^{**}The trend is a six-month moving average of the monthly SAAR.

¹The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing Starts Continue Upward Trend In Third Quarter

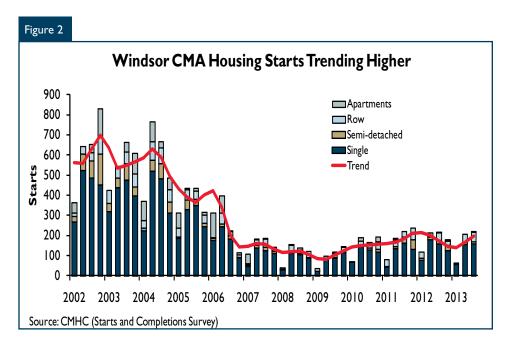

Housing starts in the Windsor Census Metropolitan Area (CMA) trended higher, at 732 units in September 2013 compared to 567 in June. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. The trend increased due to an increase in single-detached, townhouse and apartment starts. For the first three quarters of this year, housing starts are down close to ten per cent due to fewer single-detached and semi-detached homes being built.

A total of 221 units were started in the third quarter of 2013, up four per cent from the 213 units in the third quarter of 2012. Although single-detached construction remained unchanged, the increase in townhouse construction boosted the starts. Semi-detached construction moved slightly lower, while apartment starts marginally increased.

Windsor City starts increased strongly in the third quarter driven by increased starts in all categories, most significantly townhouses.

Starts also increased in the towns of Amherstburg and Tecumseh.

Stable employment, immigration, and the relative affordability of housing in the Windsor CMA supported demand for housing. Employment in the third quarter was supported by gains in the goods-producing sector including construction and manufacturing. Close to three quarters of all housing starts were single-detached homes in the third quarter. Unlike many other CMAs, there is adequate land available for residential construction.

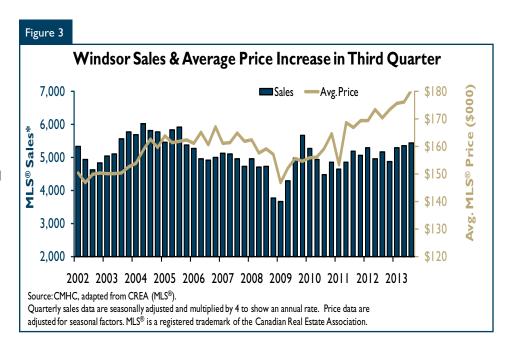

The average price of a new single-detached home increased by just over four per cent in the third quarter of 2013 compared to the same period last year. A significantly higher number of homes were sold in the \$350,000-\$449,999 price range. Home prices increased by more than 20 per cent in the Town of LaSalle, making homes there the most expensive in the CMA. Prices in the City of Windsor increased slightly, while prices in the

towns of Lakeshore and Amherstburg actually fell in the most recent quarter.

Existing Home Market

Strong Sales In Third Ouarter

Residential sales through the Windsor-Essex Association of Realtors® were

trending higher in the third quarter of 2013 on a seasonally adjusted basis. Actual sales figures were the highest for a third quarter since 2005. Sales were driven by a combination of demographic and economic factors, including the relative affordability of homes in the CMA, a growing population and a stable job market with improving full-time jobs.

Many households with locked in preapprovals at lower interest rates were purchasing homes before the preapprovals expired. At this time last year, less conducive mortgage market

conditions tempered sales as firsttime buyer demand declined due to the tightened mortgage rules.

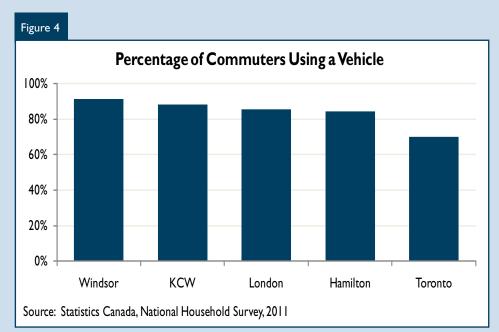

More than 90 per cent of homes sold are single-detached homes, although only 70 per cent of the stock of housing in the Windsor CMA is singledetached homes. Approximately 65 per cent of homes sold for under \$200,000. These more affordable home prices are driving the demand for single-detached homes.

