¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

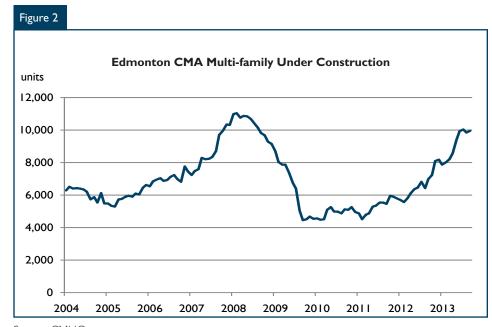

New Home Market

Housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 15,670 units in September compared to 16,152 in August. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Edmonton CMA totalled 1,077 in September, down 18 per cent from the same period a year previous. The number of single-detached starts fell five per cent, while multi-family housing starts were 26 per cent lower than the same month of 2012. Despite the decline in September, year-to-date total housing starts were up 21 per cent from the first nine months of 2012.

There were 518 single-detached housing starts in September, compared to 546 a year previous. Within Edmonton city limits, foundations were poured on 345 single-family homes, a four per cent increase over September 2012. After the first three quarters of 2013, single-family housing starts in the Edmonton CMA totalled 4,474 units, five per cent higher than the same period of 2012. An expanding economy, low mortgage rates, and elevated migration have supported demand for housing in 2013.

Completions of single-detached homes declined three per cent year-over-year in September. There were 420 single-family homes completed, down from 431 a year previous. Although completions moved lower in September, absorptions increased. There were 465 absorptions of single-family homes in September, up from 380 in the same month of 2012. Fewer completions and higher absorptions led to a decline in

Source: CMHC

ownership inventory. There were 548 single-family homes in inventory on the ownership market in September, a four per cent decline from the same month of 2012. Most of the decline was due to a reduction in the number of show homes. There were 202 show homes in inventory in September 2013, ten per cent lower than a year previous and the third lowest number since 2003.

The average price of absorbed singledetached units was \$583,600 in September, an 18 per cent increase over September 2012. The rise in the average price was attributed to a larger proportion of higher priced homes being sold. Homes priced above \$1,000,000 accounted for five per cent of single-detached absorptions in September, compared to just one per cent a year prior. By comparison, Statistic Canada's New House Price Index (NHPI), which is not impacted by compositional effects, showed a more modest increase in house prices. The NHPI increased by 0.8 per cent year-over-year in August.

Multi-family starts, which consist of semi-detached units, rows, and apartments, declined 26 per cent in September, from 760 units in 2012 to 559 this year. All three components of the multi-family segment registered a decline. Within the City of Edmonton, 379 units were started, down from 687 a year previous. Year-to-date multi-family housing starts totalled 6,546 units, a 35 per cent increase over the corresponding period of 2012. Demand for multi-family housing is being supported by elevated migration, employment growth, and a low vacancy rate in the rental market.

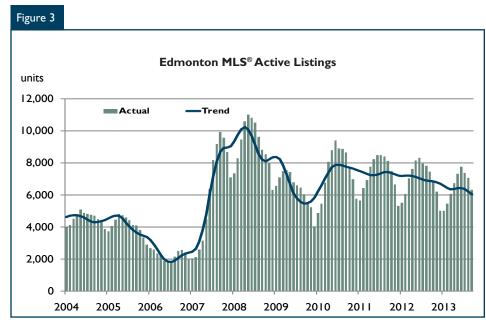

A total of 433 multi-family units were completed in September, more than double the 208 units completed in the same month of 2012. With housing starts outpacing completions, the number of units under construction increased compared to both the previous month and year-over-year. There were 9,960 multi-family units under construction in September, the third highest level since August of 2008.

Ownership inventory of multi-family units was 33 per cent lower in September 2013 than a year prior. Inventory has been trending lower since early 2012. However, with units under construction near record high levels, this trend is expected to reverse in the coming months. Absorptions of ownership multi-family units were up 77 per cent in September, with 423 units absorbed.

