

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: September 2013

Highlights

- Housing starts trending down in August
- Gains in single-detached construction offset by declines in the multi-family sector
- Single-detached units under construction trending higher

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing Market Overview

Housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 16,164 units in August compared to 16,824 in July. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Edmonton CMA totalled 895 units in August, down three per cent from 918 units in the same month of 2012. The number of single-detached starts rose 14 per cent year-over-year, while multi-family starts declined 26 per cent from 378 units in August 2012 to 281 units in August 2013. In the first eight months of 2013, total housing starts in the Edmonton CMA increased 27 per cent over the same period of 2012.

Single-detached housing starts in the Edmonton CMA increased 14 per cent in August as foundations were poured on 614 units, up from 540 a year previous. Demand for new homes has been supported by employment gains, wage growth, and low mortgage rates. As well, lower levels of inventory in the competing resale market have prompted some buyers to look to the new home market to purchase a home. Within the city of Edmonton, single-detached housing starts were fairly stable in August, with 349 single-family homes started, compared to 352 in the corresponding period of 2012. To the end of August, single-detached housing starts in the Edmonton CMA increased 6.4 per cent over the same period of last year.

Figure 2

Source: CMHC

There were 3,996 single-detached units under construction in August, an eight per cent increase over August 2012. Inventory of new homes also rose in August to 593 units, up from 522 in the same month of last year. Higher levels of units under construction and inventory resulted in an increase in the supply of single-detached units. There were 4,589 units in supply in August, a nine per cent increase year-over-year.

Both the median and average absorbed price for single-detached units rose in August. The average price increased seven per cent year-over-year to \$562,665, while the median price grew three per cent to \$481,995. The increase in the average price was due in part to a higher number of homes being sold above \$650,000. In August, 105 homes sold for over \$650,000, accounting for 19

per cent of sales. In the corresponding period of 2012, sales in this price range accounted for 16 per cent of total sales.

