

HOUSING NOW

Windsor CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2013

New Home Market

Housing starts in the Windsor Census Metropolitan Area (CMA) continued trending lower in the first quarter of 2013. The lack of townhouse construction this year compared to first quarter activity in 2012 was the main factor causing the decline. Single-detached starts were lower in all of the five submarkets of the CMA. Although moderately lower,

first quarter single-detached starts remained above the average for the first quarter for the last six years.

One contributing factor to the slower pace of new residential construction has been the variation in weather between the first quarter of 2013 and the first quarter of 2012. Last year was significantly milder. This had two positive impacts; it provided more days conducive to construction and

helped provide a positive mindset for potential homebuyers. In comparison the first three months of this year saw significantly colder and snowier weather, resulting in delays in construction and deferrals in potential buyers shopping for homes.

First-time buyers continue to be active in the new single-detached home market as indicated by the distribution of single-detached starts. Windsor City, which has the most affordably priced new single family homes increased its share from 33 per cent of single starts in the first quarter of 2012 to 42 per cent in the first quarter of 2013. More than half the homes sold in the City were under \$250,000, and buyers had a variety of affordable options as just over a quarter of the homes sold for under \$200,000. LaSalle and Lakeshore continued to be the preferred location for move-up buyers due to the availability and range of selection among the larger lots and homes as reflected in the higher average price.

Resale Market

Pace of sales picks up as new year begins

Existing home sales in Windsor-Essex were higher in the first quarter of 2013 on a seasonally-adjusted basis.

Figure 2

Before seasonal adjustment, sales were slightly lower than first quarter 2012 sales, but were above the long term average of 1,100 sales for a first quarter in Windsor-Essex. At the same time, the number of homes available for sale continued to trend down. The result was a higher sales-to-new listings ratio, indicating market tightening. Some realtors have noticed an increase in bidding wars for choice properties which contributed to the average price gaining four per cent quarter over quarter. Despite the recent tightening, the market remains balanced with some popular areas beginning to favour sellers.

As the economic recovery in the U.S. strengthens, there will be positive

spinoffs which benefit the Windsor economy. Growing demand for autos and related parts will raise local employment. Anecdotal evidence shows Windsor's Mold, Tool and Die-Making (MTDM) sector is working at full capacity. The unemployment rate in the Windsor CMA declined throughout the first quarter, dropping to 9.0 per cent by March, the lowest since August 2011.

Net Migration Turns Positive As Economy Expands

Windsor's higher-than-average economic dependence on the manufacturing sector for employment means that during an economic downturn, people find it especially challenging to find employment. As such many relocate in search of work. Consequently, Windsor has struggled with declining population levels as people moved away from the area in search of better employment opportunities.

