Introduction

Under the authority of the Minister of Industry, Statistics Canada administers the *Corporations Returns Act* which requires the collection of financial and ownership information on corporations conducting business in Canada. This information is used to evaluate the extent of foreign control of the Canadian corporate economy.

The *Corporations Returns Act* requires that an annual report be submitted to Parliament summarizing the extent to which foreign control is prevalent in Canada. This is the report for reference year 2011.

In this report, three components are used to measure foreign control: assets, operating revenues and operating profits.

- Asset-based measures of foreign control provide a longer term perspective. Assets are a stock item, reflecting economic decisions and market conditions that evolve more slowly over time.
- Revenue-based measures, on the other hand, represent a flow item and are closely tied to the business cycle. Revenues tend to reflect current business conditions, causing them to be more volatile than asset-based measures.
- Profits are a measure of the financial health and well-being of an economy and can be used to assess its performance and sustainability.

These statistics are compiled from enterprise level data. An enterprise can be a single corporation or a family of corporations under common ownership and/or control, for which consolidated financial statements are produced.

The report covers all incorporated enterprises in Canada, including federal and provincial government business enterprises (GBEs) but excluding enterprises classified under the North American Industry Classification System (NAICS) to Management of Companies and Enterprises (NAICS 55); Religious Organisations (NAICS 8131); Political Organisations (NAICS 81394); Public Administration (NAICS 91), as well as Funds and other Financial Vehicles (NAICS 526). GBEs are public sector enterprises engaged in operations of a commercial nature.

All industry analysis is based on 21 groups of industries which have been defined using NAICS.

Highlights

- In 2011, the combined value of both foreign and Canadian-controlled assets, revenues and profits in Canada all increased over the previous year. The share of assets held by foreign-controlled enterprises dropped from 19.2% to 18.7%, while the foreign-controlled share of revenues was down slightly from 29.1% to 28.9%. The foreign-controlled share of operating profits grew from 22.3% to 22.7%.
- In the non-financial industries, the share of assets under foreign control was 26.2% in 2011, down slightly from 26.6% the previous year. The share of foreign-controlled revenues dipped from 30.1% to 30.0%. Profit growth by foreign-controlled enterprises in the manufacturing and oil and gas sectors contributed to the increase in the share of profits under foreign control, up from 24.5% in 2010 to 25.2% in 2011.
- The foreign-controlled share of assets in the finance and insurance industries was 12.7% in 2011, unchanged from the previous year. However, foreign-controlled shares of revenues and profits were down from the previous year as many foreign multinational enterprises recovered from the global financial crisis at a slower pace than Canadian controlled financial enterprises. This resulted in revenue shares of 19.5 % and profit shares of 15.7%, down from 20.2% and 16.5% respectively.
- Enterprises from the United States, the United Kingdom, the Netherlands, France, Germany and Japan accounted for over 83% of the foreign-controlled assets in Canada in 2011. U.S.-controlled enterprises maintained the largest overall share, with 49.4% of total foreign-controlled assets, 55.4% of revenues, and 58.0% of profits.

Analysis

All Industries

In 2011, enterprises operating in Canada held \$8.9 trillion in assets, generated \$3.5 trillion in operating revenues, and earned \$343 billion in operating profits. Assets increased 12.7%, operating revenues increased 8.0% and operating profits increased 14.5% from 2010 levels.

Both Canadian and foreign controlled asset values increased in 2011, by 13.3% and 9.9% respectively. The foreign-controlled asset share dropped from 19.2% to 18.7%.

Canadian-controlled revenues increased 8.3% compared with an increase of 7.3% for those under foreign control. The share of revenues under foreign control was down slightly to 28.9%, from 29.1% in 2010.

Both Canadian and foreign-controlled operating profits grew in 2011, by 13.9% and 16.6% respectively. The share of profits under foreign control increased slightly from 22.3% to 22.7% and was mainly attributed to the non-financial sector.

Non-financial Industries

In 2011, enterprises in non-financial industries held \$4.0 trillion in assets, generated \$3.1 trillion in revenues and earned \$251 billion in profits. Non-financial industries represented less than half (44.7%) of the assets for all industries in Canada, but generated 89.8% of revenues and 73.3% of profits.

Assets held by foreign-controlled enterprises increased 6.1% in 2011, while those held by Canadian-controlled enterprises rose by 8.5%. As a result, the share of assets under foreign control was 26.2%, down slightly from 26.6% the previous year.

Total operating revenues rose in 2011 with revenue under foreign control up 7.6% and revenue under Canadian control up 8.3% from 2010. The share of operating revenues under foreign control dipped slightly to 30.0%, from 30.1% the year before.

Operating profits increased in 2011 for both Canadian and foreign-controlled enterprises, by 14.7% and 19.3% respectively. The resulting share of foreign-controlled operating profits increased from 24.5% to 25.2%. Although this marked the third consecutive year of foreign-controlled profit growth, shares remained below historic peak levels seen prior to the economic downturn.