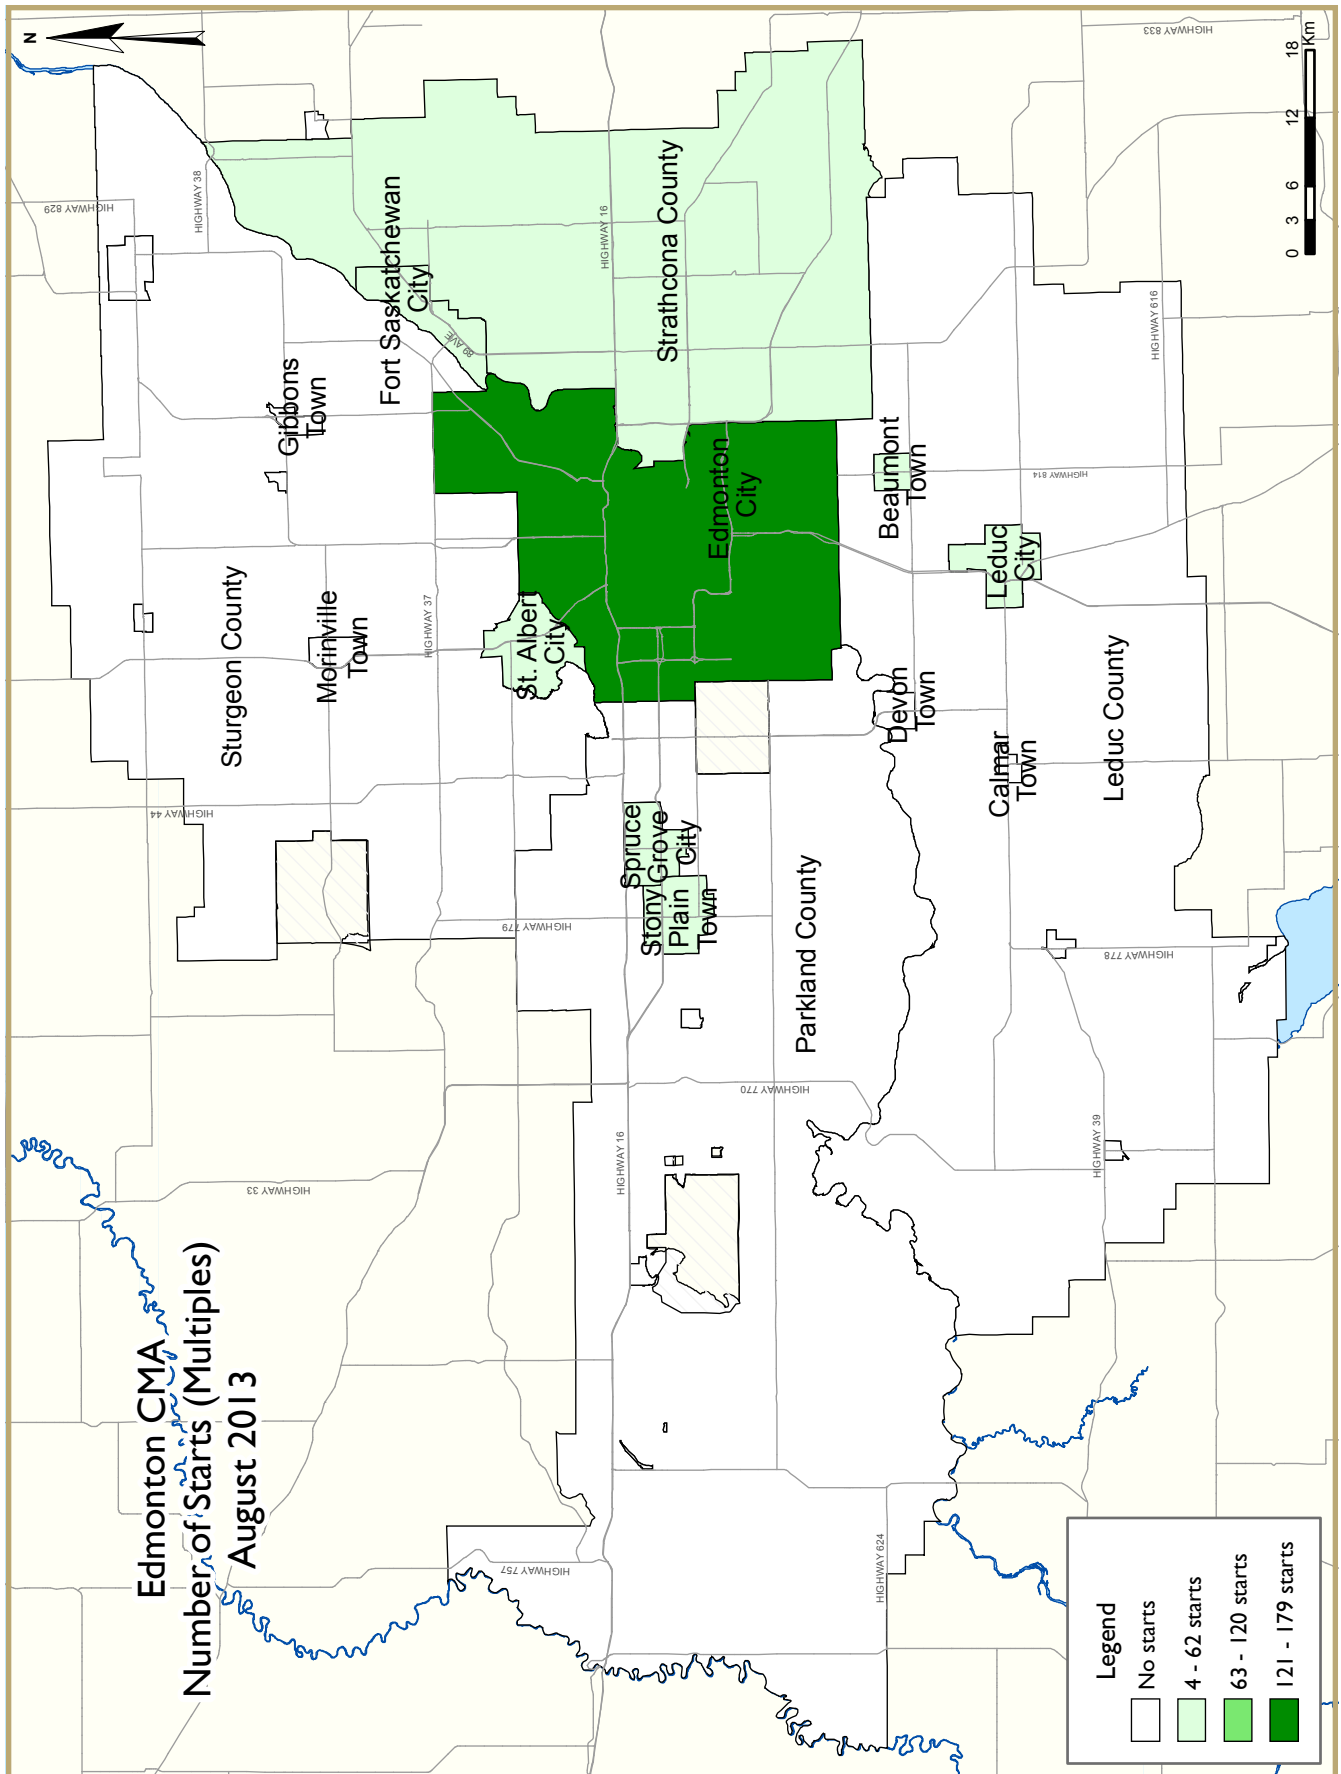

Multi-family starts in the Edmonton CMA, which include semi-detached units, rows, and apartments, totalled 281 units in August compared to 378 in August 2012. The number of semi-detached units that broke ground in August was relatively stable, totalling 208 compared to 212 a year previous. Construction of row units fell 20 per cent, while no apartment units were started. Through the first eight months of 2013, there were 5,987 multi-family starts, up from 4,104 units in the same period of 2012. Strong migration levels, a low vacancy rate, and a reduction in multi-family ownership inventory have supported multi-family construction this year.

