#### HOUSING MARKET INFORMATION

# HOUSING NOW Greater Sudbury CMA

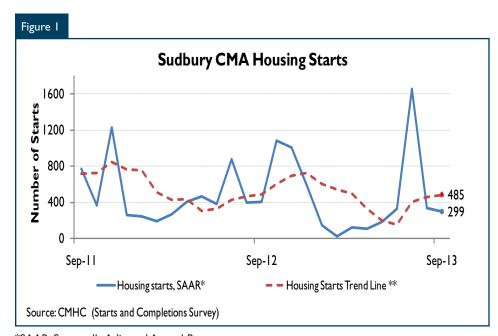

CANADA MORTGAGE AND HOUSING CORPORATION

#### Date Released: Fourth Quarter 2013

#### **Highlights**

- Year-to-date housing starts to September of 2013 finished close to 2012 level for the same period.
- Declining supply of existing homes has helped to balance the resale market despite slower sales.
- Year-to-date average MLS® price grew at a slower pace than last year, though increasing by 2.3 per cent.

<sup>\*\*</sup>The trend is the six month moving average of the monthly SAAR1 for housing starts.

<sup>&</sup>lt;sup>1</sup> SAAR is a monthly figure for starts adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

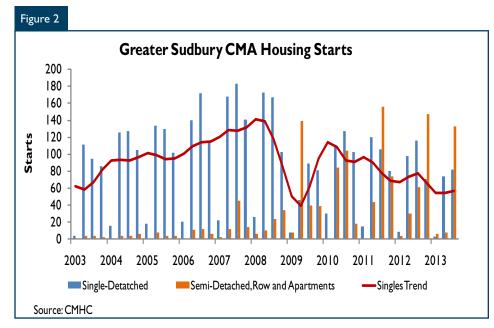

#### **New Home Market**

# New Construction Gained Momentum In Third Quarter

Housing starts in the Greater Sudbury Census Metropolitan Area (CMA) were trending at 485 units in September. The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. The trend edged up higher in September still carrying the effect of a strong month for construction of multifamily housing in July. However, due to inherent volatility in multiple starts, this trend is not expected to sustain in the last quarter of 2013.

Greater Sudbury's starts activity saw large gains in the third quarter of 2013. The number of starts in third quarter of 2013 exceeded last ten years' average for the same period by 21 percent. This increase was mainly the result of multifamily new construction fuelled by the start-up of an apartment project and the resurgence of semi-detached dwellings.

There were 352 multi-family units under construction in September of this year as compared to 258 units for the same period last year. Similarly, 37 semi-detached, row and apartment units were completed during third quarter of this year as compared to 20 units for the same period last year. Although Greater Sudbury's employment conditions have improved in the last quarter, average weekly earnings decelerated. Though lingering very close to Ontario average, this deceleration of average income might

have driven some households into the more affordable multi-family homeownership tenure.

## Single-family homes construction activity remained stable

Eighty-two new single-detached homes kept new construction active in third quarter following same trend as second quarter. However, year-to-year singles starts were lower by 40 percent as compared to same period last year. Despite slower pace of construction to September, the year-to-date average price of newly completed single-detached homes in Greater Sudbury has increased by 11 percent from same period last year to \$427,365.

Most of the gain in employment was recorded in 45-64 years age cohort producing 3,700 jobs in last 12 months. The unemployment rate for this age cohort has declined to 4.3

percent in the third quarter from 6 percent for the same period last year. This positive trend was reflected in the demand for more spacious yet more pricey single-detached homes as 2013 housing market activities were dominated by move-up buyers traditionally represented by 45-64 years age cohort.

In other Northern Ontario centres, Timmins saw large surge in starts activity in the third quarter registering 39 starts as compared to 3 starts in the second quarter. Housing starts in North Bay and Sault Ste Marie kept same pace as second quarter and recorded 24 and 30 housing starts respectively in the third quarter. Nevertheless, year-to-date total starts for these three cities are lower than same period last year with North Bay having the largest decline of 48 percent.

