CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: January 2013

Montréal metropolitan area housing starts in December 2012

According to the results of the latest starts survey conducted by Canada Mortgage and Housing Corporation (CMHC), 1,498 dwellings were started in the Montréal census metropolitan

area (CMA) in December 2012, compared to 2,005 during the same month in 2011.

The decrease in activity recorded in December confirmed the overall decline in housing starts for 2012. Demand for new homes is less vigorous, particularly as a result of the more balanced conditions on the resale market. In December, housing starts in the Montréal CMA fell in all

market segments, with the exception of rental housing, for which they more than doubled, reaching 368 units. In the freehold home segment, single-detached housing starts registered a drop of 11 per cent, while the number of new semi-detached and row homes fell by 47 per cent. In the condominium segment, construction recorded a decrease of 49 per cent, as a result of the high level of starts in December 2011.

An analysis by geographic sector revealed mixed results across the CMA in December 2012. Total housing starts climbed on the South Shore (+3 per cent), thanks in part to strong rental housing activity. However, condominium contributed to the overall decreases in starts on the Island of Montréal (-65 per cent), in Laval (-58 per cent) and in Vaudreuil-Soulanges (- 16 per cent). On the North Shore, housing starts remained steady.

Foundations were laid for 20,591 dwellings in the Montréal CMA during 2012, for a decrease of 9.4 per cent from 2011. The slowdown affected all market segments. Condominium

construction recorded a drop of 6 per cent but accounted for more than half of all housing starts. In the case of freehold homes, starts sustained decreases of 15 per cent for single-detached homes and 6 per cent for semi-detached and row houses. Lastly, rental housing activity was down by 0.4 per cent.

Resale market: Centris® sales slow down in the fourth quarter of 2012

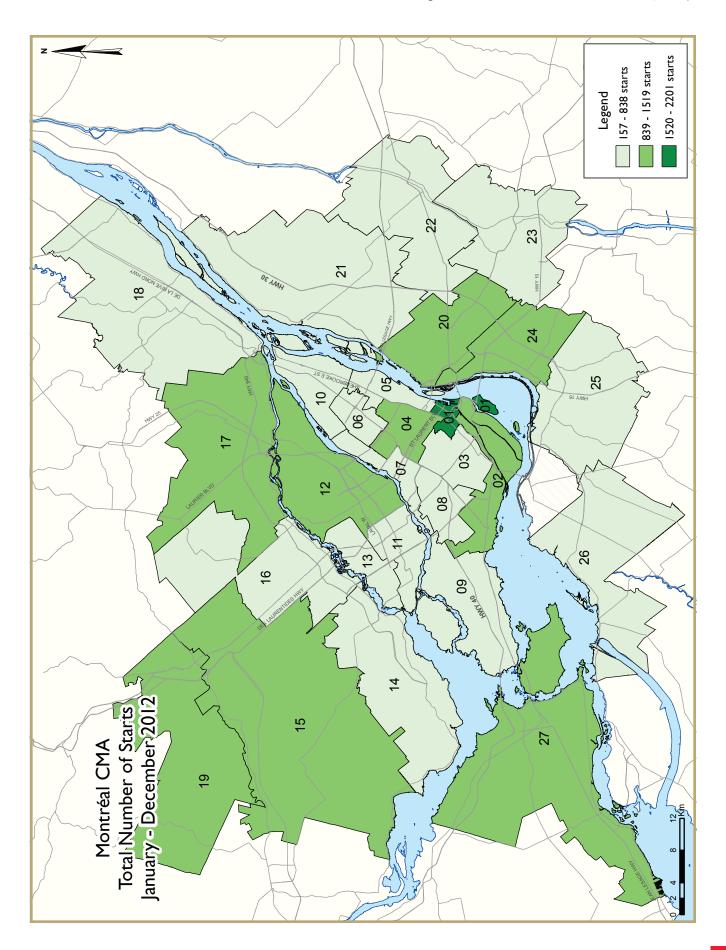

According to the latest Centris® housing statistics from the Quebec Federation of Real Estate Boards (OFREB), 7,501 Centris® sales were registered in the Montréal CMA during the fourth quarter of 2012, for a decrease of 15.0 per cent from the same period a year earlier. After having been quite strong during the first half of 2012, demand for existing homes slowed down during the second half of the year. The decline extended to all market segments, as Centris[®] sales fell by 12.4 per cent for single-family homes, by 15.0 per cent for plexes and by 19.5 per cent in the case of condominiums.

The supply of existing homes in the CMA, for its part, maintained the momentum that began more than a year ago. In fact, active Centris® listings went up by 8.9 per cent. Condominiums recorded the largest increase in supply, as active Centris® listings climbed by 23.5 per cent, to 10,365 units. In the single-family home and plex segments, active Centris® listings rose by 0.9 per cent and 4.9 per cent, respectively.

Overall, market conditions have now become balanced. This was largely attributable to the significant easing of the condominium segment, as the single-family home and plex segments remained favourable to sellers.

Resale market prices in the CMA climbed moderately in the fourth quarter. The average Centris® price reached \$331,413 during this quarter, up by 3.2 per cent over a year earlier. The increases in average Centris® prices were notable in the case of condominiums (+4.2 per cent) and plexes (+4.0 per cent) but more modest for single-family homes (+2.7 per cent).

 $^{^{\}rm I}$ In this report, the data presented on the rental segment exclude co-operative housing starts.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

On June 1, 2012, CMHC's Market Analysis Centre turned 25!

CMHC's Market Analysis Centre has a strong history as the Canadian housing industry's "go-to" resource for the most reliable, impartial and up-to-date housing market data analysis and forecasts, in the country.

CMHC's Market Analysis Centre e-reports provide a wealth of detailed local, provincial, regional and national market information.

- Forecasts and Analysis –
 Future-oriented information about local, regional and national housing trends.
- Statistics and Data —
 Information on current
 housing market activities —
 starts, rents, vacancy rates
 and much more.