Existing Home Market

Residential MLS® sales in Edmonton increased in the third quarter of 2013. There were 5,601 sales in the third quarter of 2013, up 21 per cent from the same quarter of 2012. Through the first nine months of 2013, MLS® sales have risen nine per cent over the corresponding period of 2012. Demand in the resale market is being supported by continued economic expansion and elevated migration.

For the first time in 2013, the number of MLS® new listings increased year-over-year in the third quarter. There were 8,013 new listings posted from July to September 2013, up from 7,990 in the same quarter of 2012. Despite the recent increase, year-to-date new listings were down four per cent compared to the same period of 2012.

Source: EREB, Trended by CMHC

Despite the recent rise in new listings, prospective buyers are dealing with a reduced selection of homes in the resale market. With sales rising faster than new listings, the number of active listings on the resale market declined in the third quarter. Active listings averaged 6,922 from July to September, 11 per cent lower than the same quarter a year prior. The number of active listings has been lower year-over-year in each of the first nine months of 2013. Overall, active listings averaged 6,564 in the first three quarters of the year, down from 7,322

in the corresponding period of 2012.

Higher demand and relatively less supply have led to upward pressure on prices in the Edmonton resale market. The average MLS® residential price was \$347,809 in the third quarter of 2013, a five per cent increase over the average price of \$332,339 recorded a year prior. To the end of September, the average price increased three per cent year-over-year to \$346,631.

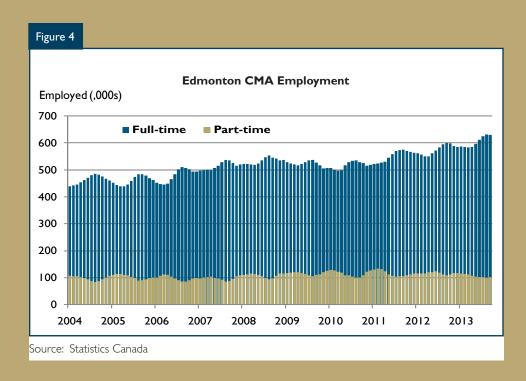

Economy at a Glance

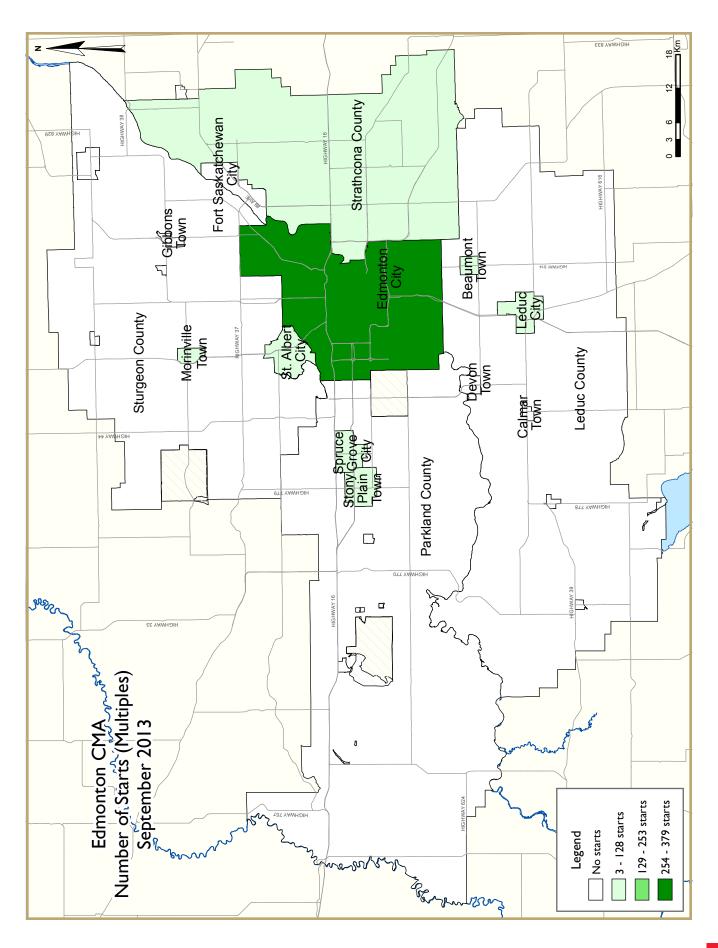

Housing demand in the Edmonton CMA in 2013 has been supported by job creation, income growth, and elevated migration. In the third quarter of 2013, employment averaged 732,700, a three per cent increase over the same quarter of 2012. All employment growth recorded in 2013 has been in full-time positions. Full-time employment increased five per cent year-over-year in the third quarter while the number of part-time positions fell six per cent.

