Calgary housing starts in February 2013

Housing starts in the Calgary Census Metropolitan Area (CMA) totalled 896 units in February, down 33 per cent from 1,345 units a year earlier. To the end of February, total housing starts declined 24 per cent from 2,131 units in 2012 to 1,615 units in 2013.

Although single-detached construction has increased from the previous year, multi-family construction has moderated, mainly due to fewer apartment starts.

A total of 486 single-detached units were started in February, down one per cent from 490 units in the same month of 2012. Despite the decline, single-detached starts after two months were still up on a year-over-

Source: CMHC

year basis due to the gains in January. There were 927 single-detached starts to the end of February, up 12 per cent from the previous year. Demand for new homes continues to be supported by growth in full-time employment, relatively low mortgage rates and positive net migration.

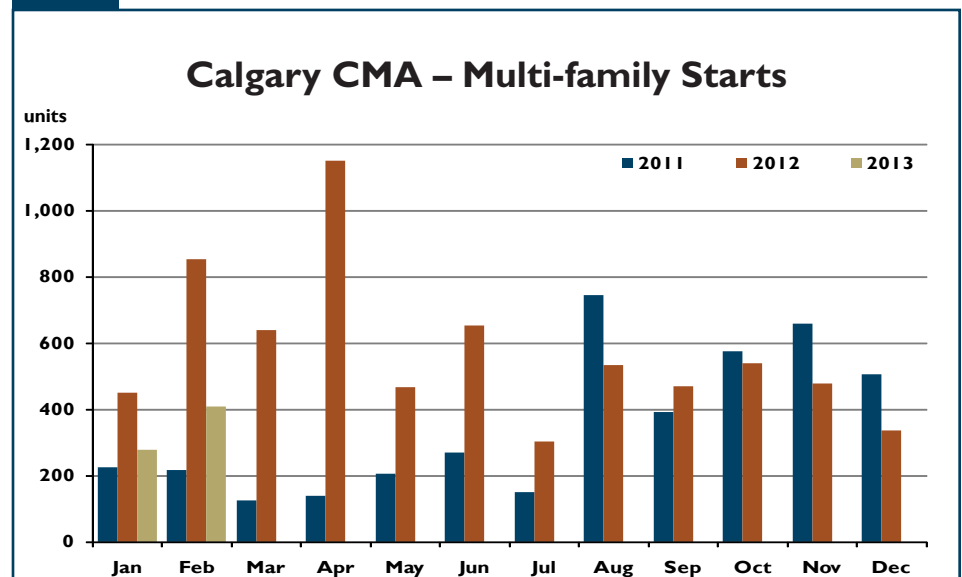

Single-detached inventories were at 426 units in February, a 10 per cent decline from 472 units in the same month a year earlier. A majority of the completed and unabsorbed units were showhomes at 304 units. Spec homes amounted to 122 units in February, down 32 per cent from February 2012. With single-family listings in the resale market on a downward trend, some buyers have looked to new homes that are immediately available to satisfy their housing needs. The decline in inventories has also provided home builders an opportunity to increase single-detached production.

The average absorbed price for single-detached units in February was \$570,490, up seven per cent from \$531,457 in 2012. The proportion of homes absorbed in the highest price range had contributed to the increase

in the average price. The proportion of homes absorbed at \$650,000 and higher was 22 per cent in February 2013, up from 17 per cent in February 2012. To the end of February, the single-detached absorbed price averaged \$543,743, a four per cent decline from the previous year.

Multi-family starts, which include semi-detached units, rows and apartments, declined 52 per cent to 410 units in February 2013 from 855 units in February 2012. As was the case in previous months, the year-over-year decline in multi-family construction was largely due to fewer apartment units breaking ground. There were 205 apartment starts in February compared to 634 in the same month a year earlier. Semi-detached and row units reached a combined total of 205 units in February, down from 221 units in February 2012. Year-to-date, multi-family starts were at 688 units in 2013, down 47 per cent from 1,305 units in 2012.

