built rental units in Hamilton increased this spring.

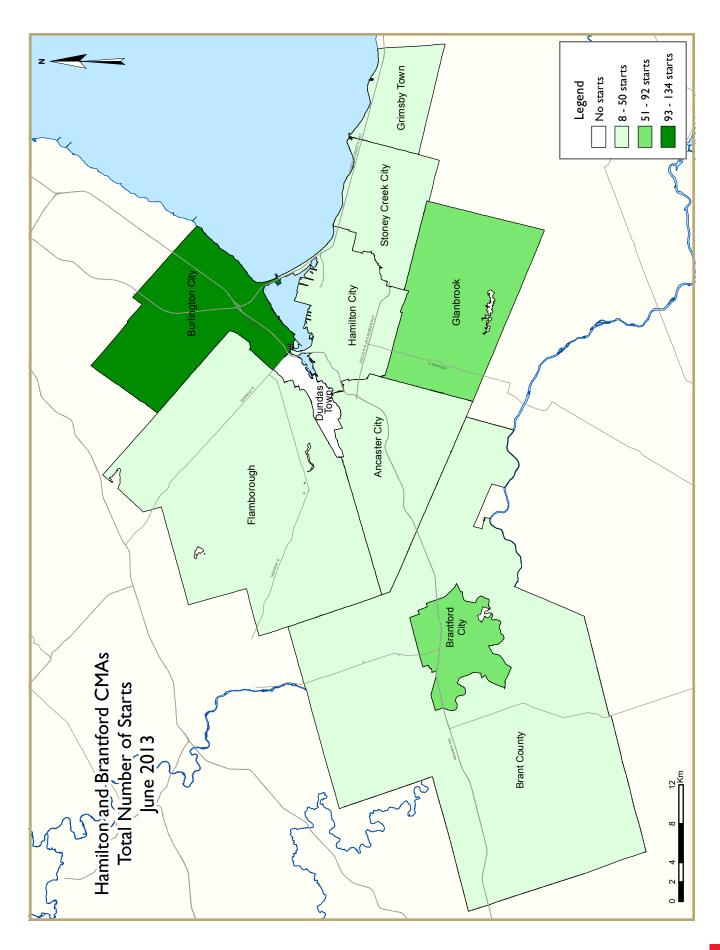

Despite the jump in average vacancy rate this spring, Hamilton's fixed sample two-bedroom apartment rent grew at a faster pace of 3.3 per cent from 1.9 per cent in the spring of 2012.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