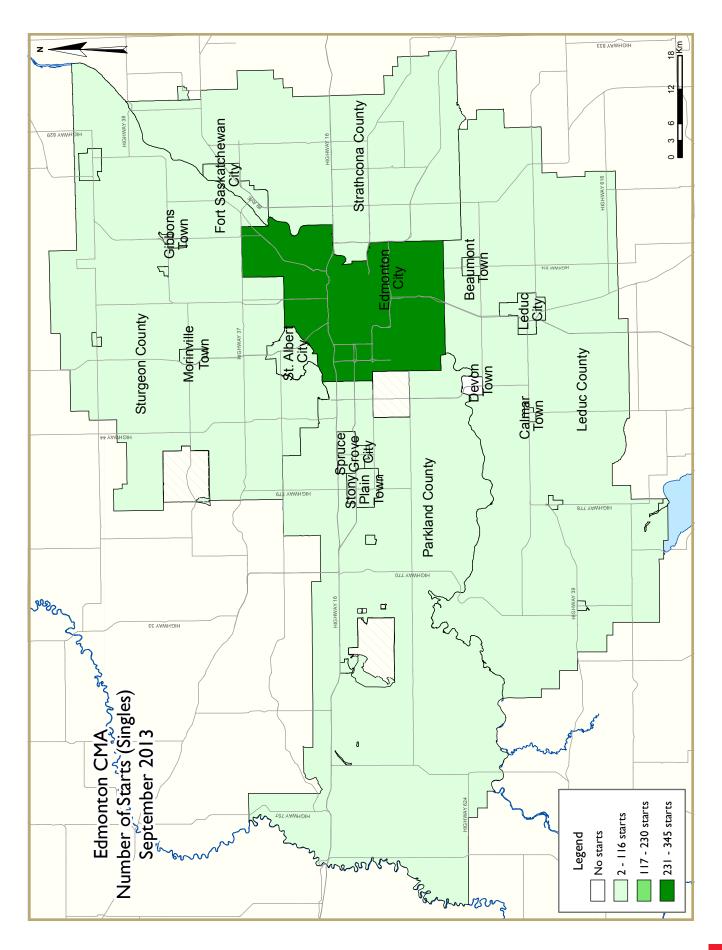

Despite employment growth, the unemployment rate in Edmonton increased in the third quarter. The rate averaged 5.3 per cent in the third quarter, up from 4.6 per cent in the same period a year prior. This was due to an expanding labour force, fuelled by elevated net migration.