Improved market conditions and rising prices led to a steady stream of new listings. New listings increased from the third quarter of 2012. Homeowners are now listing their homes for sale to take advantage of the rising equity in their homes and move to a home more suited to their needs. With sales increasing at a faster pace than new listings, the sales-tonew listings ratio (SNLR) moved slightly higher. The market is balanced.

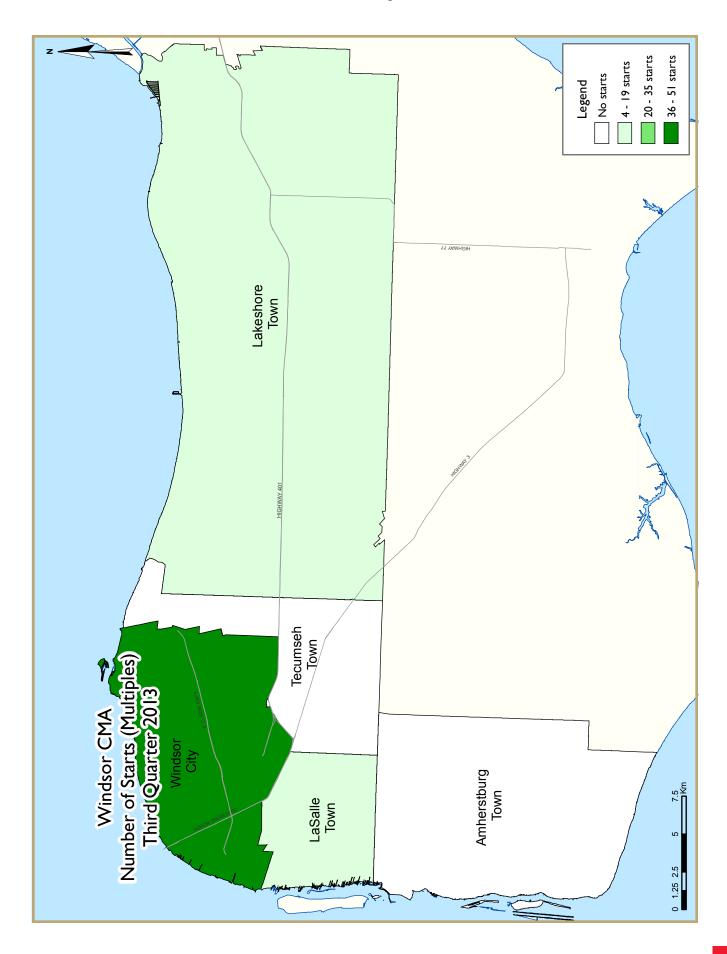

Prices continue to trend higher. Although the market is balanced with little upward price pressures, the average price increased by just below six per cent compared to the third quarter last year.

