

HOUSING NOW

London CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Third Quarter 2013

New Home Market

High-end home and multiple starts growing

Total starts in the second quarter in the London CMA were four per cent higher than in the second quarter of 2012, primarily on strong townhome and apartment starts. Strength in the new home market in the second quarter following a slow start to the year brought year-to-date starts to a level just below tally for the same period in 2012.

Single-detached start activity in the City of London continues to be slower than last year's results. Discussions with homebuilders suggest that while there is activity in the sales offices, some buyers continue to want to delay the purchase of their home for a year or two. The expectation of both continued job growth and limited upward pressure on mortgage rates are two incentives that may be keeping potential buyers on the sidelines. Although single-detached starts have been slower through 2013 than in 2012, apartment

and row home starts posted gains over the 2012 result. Year-to-date townhome starts in the City were 19 per cent higher than the year prior. The majority of the townhome construction occurred in the northern section of the City of London in new condominium developments.

Despite slowed single-detached activity in the City of London, single-detached construction outside of the City grew through the first half of the year relative to the first half of 2012. The majority of the growth coming from St. Thomas and Strathroy-Caradoc where average prices are well below the average for single-detached homes in the City of London. Just as people are looking further afield in the MLS® market, new homes in areas outside of the City are appealing to some buyers looking to stretch their housing dollars.

The average price for a recently completed home in the CMA grew by four per cent in a quarterly year-over-year comparison. Sales of new homes priced above \$450,000 and those priced just below the average also posted growth. That higher-end homes are selling well comes as no surprise given the reported demand for high-end finishes and growth in full-time employment for 45-64 year olds.

Resale Market

St. Thomas continues to be the resale star

MLS® sales through the second quarter in the London CMA posted a marked improvement over the first quarter in a year-over-year comparison. A stronger second quarter yields brighter prospects for 2013 than the first quarter would

Figure 2

have led one to believe. However, while improved, second quarter results revealed that a slow first quarter did not lead to a substantial amount of pent-up demand.

The sales-to-new-listings ratio remains in balanced territory as sales picked up from the slow first quarter and listings broke the downward trend of the preceding four consecutive quarters. In a balanced market environment, demand and supply driven price pressures are limited.

The average MLS® price increased marginally in the second quarter over the year prior. Strong sales of homes priced in the \$300,000-\$350,000 range are placing upward pressure on the average. However, these effects are not as strong as in the first quarter where high-end home sales, those priced above \$500,000, were the best performing segment of the resale market in per cent growth terms.

Aside from a slow June, the St. Thomas market has been the star of the MLS® market in 2013. The London and St. Thomas Association of Realtors (LSTAR) reported that

year-to-date MLS® sales in St. Thomas have increased by 18 per cent in 2013 with average prices increasing by less than one percentage point indicating a market in balance. Sales growth in St. Thomas came from single and semi-detached home sales. Single-detached homes in St. Thomas are an attractive option for many buyers due to the 30 per cent lower price relative to the average single-detached home in the CMA. Semi-detached homes in St. Thomas are priced in line with the CMA average for semi-detached units. The St. Thomas semi-detached market in St. Thomas appears to be a seller's market (albeit a niche) with homes on the market for fewer days than last year and year-to-date price increases of approximately two per cent. The average MLS® price in the CMA for a semi-detached unit was flat by the same comparison.