## Existing Home Market

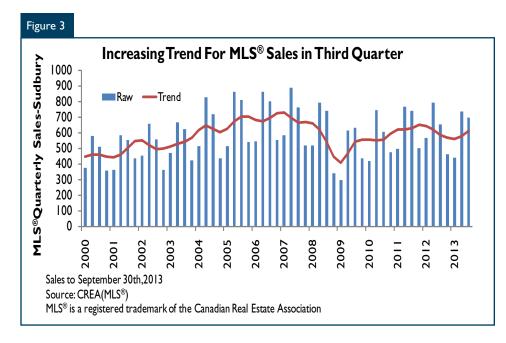

#### MLS<sup>®</sup> Sales in Sudbury Kept a Steady Pace

Sudbury's third quarter MLS® sales kept a steady pace from the previous 3 months with six hundred ninety seven units sold in the third quarter or 6 percent higher than the same period last year. Although the yearto-date sales were 5.6 percent lower than same period last year, the number of units sold in the third quarter of 2013 was above ten years' average. Stronger employment, decelerating resale home prices and anticipation of long-term interest rate increases have sparked the activity in the resale market in the last two quarters.

Seasonally adjusted new listings remained almost unchanged in the third quarter as compared to previous quarter. Higher sales and stable level of listings have helped overall sales-to-new listing ratio in Greater Sudbury to remain at 53 percent in the third quarter, a slightly warmer level from the second quarter. Nevertheless, downward pressure remains on the demand side resulting in the deceleration of price increases. Other factor causing a slowdown in the price is the exhaustion of demand from move-up buyers.

## Existing homes' price increased above inflation

Although year-to-date average MLS® price increased by 2.3 percent as

compared to same period last year, it posted a slightly higher increase than the rate of inflation. Sudbury's labour market has shown resilience by creating 2,900 jobs since the end of third quarter of 2012. The seasonally adjusted unemployment rate has dropped to 6.9 percent from 7.5 percent at the end of previous quarter. Additionally, most of the gains in employment were recorded in the full time employment, which is a supporting factor for the housing demand.

Resale market saw growth in rest of Northern Ontario (North Bay, Timmins and Sault Ste Marie) in the third quarter. Seasonally adjusted MLS® sales increased by 8 percent in the third quarter for both North Bay and Timmins as compared to second quarter. Sault Ste Marie posted 12 percent quarterly increase in seasonally adjusted MLS® sales. This increase in demand did not help

to improve this region's seasonally adjusted sales-to-new listing ratio. There was an upward pressure on the supply side as seasonally adjusted new listings for Sault Ste Marie and North Bay increased by 3 percent and 7 percent respectively in the third quarter keeping sales-to-new listing ratio close to 50 per cent range.

Accelerated demand with stable supply of resale units led to 5 percent increase in year-to-date average MLS® price in Timmins as compared to same period last year, followed by Sault Ste Marie with 4 percent increase. North Bay's year-to-date average MLS® price registered only 2 percent year-to-date growth.