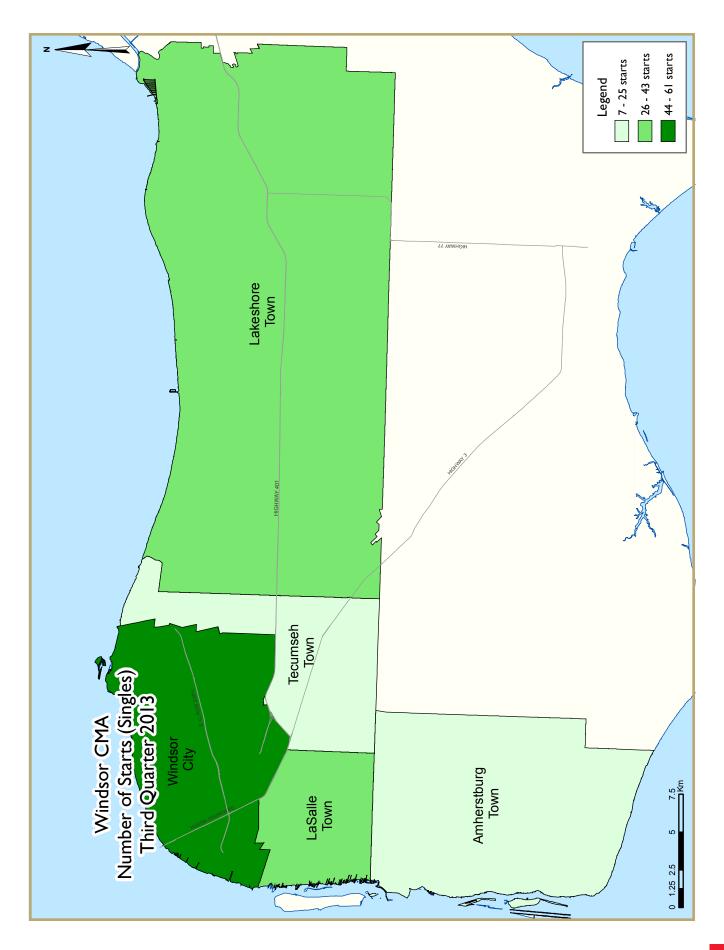

Windsor Commuters Prefer Cars

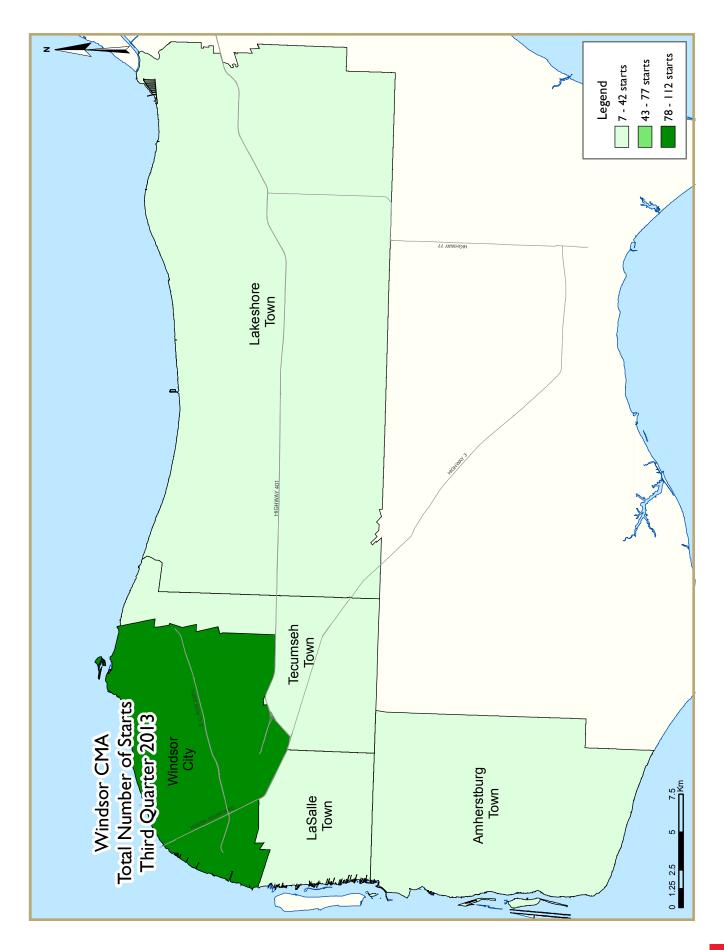

Data released from the 2011 National Household Survey provides insight into the preferences of commuters and commuting time. Within areas in South-Western Ontario and Toronto, a higher percentage of Windsor CMA commuters travel to work by car. More than 91 per cent of Windsor commuters travelled to work by some form of vehicle whether that is a car, truck, or van. What is also of interest is the fact that the average commuting time by car in the Windsor CMA is lower. One factor that contributes to the lower commuting time is that 66 per cent of the population of the

