

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: August 2013

Highlights

- Housing starts post a more gradual upward trend in July
- Supply of single-detached homes on the rise
- Multi-family inventories trending down

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing Market Overview

Housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 16,804 units in July compared to 16,332 in June. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Edmonton CMA totalled 1,082 units in July, a 25 per cent reduction from 1,435 units in the same month of 2012. The number of single-detached homes declined seven per cent year-over-year, while multi-family starts dropped to 540 from 853 in July 2012. Within the City of Edmonton total housing starts declined from 1,098 units in July 2012 to 761 in 2013. To the end of July, housing starts in the Edmonton CMA increased 31 per cent compared to the corresponding period in 2012, totalling 9,048 units.

Single-detached starts in the Edmonton CMA slipped seven per cent from 582 units in July 2012 to 542 units in July 2013. This was the first year-over-year decline since January. Within city limits, single-detached starts rose five per cent to 358, up from 341 a year earlier. In the first seven months of 2013, foundations were poured on 3,342 single-detached homes in the Edmonton CMA, a five per cent increase from corresponding levels of 2012. Demand for single-family homes in Edmonton this year has been supported by employment growth and strong migration.

Figure 2

Source: CMHC

The supply of single-detached units, which includes units under construction and those in inventory, rose to 4,562 units in July 2013, a 10 per cent increase year-over-year. The increase was a result of both higher inventory levels and units under construction. There were 3,984 units under construction in July 2013, up 10 per cent from a year previous. At the same time there were 578 singles in inventory, an 11 per cent increase from July 2012.

The average absorbed price for single-detached units slipped one per cent to \$525,332 in July, down from \$528,152 a year previous. In July 2013, three-quarters of all new homes sold were priced under \$550,000, compared to 66 per cent in July 2012, which contributed to the decline in the average absorbed price. Despite

the decline, the year-to-date average absorbed price for a single-detached unit increased slightly, from \$513,972 in the first seven months of 2012 to \$516,342 in 2013.

Multi-family starts in the Edmonton CMA, which include semi-detached units, rows, and apartments, totalled 540 units in July compared to 853 in July 2012. An increase in row units was offset by declines in both semi-detached and apartment units. Despite the moderation in July, year-to-date multi-family housing starts were up 53 per cent to 5,706 units.