Rental Market Demand Grows in London

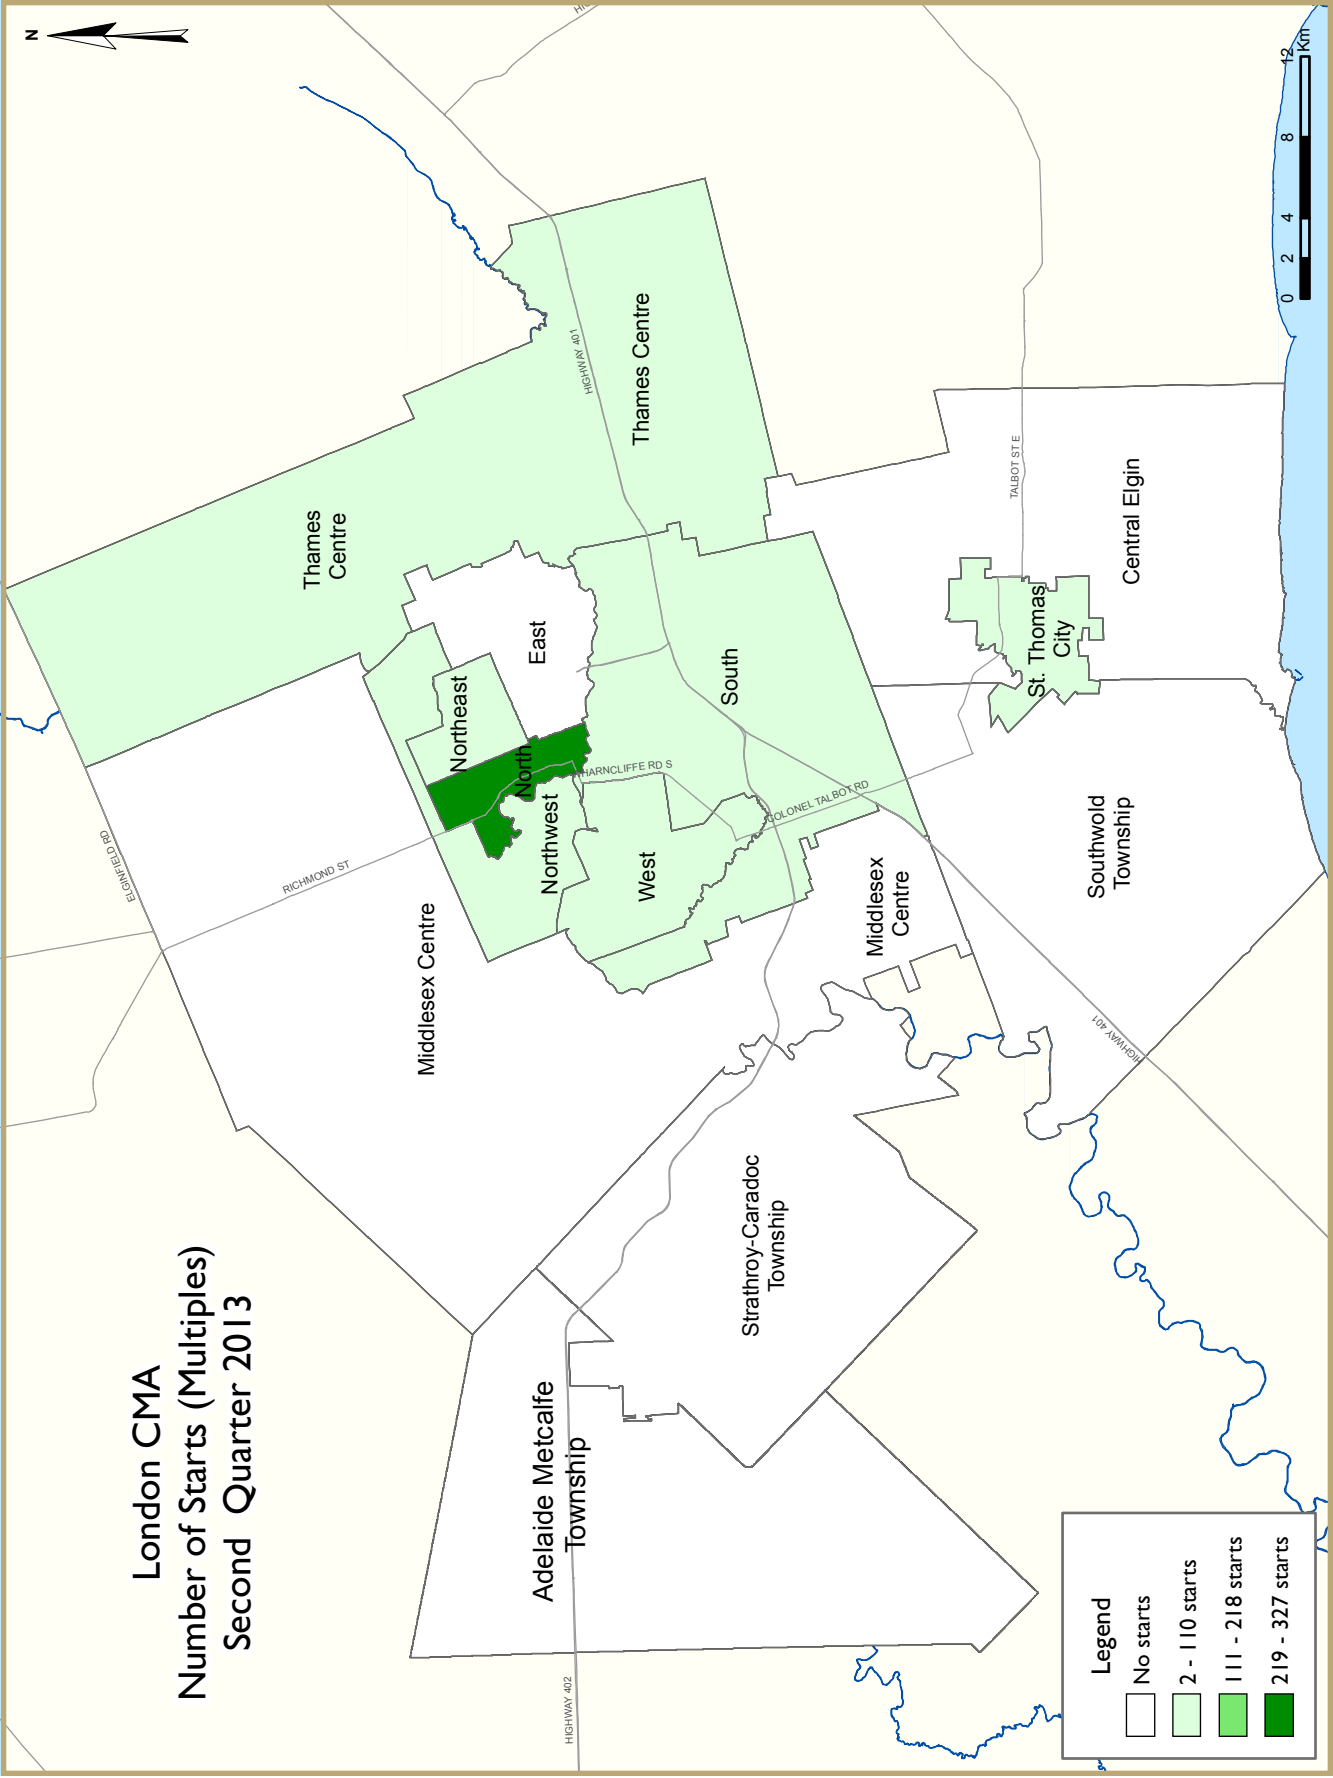

The Spring Rental Market Report revealed that London's rental market continued to tighten with average vacancy rates falling by half of a percentage point as compared to the 2012 survey to 3.1 per cent. Lower vacancy rates are a demand story, particularly for two-bedroom units. In Southwestern Ontario, only Windsor had stronger growth in demand as can be seen in Figure 3. In London, increased rental demand can partially be attributed to jobs gains by young people through the first half of 2013, particularly in accommodation and food services and the trade sector.