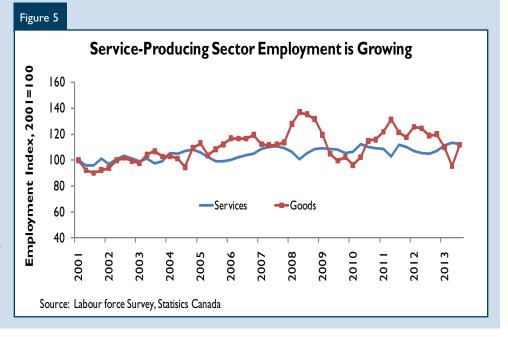

#### Gains in Service-producing Sector Stabilizing overall Employment Levels

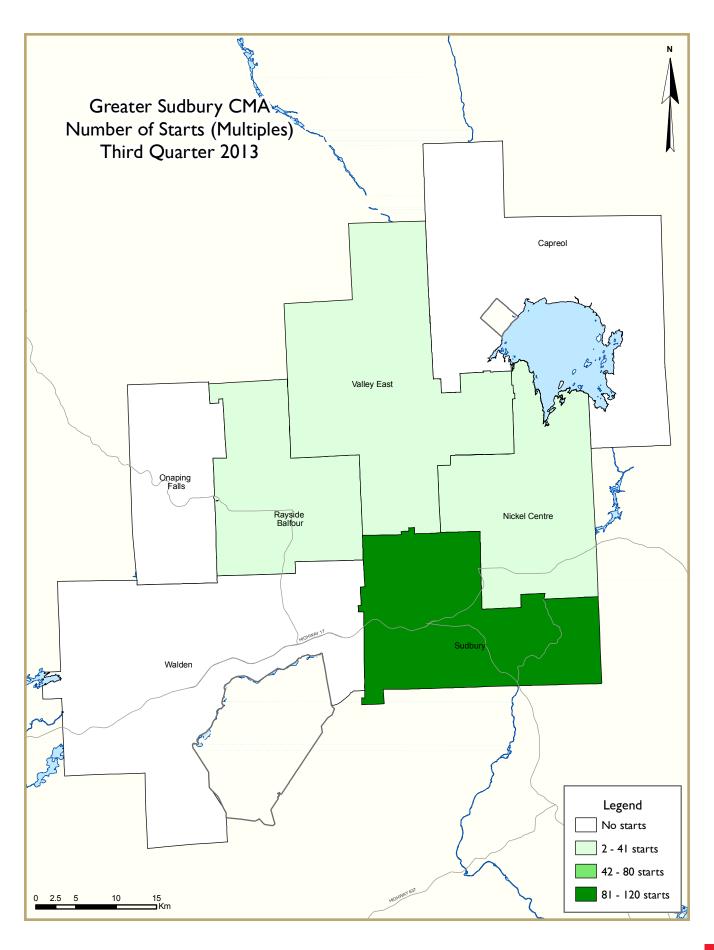

Service-producing sector employment index in Greater Sudbury gained momentum since October of last year and is currently at the highest level in the last ten years. Major contributors to this gain in employment were wholesale trade, health, public administration and finance, insurance and real estate. However, the decline

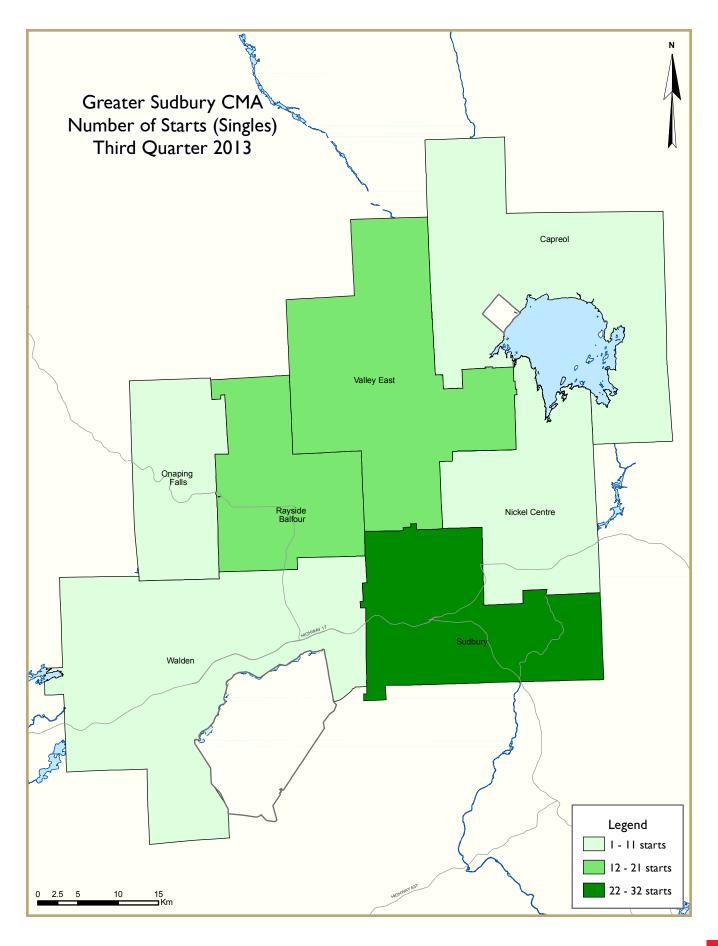

in employment in education sector in the last two months of third quarter stalled its growth.