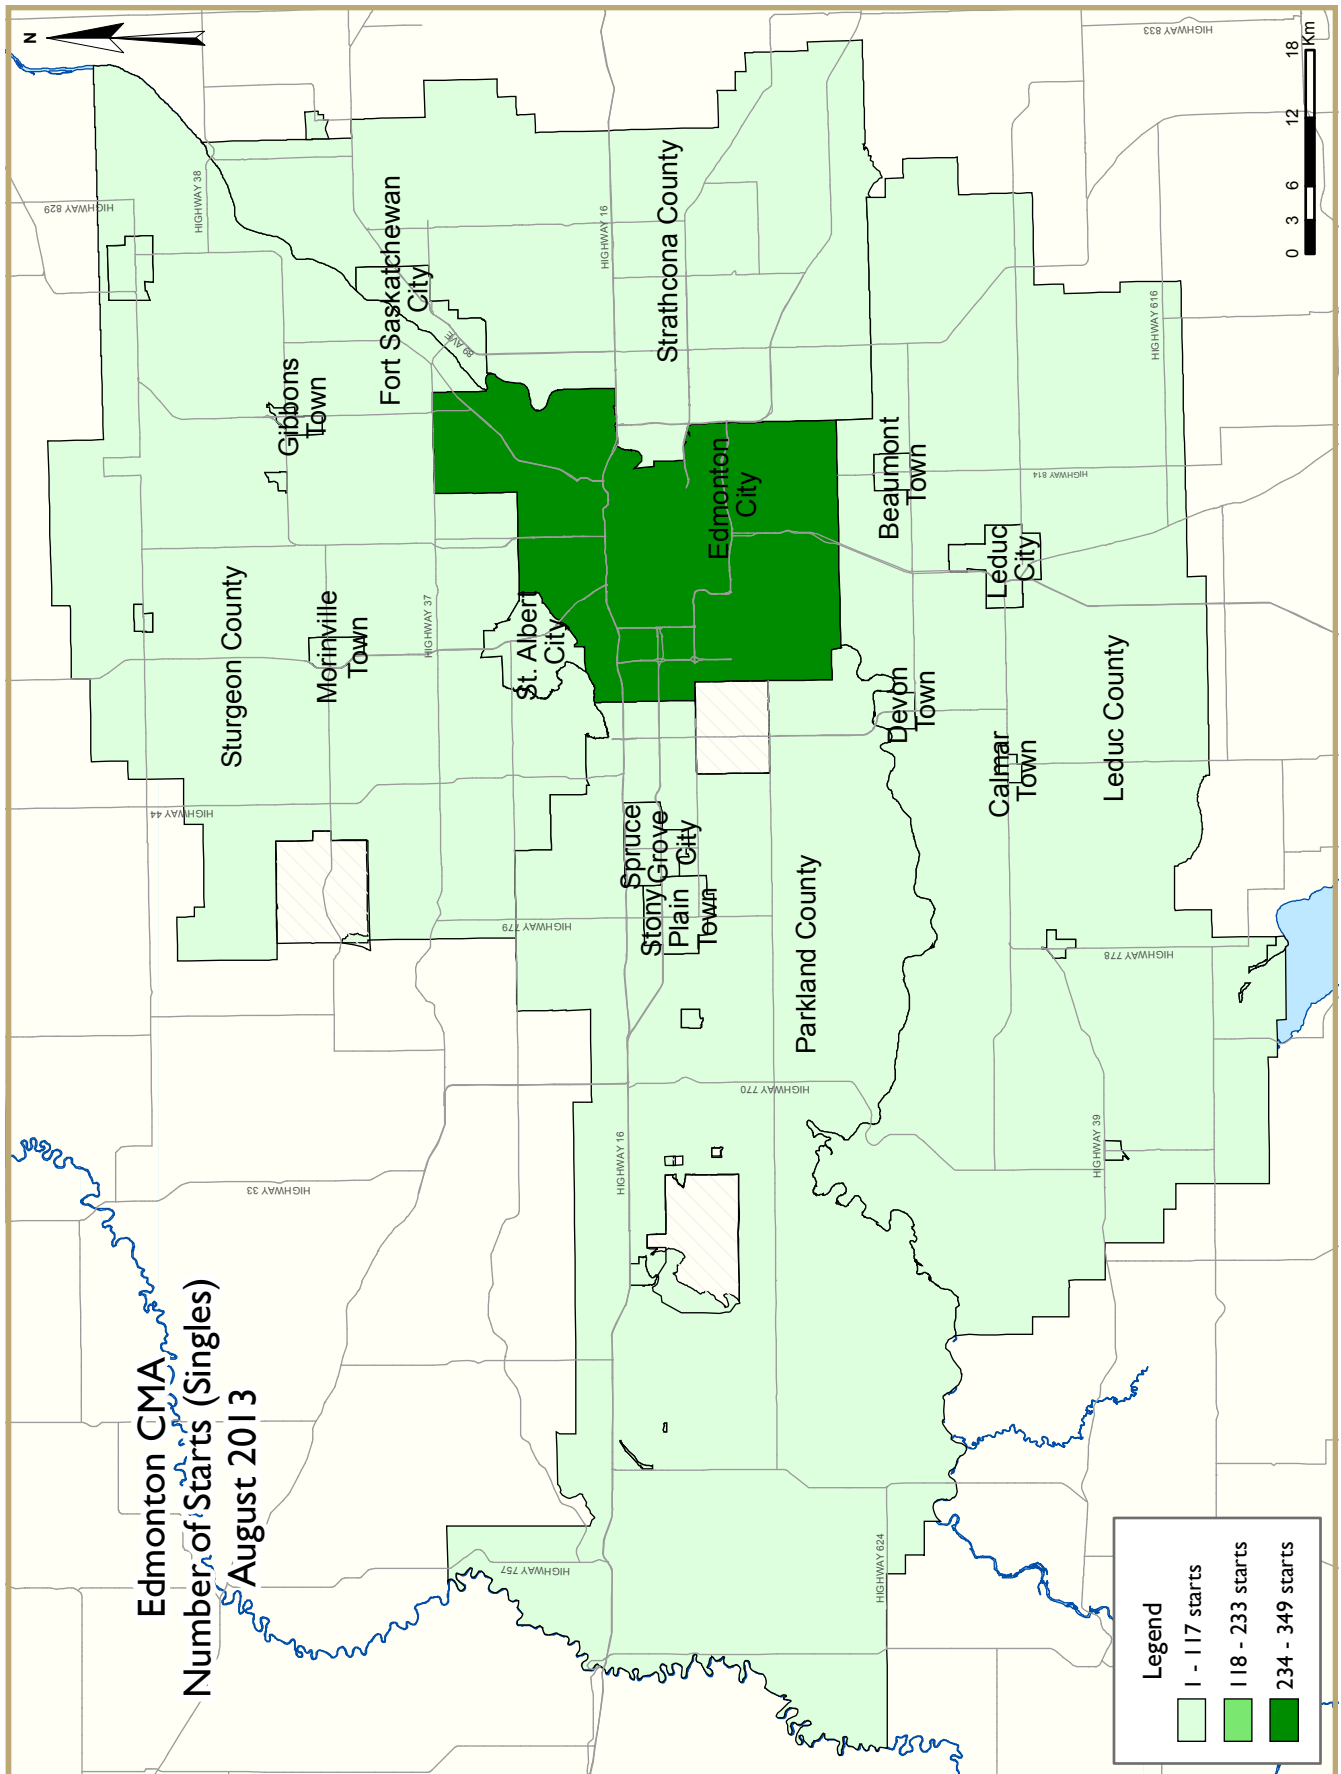

Completions of multi-family units decreased in August. A total of 480 units were completed, a 38 per cent decline from the 774 units completed in August 2012. An increase in completions of semi-detached units was offset by lower completions of row and apartment units. Absorptions of multi-family units of ownership tenure totalled 334 in August, down from 450 units a year previous. Inventory of multi-family homes continued to trend down in August. There were 641 units in ownership inventory in August, down from 651 a month previous and from the 932 units in ownership inventory in August 2012.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