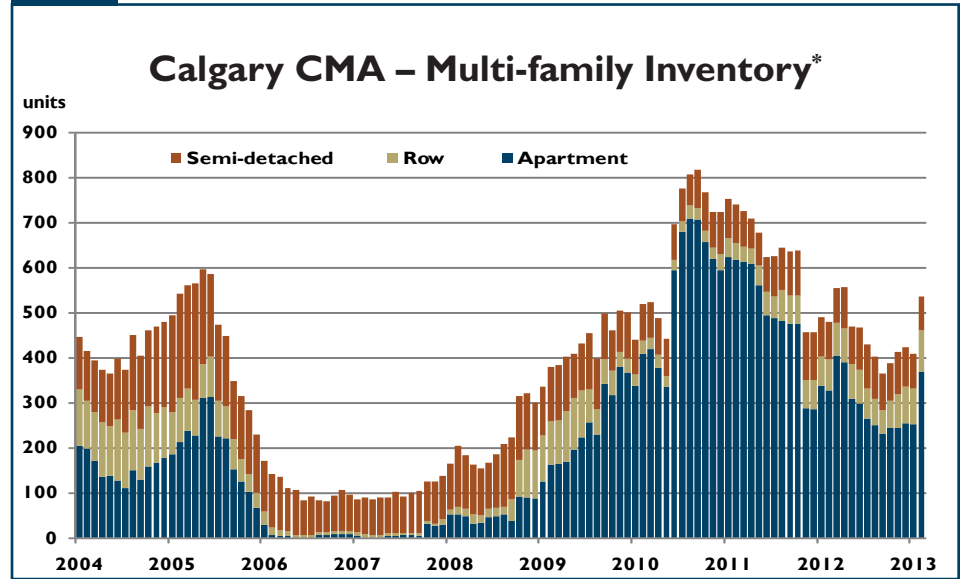

Figure 3

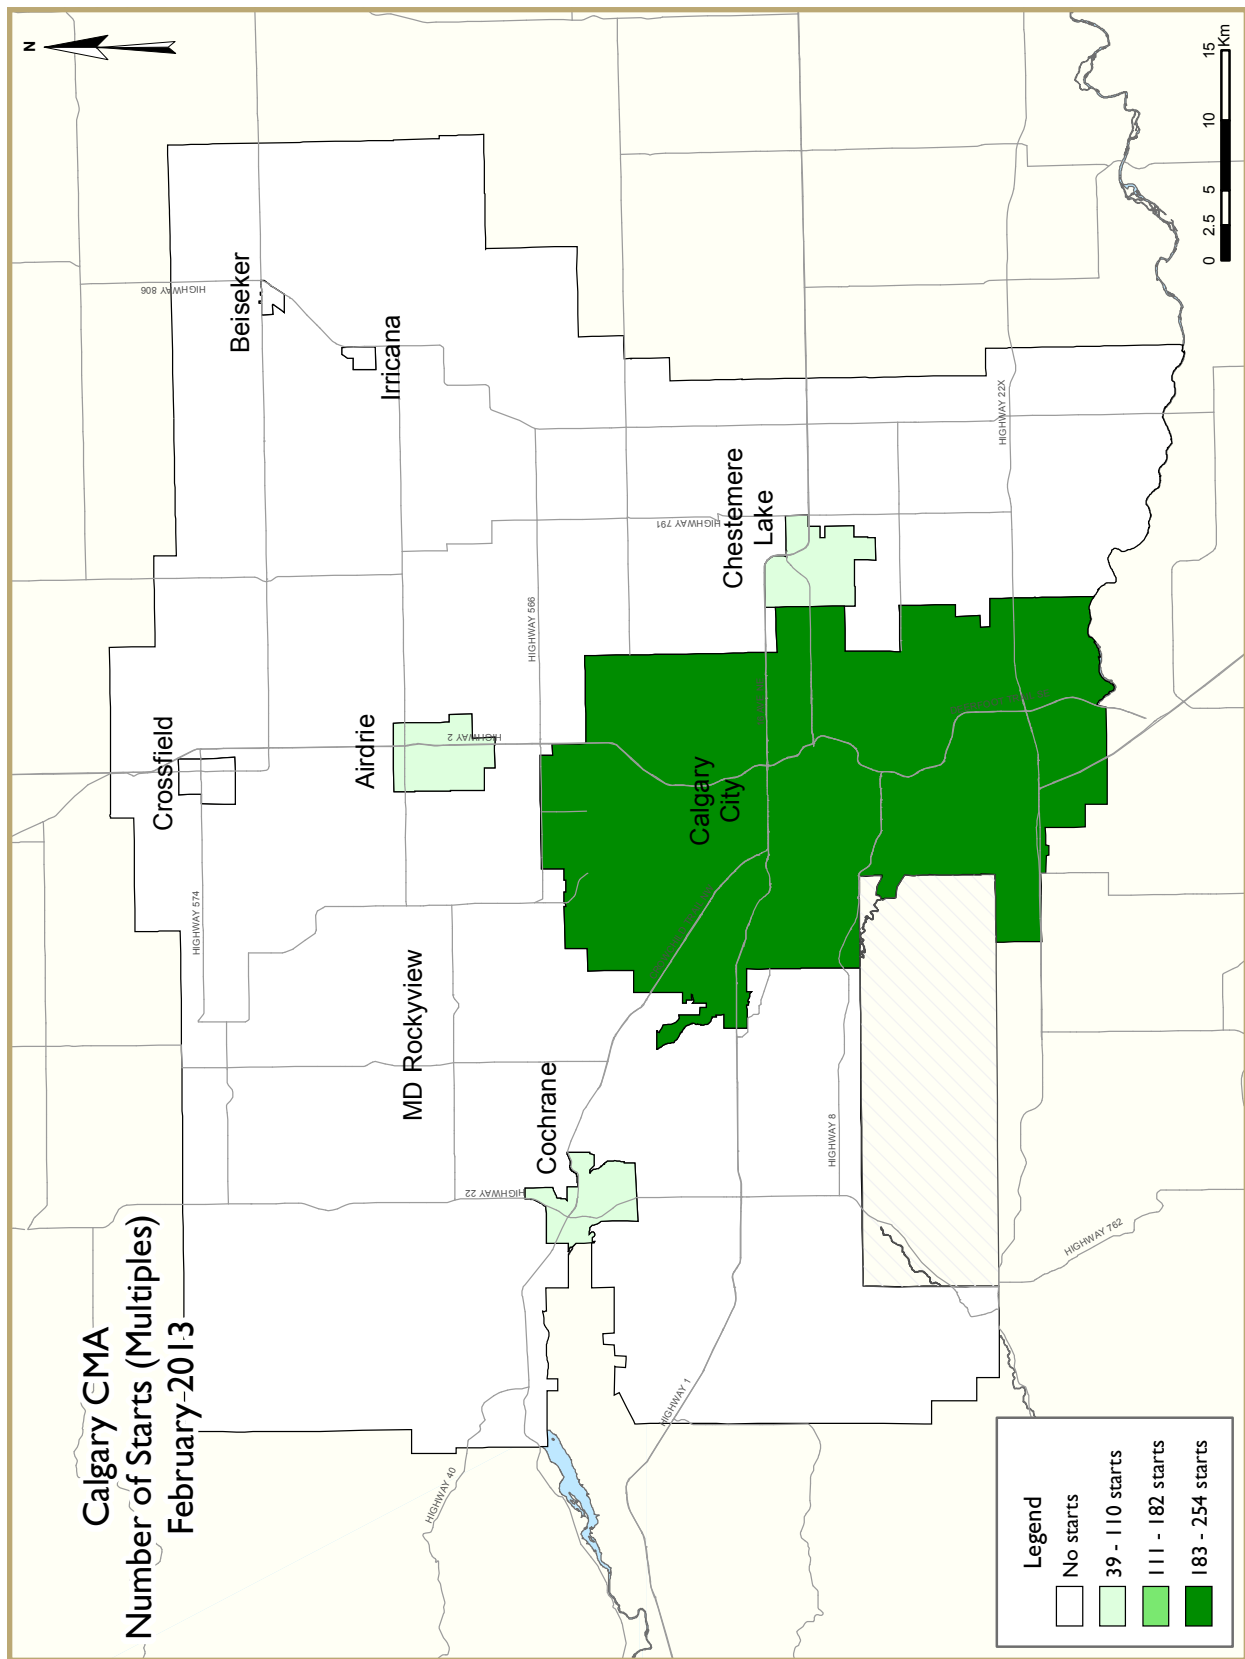

Source: CMHC

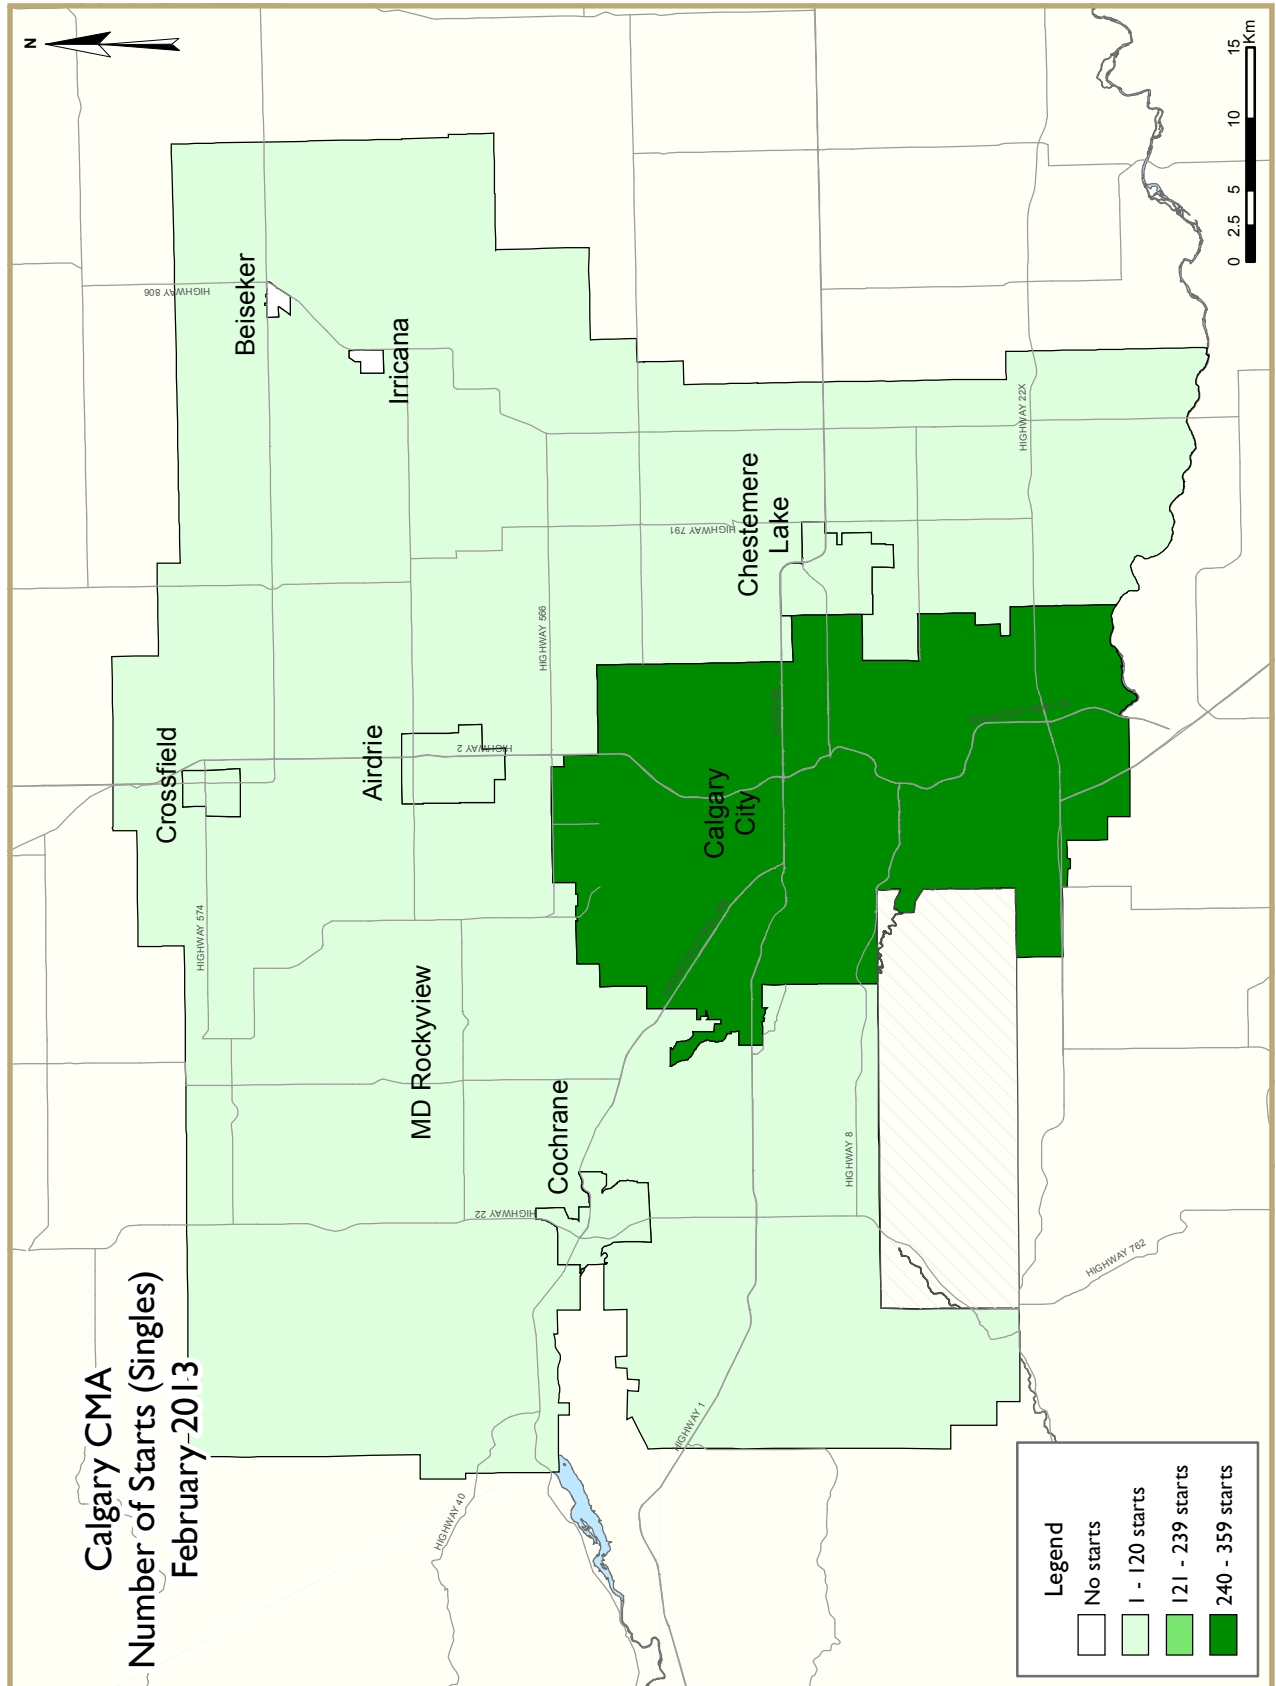

The number of multi-family units under construction was at 7,626 in February, a 17 per cent increase from 6,545 units in February 2012. Semi-detached, row and apartment units all rose from the same month in the previous year. There was a strong increase in new multi-family construction in 2012, with multi-family starts reaching 6,880 units, its second highest level since 1981. Multi-family completions totalled 504 units in February, up from 149 from a year earlier. After two months, multi-family completions amounted to 700 units compared 459 units in the corresponding period of 2012.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