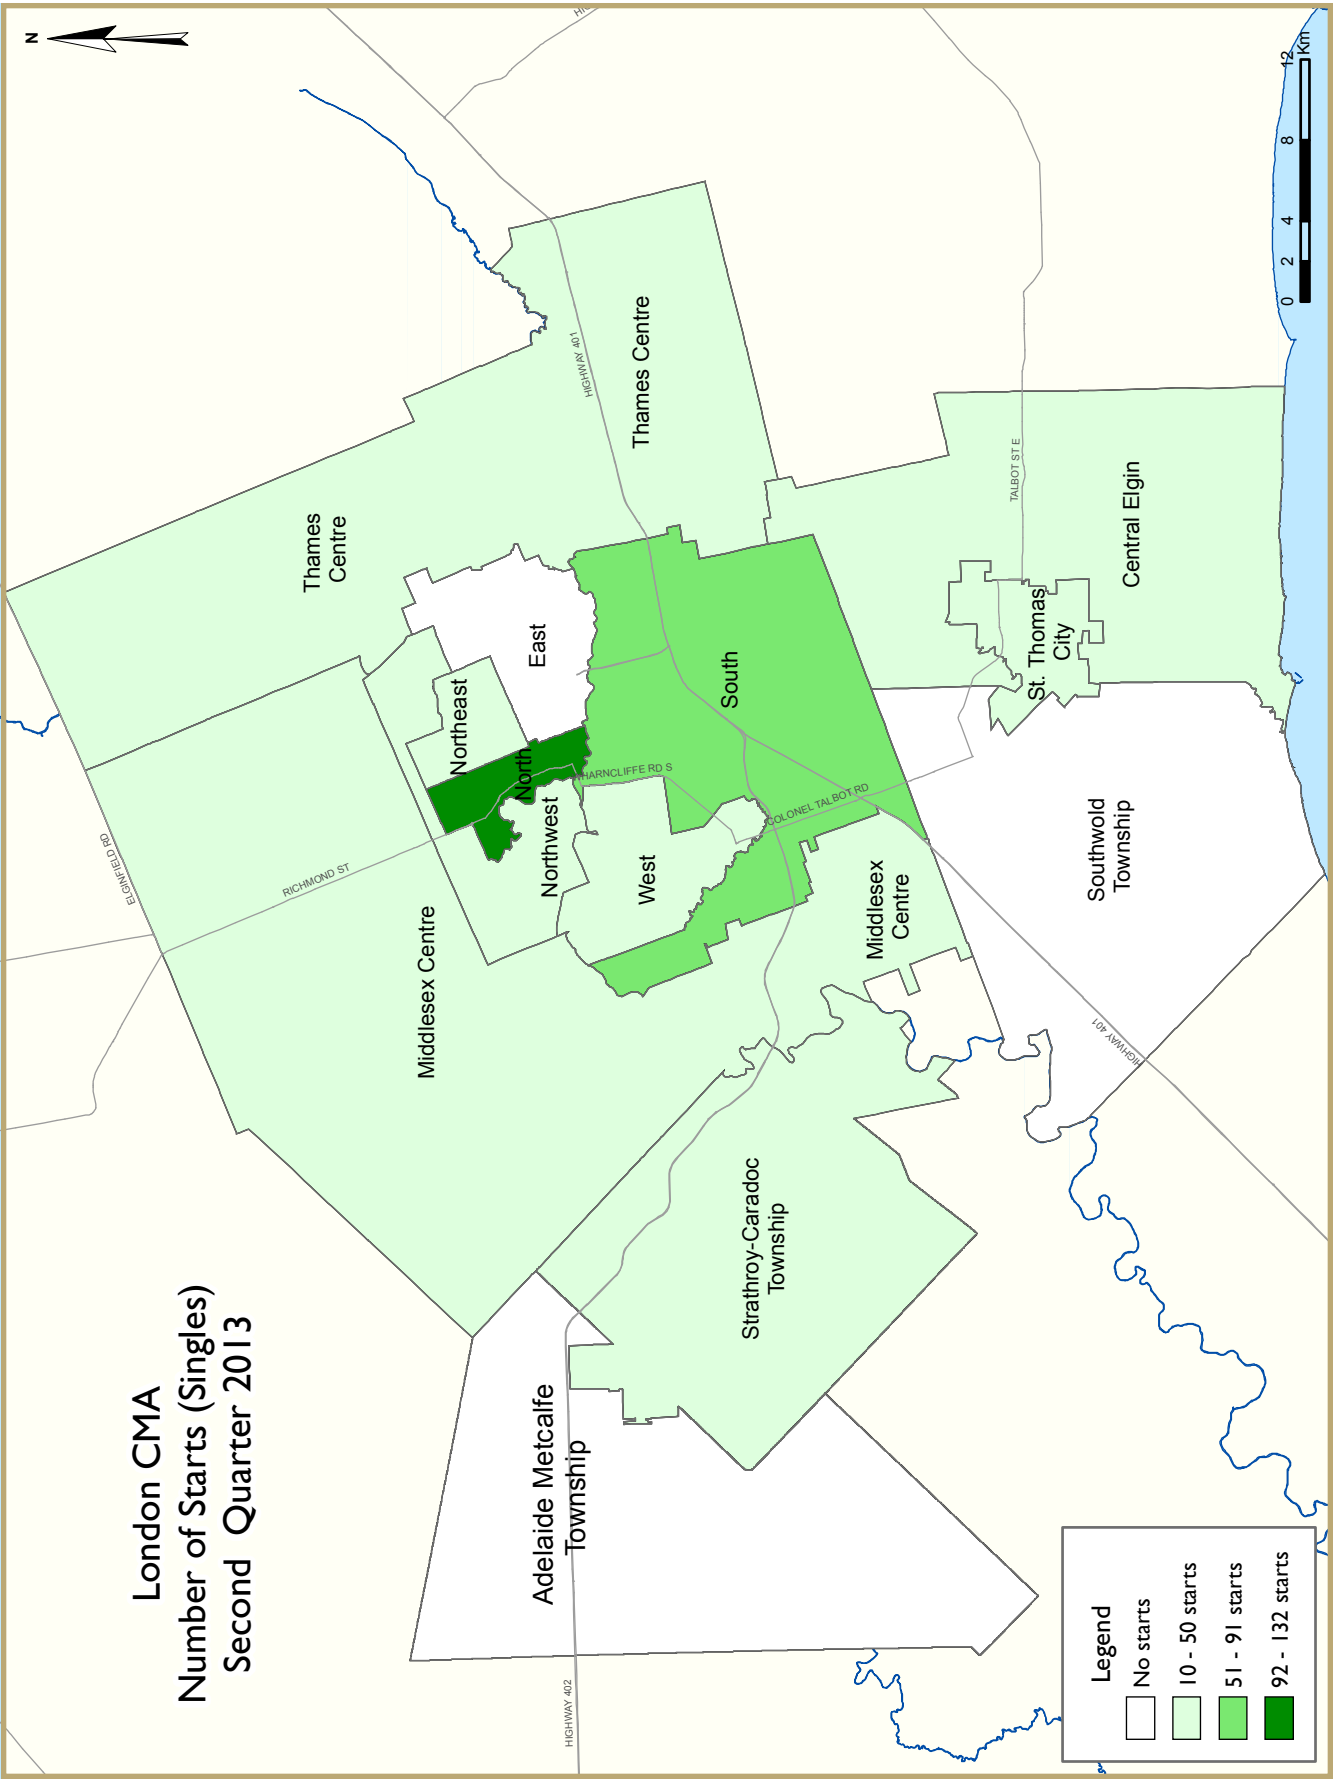

Accommodation and food services job growth can be linked back to London hosting the World Figure Skating Championships, and a second strong consecutive year of London Knight playoff hockey. These job gains would