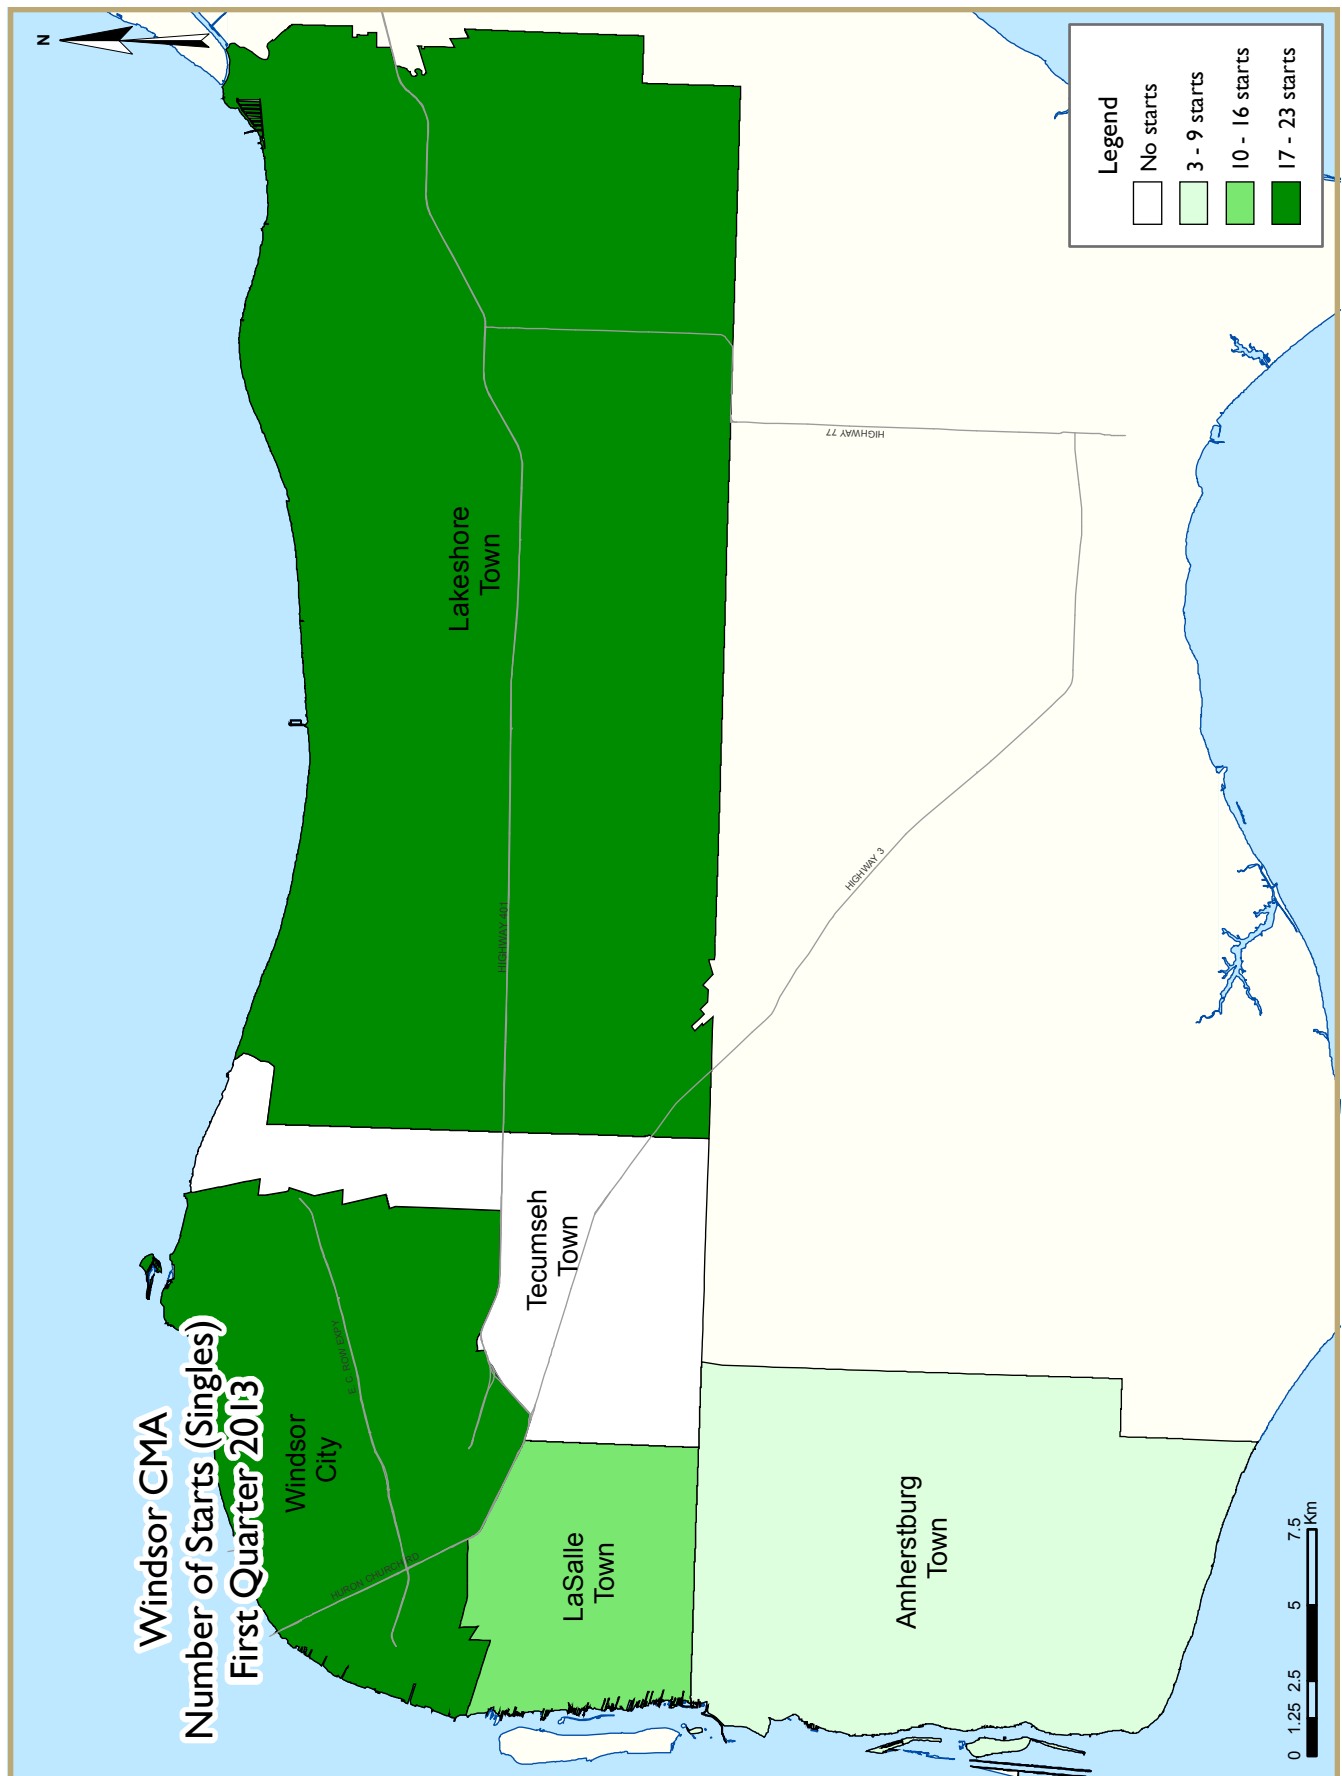

The exodus of people leaving the Windsor CMA over the past ten years peaked in 2008 as the local economy was in the midst of significant job losses. Major infrastructure investments and economic diversification efforts resulting in increased job opportunities have led to growing employment since then. Out-migration lessened and by 2012, net migration had turned positive once again as the number of residents attracted by job opportunities in other provinces dropped to a third of that in 2008

and those moving elsewhere within Ontario was down to a tenth. Windsor compares favourably to other major metropolitan centres when considering factors such as housing affordability.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

On June 1, 2012, CMHC's Market Analysis Centre turned 25!

CMHC's Market Analysis Centre has a strong history as the Canadian housing industry's "go-to" resource for the most reliable, impartial and up-to-date housing market data analysis and forecasts, in the country.

CMHC's Market Analysis Centre e-reports provide a wealth of detailed local, provincial, regional and national market information.

- **Forecasts and Analysis –**
Future-oriented information about local, regional and national housing trends.
- **Statistics and Data –**
Information on current housing market activities – starts, rents, vacancy rates and much more.

Affordable Housing Web Forums

CMHC's Affordable Housing Web Forums are distance-learning seminars that bring interested participants and industry experts together using phone and web technology. You can participate, listen, see and learn without the expense of travelling.