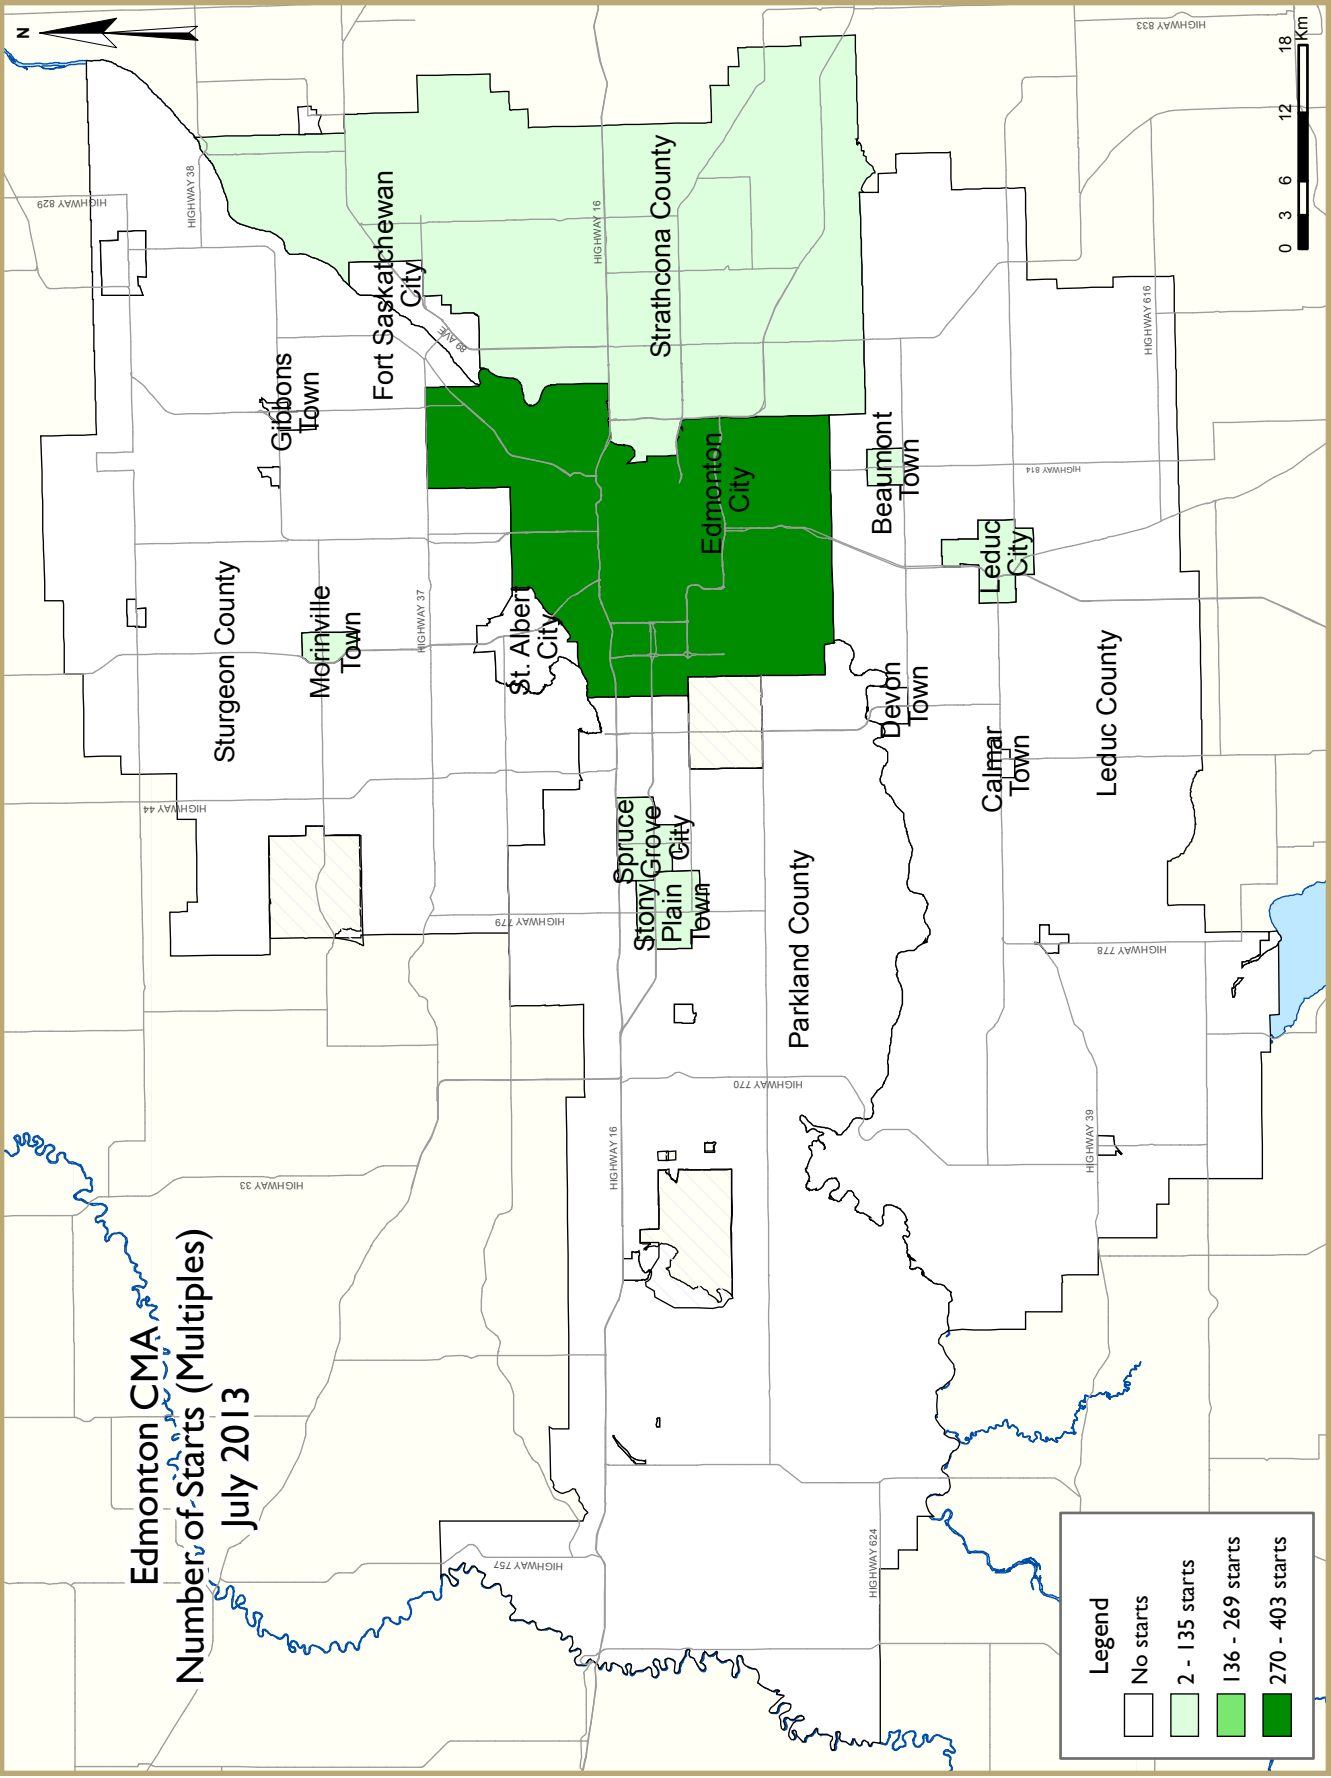

For the first time this year, the number of multi-family completions fell year-over-year. A total of 414 multi-family units were completed in July down from 491 a year previous. The level of inventory of multi-family