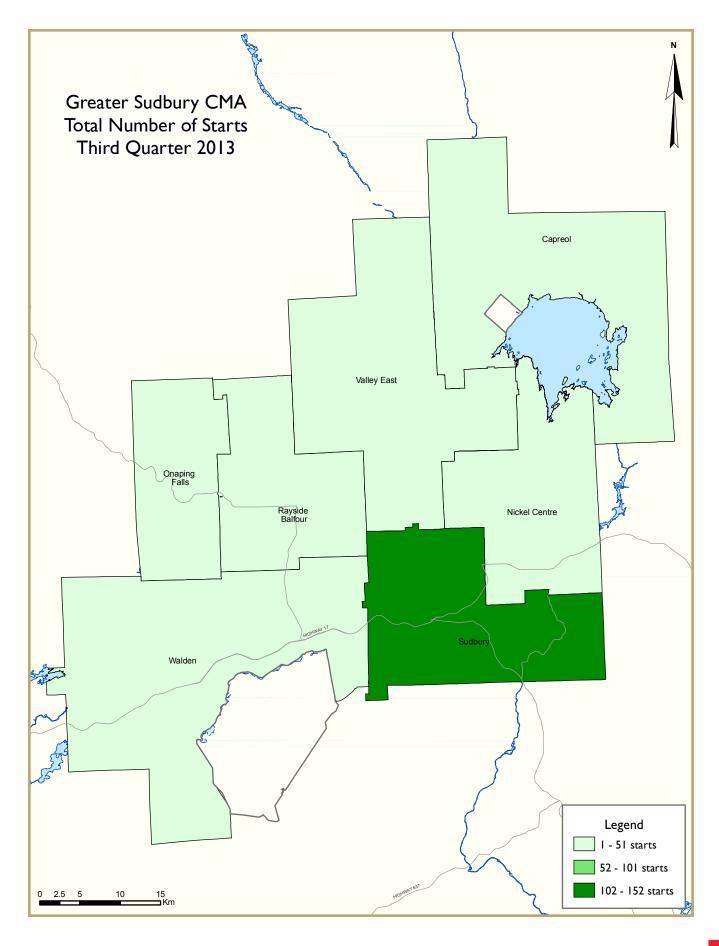

Seasonally adjusted unemployment rate for service-producing sector is also on a decline, dropping to 3.9 percent in the third quarter, which is the lowest since November of last year. Conversely, seasonally adjusted unemployment rate for goods-producing sector is at 5.5 percent. Notably, the employment index for goods-producing sector has recovered in the third quarter after declining in the first two quarters of 2013.

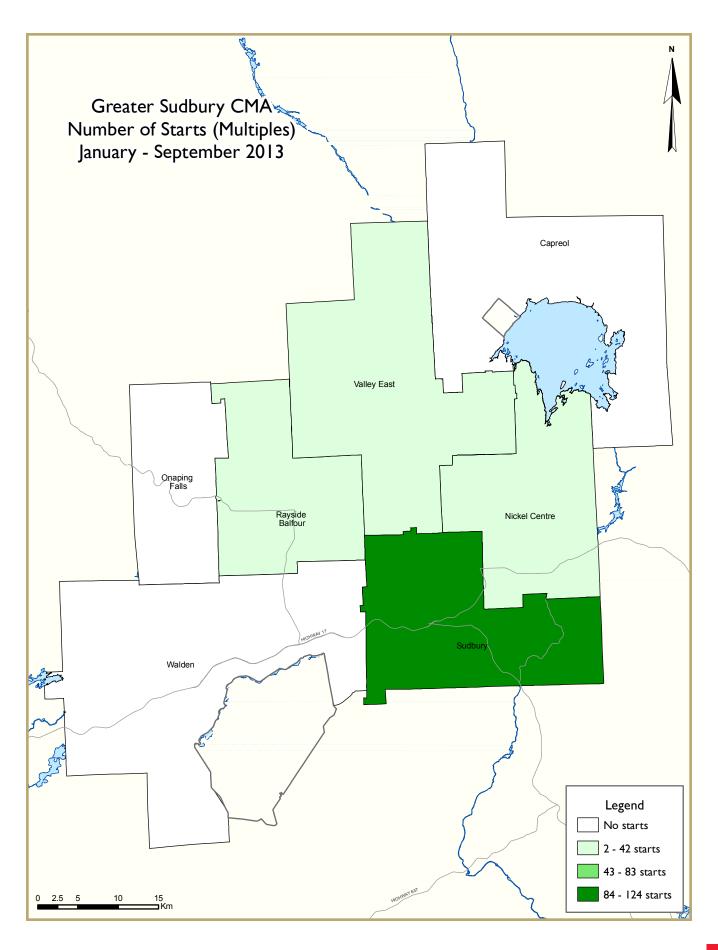

The diverging trends in employment in goods-producing and service-producing sectors have helped stabilize overall employment levels in Sudbury. After peaking to 8.1 percent in February 2013, seasonally adjusted unemployment rate in Sudbury started to decline and ended third quarter at 6.9 percent.

<sup>&</sup>quot;NHPI" means New Housing Price Index

<sup>&</sup>quot;CPI" means Consumer Price Index

<sup>&</sup>quot;SA" means Seasonally Adjusted

#### METHODOLOGY

#### **Starts & Completions Survey Methodology**

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

#### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

### STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

#### **DWELLING TYPES:**

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

#### INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

#### **GEOGRAPHICAL TERMS:**

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

#### CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