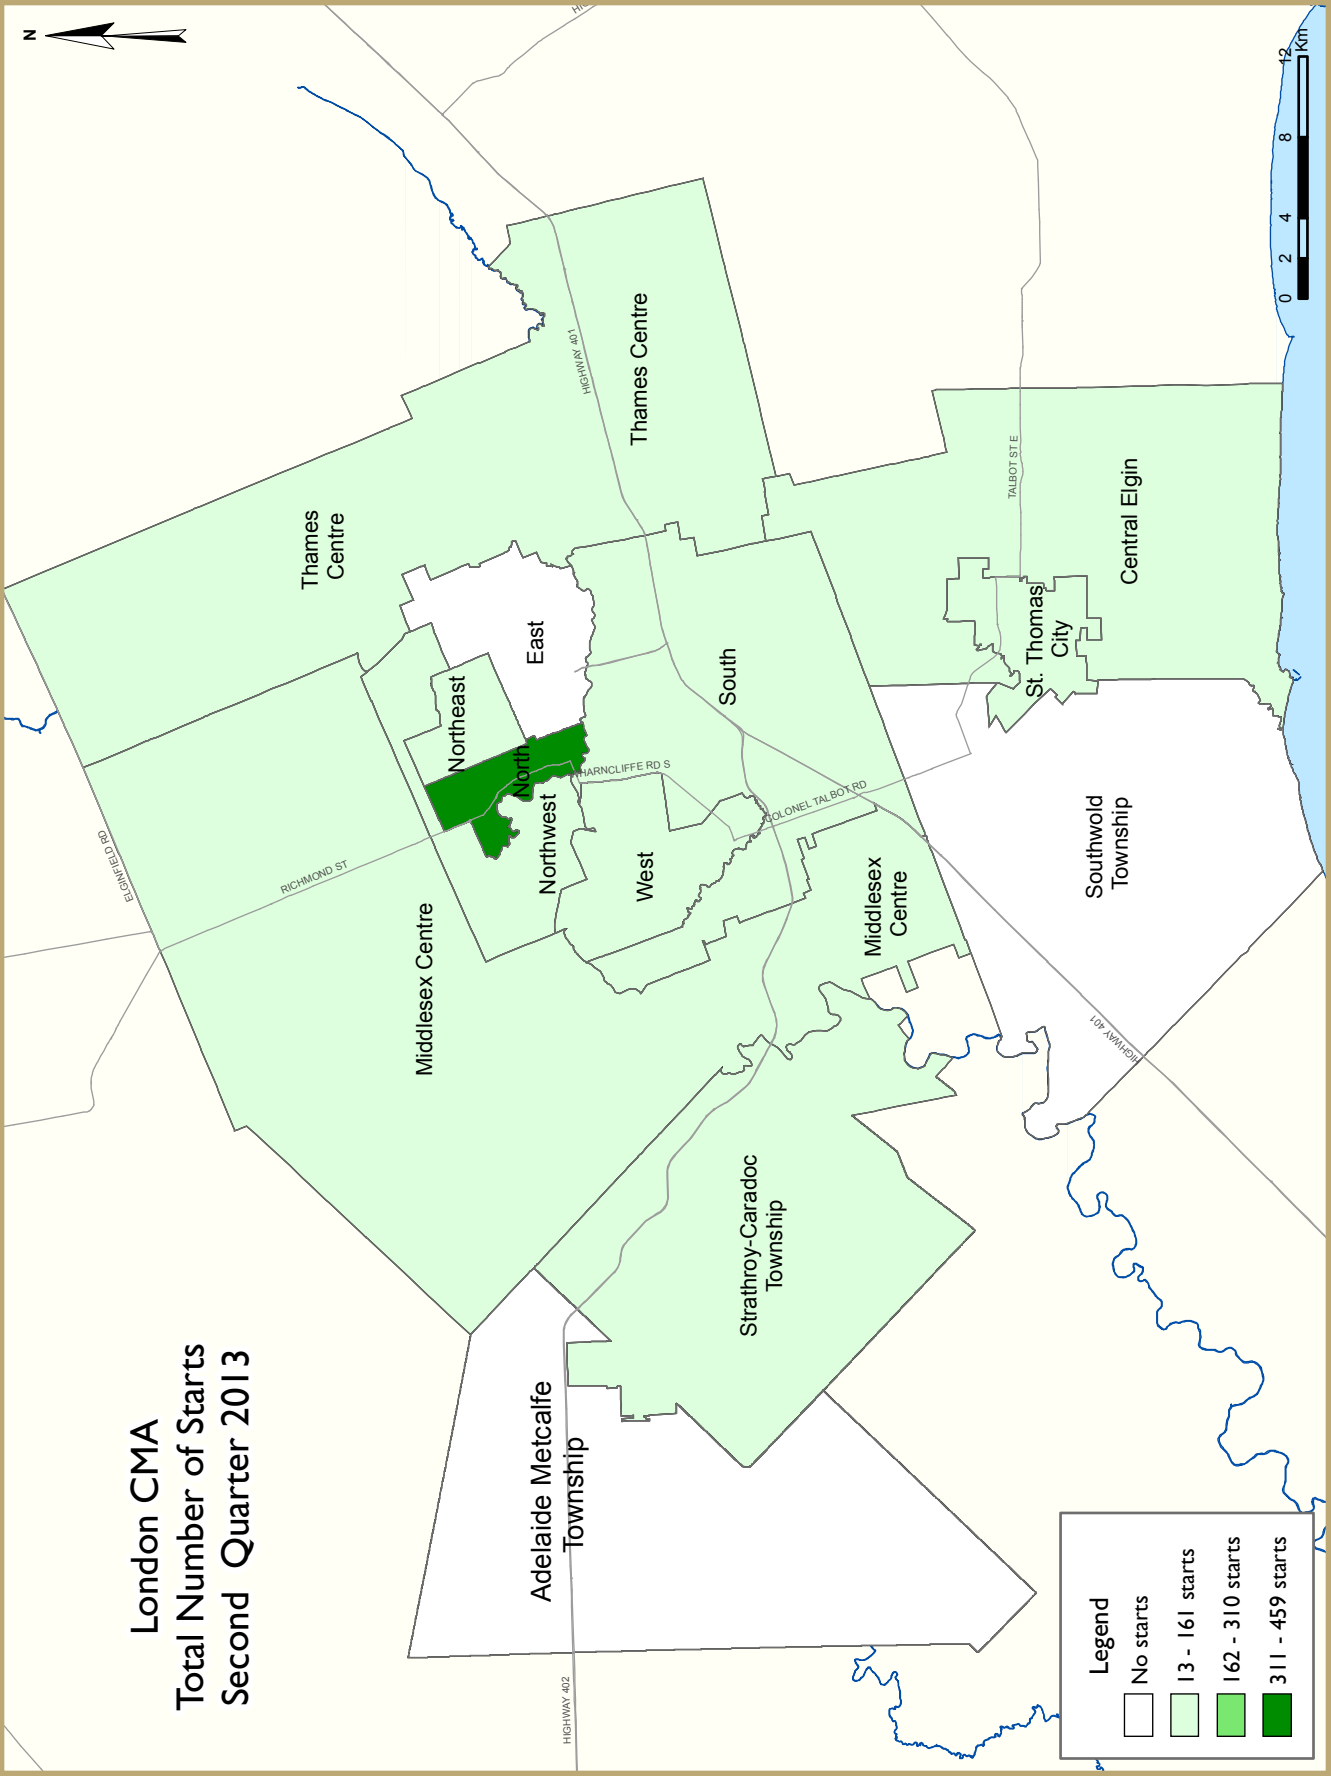

Figure 3

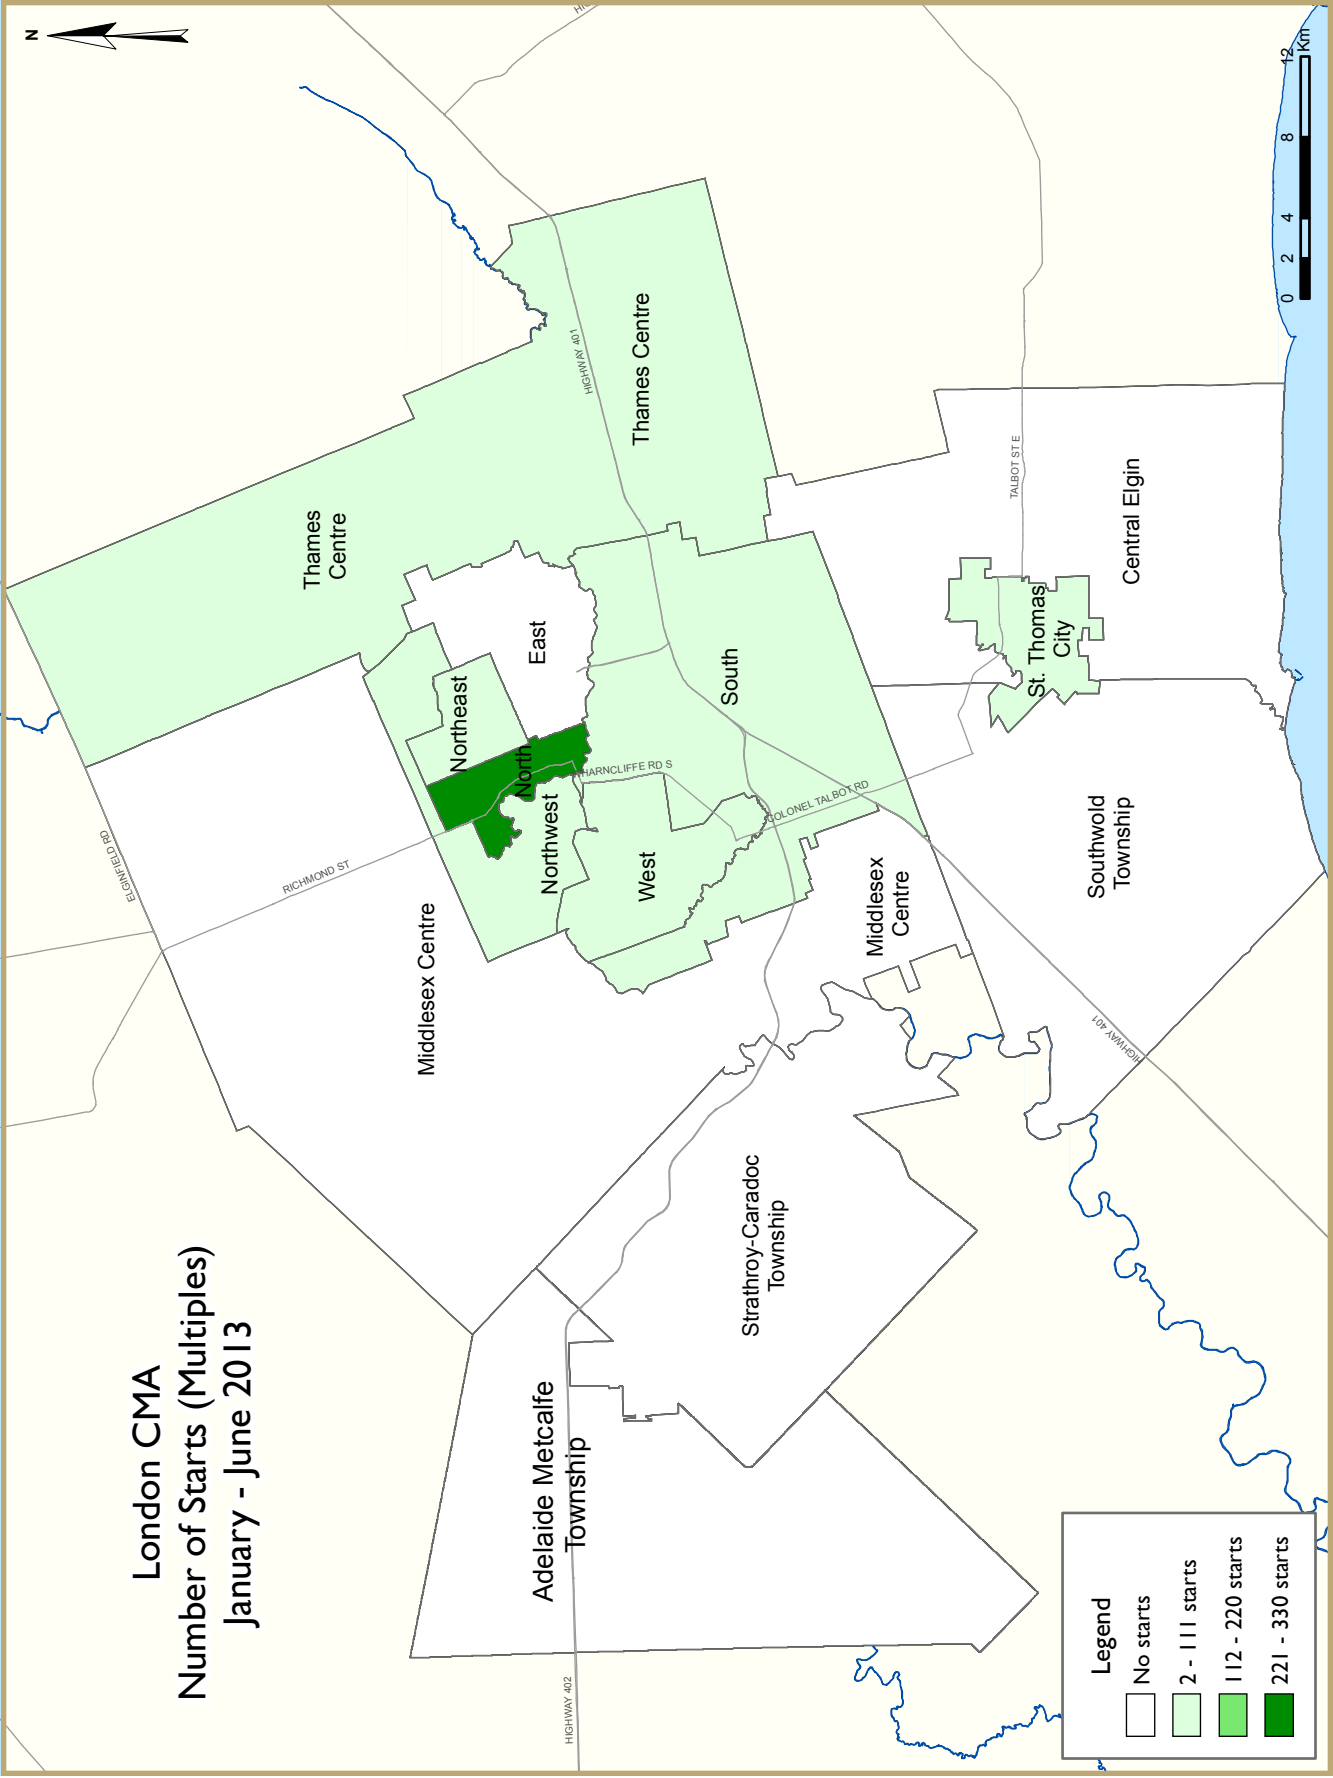

