Date Released: July 2013

Montréal metropolitan area housing starts in June 2013

According to the results of the latest starts survey conducted by Canada Mortgage and Housing Corporation (CMHC), 1,362 dwellings were started in the Montréal census metropolitan

area (CMA) in June 2013, compared to 1,599 during the same month in 2012. This represented an overall decrease of 15 per cent in June for the Montréal CMA.

The slowdown in housing starts was observed for homeowner housing (-31 per cent) and condominiums (-6 per cent). As for rental dwellings, such starts posted a small gain (+8 per cent)¹. The decline registered in June

¹ In this report, the data presented on the rental segment exclude co-operative housing starts.

was in line with the downward trend in starts observed in the Montréal CMA since the beginning of the year and was due to modest economic growth and softer conditions on the resale market.

In the different geographic sectors of the CMA, the results revealed that, in June, housing starts fell in Vaudreuil-Soulanges (-51 per cent), in Laval (-53 per cent), on the North Shore (-13 per cent) and on the South Shore (-22 per cent). The decreases in these sectors resulted mainly from the slowdown in homeowner housing construction. As for the Island of Montréal, this sector recorded an increase (+6 per cent).

For the first six months of the year, total starts in the CMA revealed a decrease of 27 per cent from the same period a year earlier. Housing starts declined in all market segments: homeowner (-30 per cent), condominium (-24 per cent) and rental (-31 per cent).

Centris® sales continue to decrease

According to the latest Centris® housing statistics from the Quebec Federation of Real Estate Boards (QFREB), 12,066 Centris® sales were registered in the Montréal CMA in the second quarter of 2013, for a decrease of 9 per cent from the same period a year earlier. Although demand for existing homes fell for a fourth straight quarter, the drop recorded this past quarter was the smallest in a year. As well, the declines were similar in all market segments (about -9 per cent).

On the supply side, the number of existing homes for sale in the CMA continued to grow. In fact, overall active Centris® listings increased by 16 per cent, mainly on account of the hike in the condominium segment (+27 per cent). Active Centris® listings of single-family houses and plexes went up more moderately, as they rose by 9 per cent and 12 per cent, respectively.

With this decrease in demand and this increase in supply, resale market conditions for single-family houses and plexes remained balanced in the second quarter (12-month moving average). In the case of condominiums, however, the market was still favourable to buyers.

Consequently, the overall average Centris® price reached \$320,525 in the second quarter, down by 0.8 per cent from the same period in 2012.

None of the market segments posted a significant gain in its average price. In this regard, the second-quarter data remained in line with the situation observed since the beginning of the year. Reflecting the market conditions prevailing in each segment, the average Centris® prices rose slightly for plexes (+1.3 per cent) and single-family houses (+1.1 per cent) but registered a small decrease in the case of condominiums (-0.5 per cent).

Demand sluggish since the beginning of the year

During the first six months of the year, 21,948 dwellings were sold in all, for a drop of 14 per cent from the same period last year. Active listings were up by 13 per cent (to 31,498 units). This increase in supply was essentially due to the fact that homes for sale have been staying on the market longer, as new listings decreased by 1 per cent from a year earlier.

According to the detailed statistics by housing type, sales were down by about 15 per cent in each of the market segments. Conversely, active listings were up by 6 per cent for single-family houses and by 10 per cent for plexes, while condominiums stood out from the pack, with such active listings having risen by 26 per cent.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