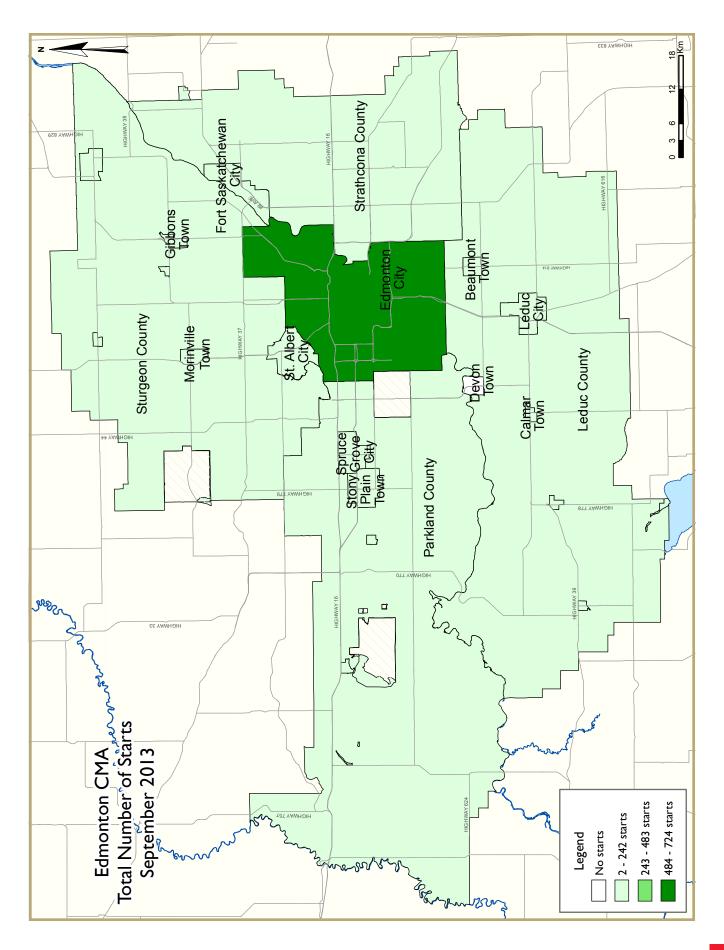

Weekly earnings in the Edmonton CMA averaged \$1,037 from July to September 2013, a three per cent increase from the third quarter of 2012. Increased demand for labour, coupled with a shift to more full-time employment, contributed to the increase.

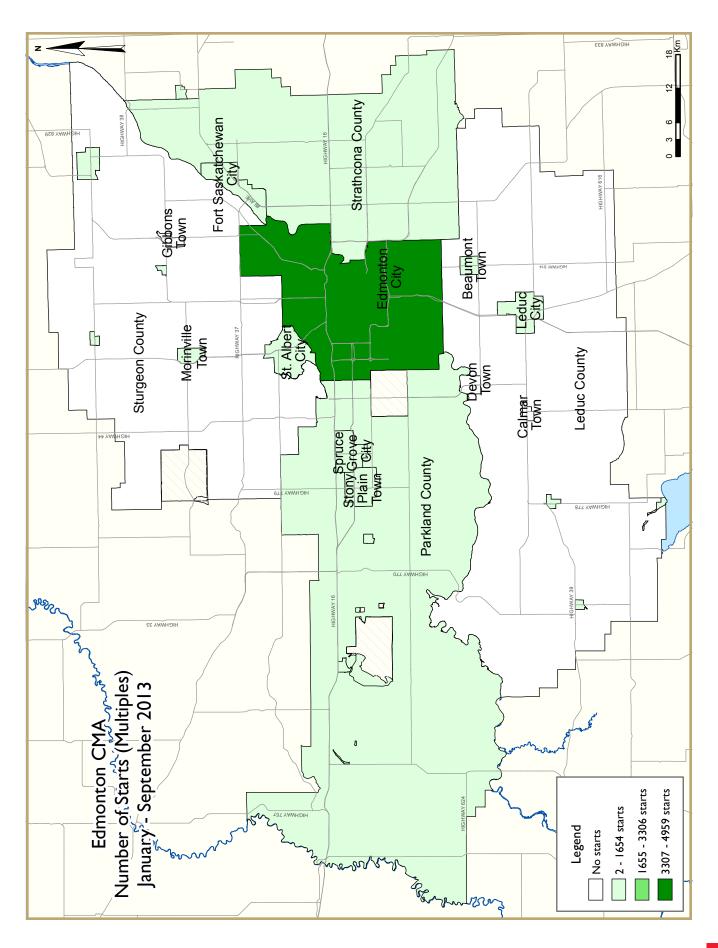

A favourable labour market and rising incomes continued to draw an elevated number of people into Alberta in the second quarter of 2013. Net migration into Alberta totalled 34,278 in the second quarter, a 46 per cent increase over the same period a year prior. Net international migration, including non-permanent residents, was 20,487 in the second quarter, a 35 per cent increase over the corresponding period of 2012. Interprovincial migration also saw large gains. Net interprovincial migration reached 13,791 from April to June, a 65 per cent increase over the same period of 2012.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "**Single-Detached**" dwelling (also referred to as "**Single**") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "**Apartment and other**" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