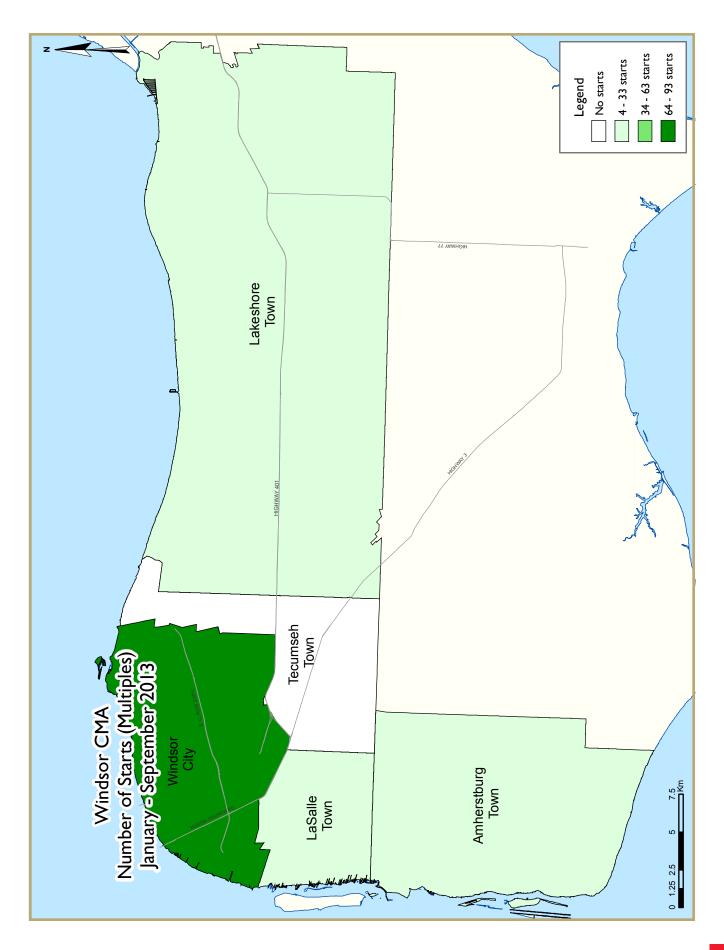

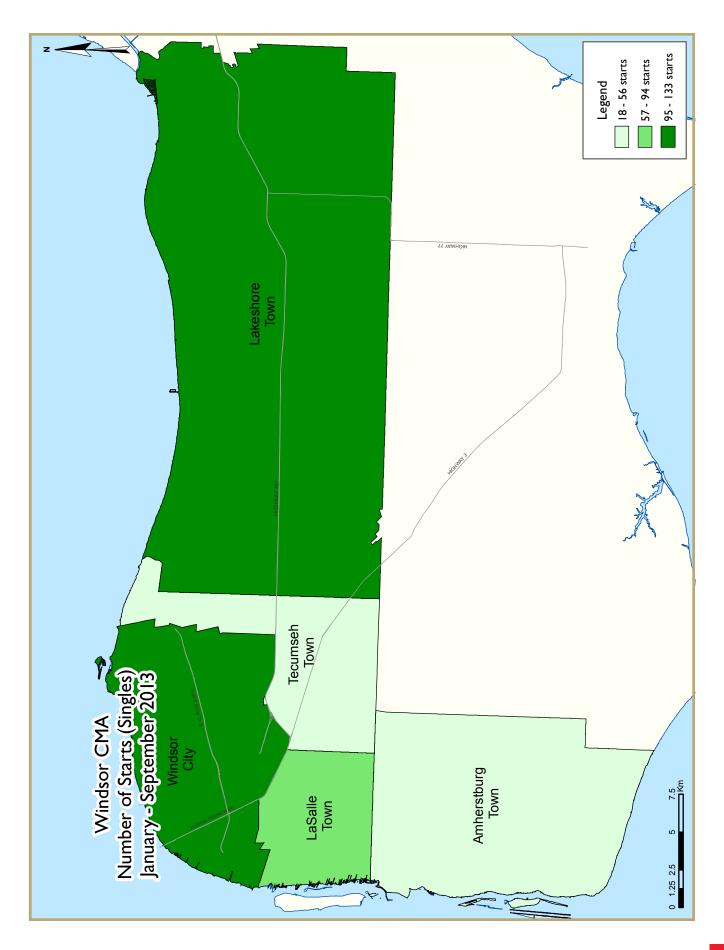

CMA lives within the City of Windsor and live closer to their place of employment.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca or follow us on Twitter, YouTube and Flickr.

You can also reach us by phone at I-800-668-2642 or by fax at I-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.