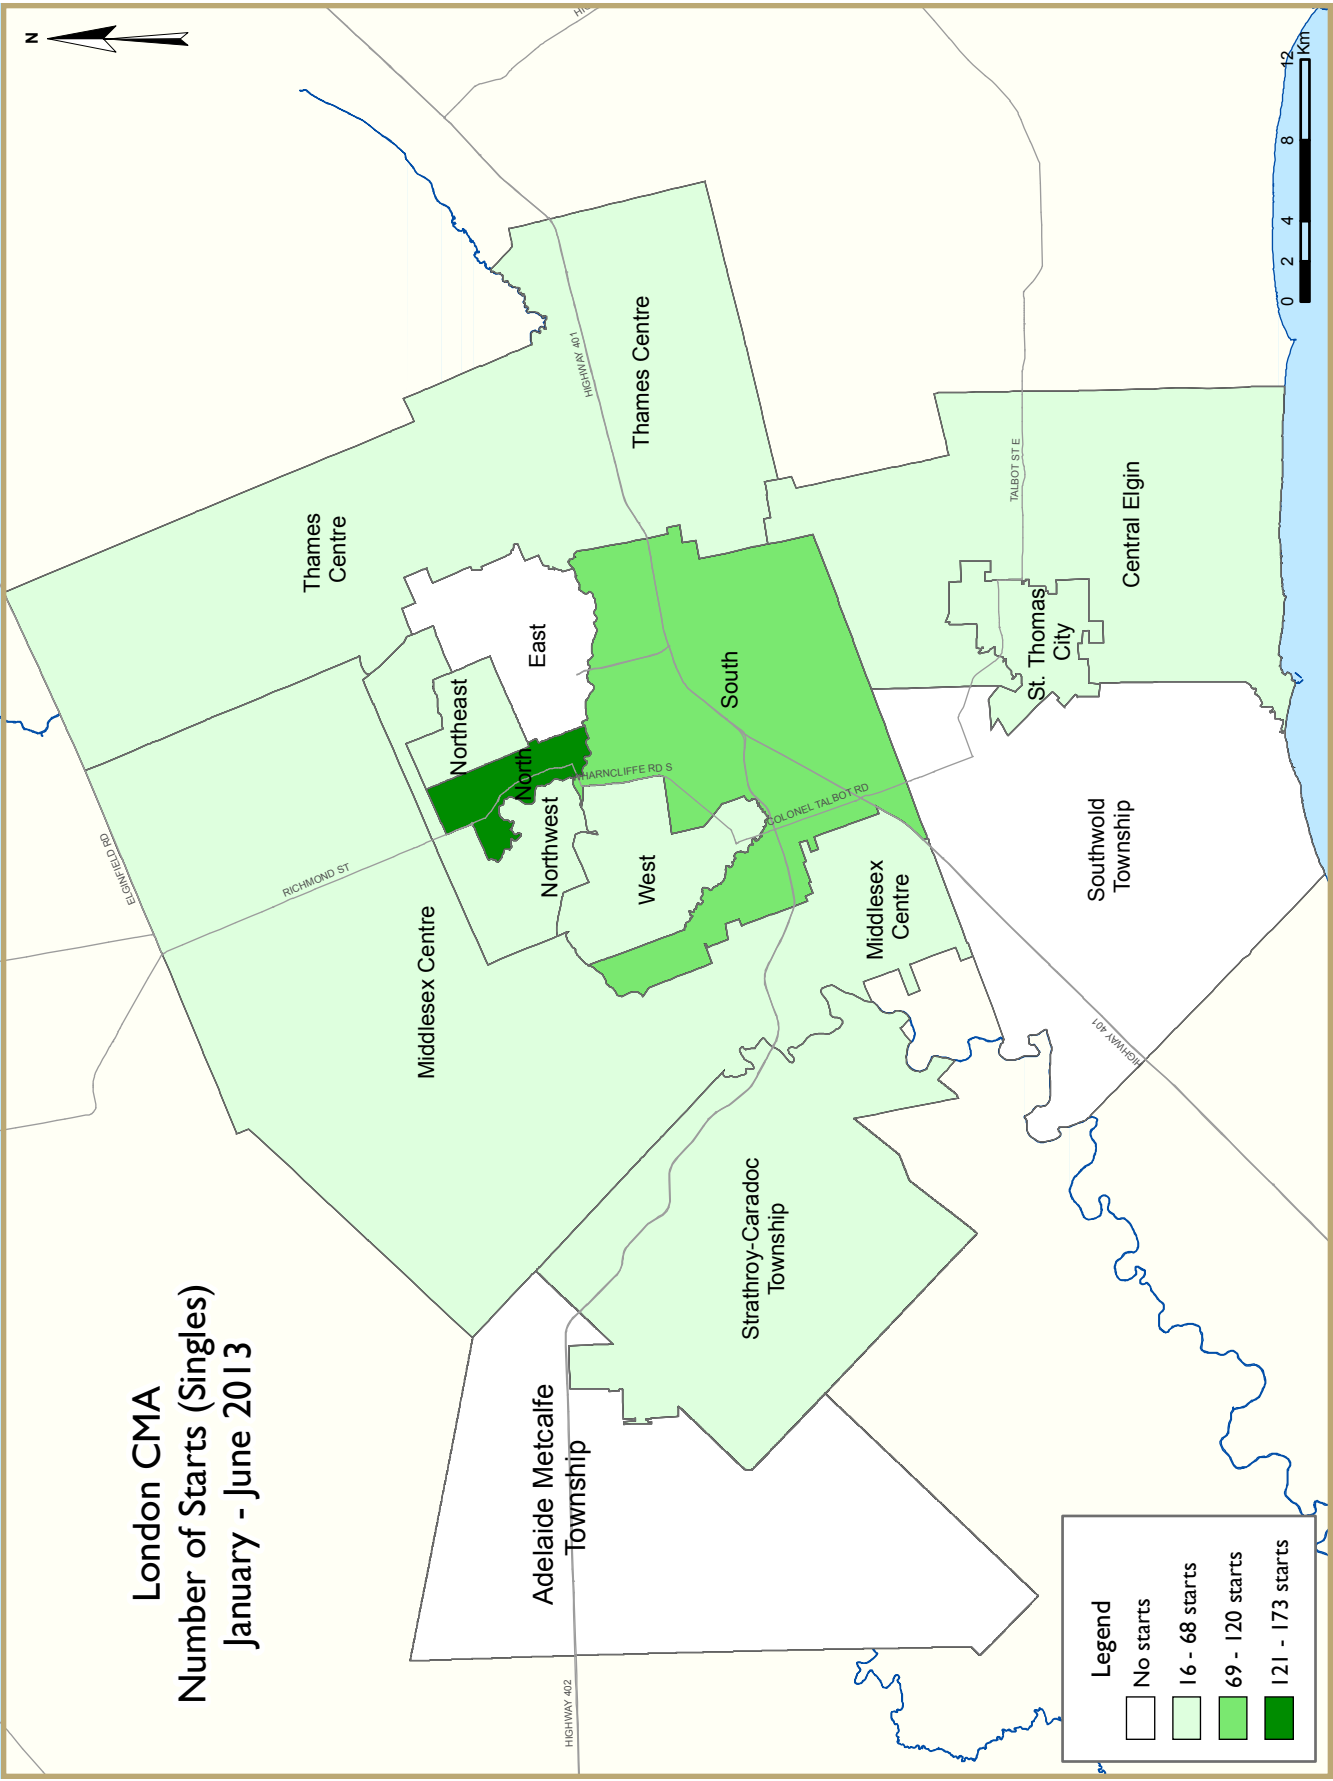

allow some younger Londoners to form households, whether they be roommates or couples, leading to higher demand for two-bedroom apartments.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