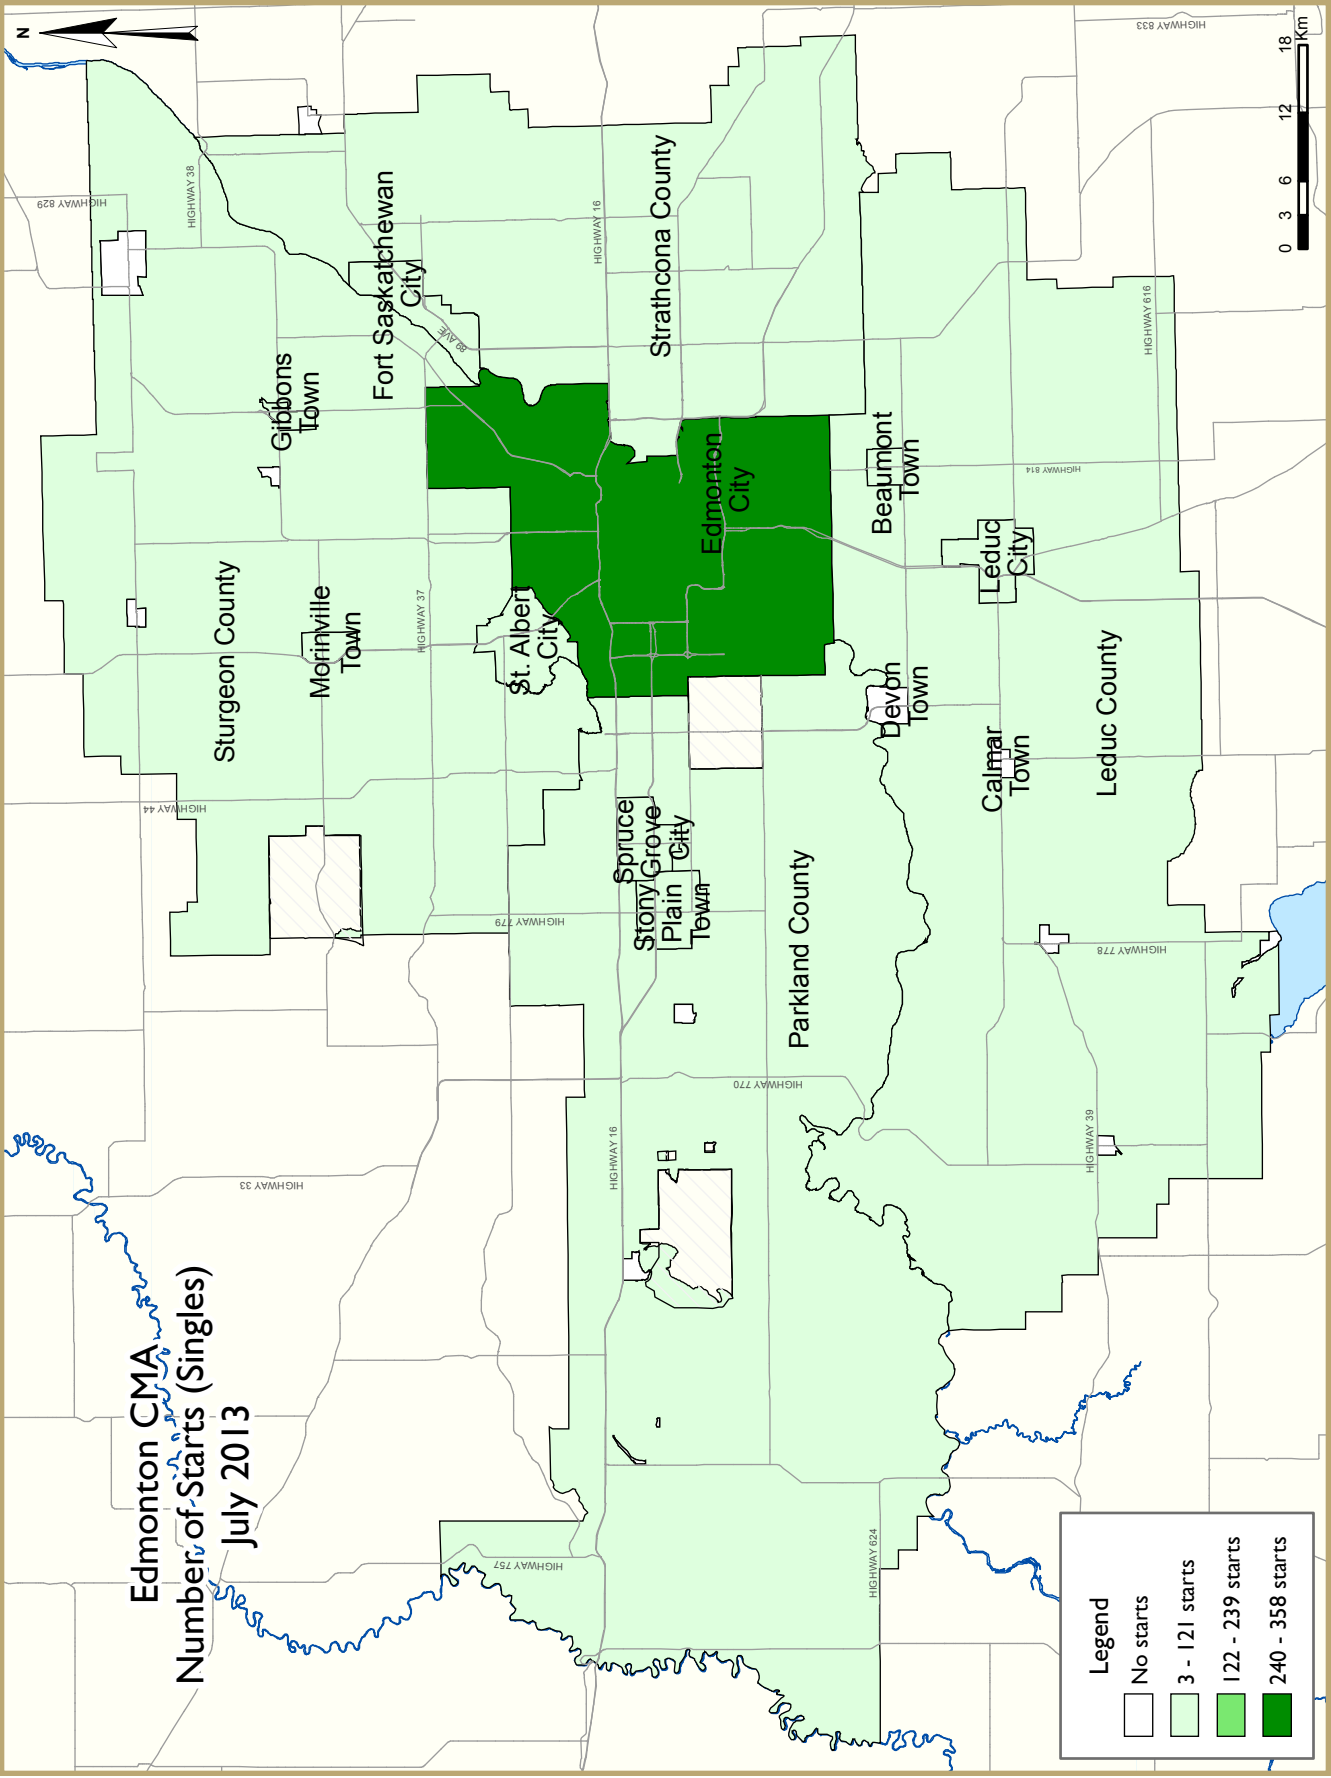

homes in the ownership market fell 24 per cent year-over-year to 651 units in July. Inventory levels of multi-family homes for ownership tenure have been trending down since mid-2011. Although completions and inventory levels declined year-over-year in July the number of units under construction rose. As of July 2013, there were 10,035 multi-family units under construction in the Edmonton CMA, up from 6,826 in the same month a year prior. As these units move to completion, both completions and inventory levels are expected to trend higher.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