Finance and Insurance Industries

In 2011, enterprises operating in the financial sector of Canada accounted for \$4.9 trillion in assets, \$352 billion in revenues and \$92 billion in profits. This translated into 55.3%, 10.2% and 26.7% of total assets, revenues and profits, respectively.

Canadian and foreign-controlled financial enterprises showed virtually the same level of growth in assets in 2011, increasing 16.9% and 17.0%, respectively. The foreign-controlled share of assets was 12.7%, unchanged from the previous year.

The value of Canadian-controlled enterprises revenues rose 8.2% in 2011. Revenues for foreign-controlled enterprises also showed positive growth, up 3.5%. The share of revenues under foreign control decreased from 20.2% to 19.5%.

Operating profits for Canadian-controlled enterprises in the financial sector increased by 12.0% in 2011 while foreign-controlled profits increased by 5.8%. Foreign-controlled shares of operating profits were 15.7%, down from 16.5% the year before.

Selected Industries

Manufacturing

The Canadian manufacturing sector continued to recover in 2011 following the economic downturn in 2009.¹ This sector reported assets valued at \$830.7 billion, up 4.3% from 2010. Assets held by Canadian-controlled enterprises increased 8.4%, while those held by foreign-controlled enterprises increased by less than one percent (0.6%). Manufacturing remained the largest sector in terms of non-financial assets, and also continued as the sector with the highest percentage share of foreign-controlled assets at 50.6%, albeit down from 52.5% in 2010.

Both Canadian and foreign-controlled manufacturers showed revenue growth in 2011, at 10.8% and 3.8% respectively. The larger revenue increase experienced by Canadian-controlled enterprises caused the share of foreign-controlled revenues to drop to 47.0% of total manufacturing revenue. This was down from 48.7% the previous year.

Manufacturing operating profits showed positive year over year growth in 2011, up 29.8% to \$57.4 billion. Increases in petroleum and coal products manufacturing, fabricated metal products and machinery manufacturing, and motor vehicle and trailer manufacturing all contributed to the higher overall profits in 2011. Although Canadian-controlled manufacturers increased their profits by 25.2%, manufacturers under foreign-control outpaced, with profit growth of 36.6%. The share of manufacturing profits under foreign control rose from 40.4% to 42.5%, up but still running below the range of 50% to 55% observed during the decade leading up to the economic downturn.

Oil and gas extraction and support activities

Oil and gas enterprises posted increases for all three financial indicators in 2011. Assets increased by 9.2%, revenues were up 29.6%, and profits increased by 52.5% from the previous year.

Canadian-controlled enterprises held assets valued at \$358.9 billion, up 7.3% from the previous year. Oil and gas assets under foreign control were valued at \$197.0 billion, their highest value on record, up 12.9% from the previous year. The foreign-controlled share of these assets increased to 35.4% from 34.3% in 2010.

Growth in oil and gas revenues was greater for foreign-controlled enterprises, up 42.2% compared to those under domestic control which grew 16.6% over 2010. Foreign-controlled revenue shares increased from 50.6% to 55.6% of total oil and gas revenues.

Oil and gas enterprises experienced profit growth in 2011. Canadian-controlled enterprise profits rose 64.3% while those under foreign control increased 39.6%. Foreign-controlled share of profits was 43.7%, down from 47.8% in 2010.

Depository credit intermediaries

In 2011, enterprises operating in the depository credit intermediary (mainly banking) industry accounted for 63.3% of all the assets in the finance and insurance sector of Canada, along with 35.9% of revenues and 41.1% of profits. Total assets for this industry grew 14.9% to \$3.1 trillion. Total banking revenues rose by 9.9% and profits grew by 25.7%. These figures resulted in the sector returning to levels observed prior to the economic downturn.

Assets, revenues and profits of Canadian-controlled enterprises in this heavily regulated industry increased 14.7%, 9.5% and 24.8%, respectively. Foreign-controlled enterprises saw a return to positive growth in 2011 with assets up 18.3%, revenues up 16.1% and profits up by more than a third (+37.3%).

The foreign-controlled share of assets rose slightly from 6.9% to 7.1%, share of revenues increased from 6.5% to 6.9%, and the share of profits under foreign control increased from 7.5% to 8.2%.

Foreign control by country

The *Corporations Returns Act* enables Statistics Canada to process returns reporting that foreign control in Canada is represented by enterprises from over 85 different countries around the world. However, about 83% of control can be attributed to enterprises from just 6 countries, as shown in text table 10.

American-controlled enterprises continued to represent the highest share of foreign-controlled assets, revenues and profits in 2011. Their share of assets decreased from 51.8% to 49.4% and their share of revenues decreased from 57.9% to 55.4%. The share of profits earned by US-controlled enterprises increased to 58.0% in 2011, up from 56.9% the previous year. Foreign assets held by enterprises under U.S. control were distributed 29.2% in the financial sector and 70.8% in the non-financial sector.

Enterprises from the second largest source of foreign control in Canada, the United Kingdom, reported an increase in asset shares from 12.9% to 13.8% and an increase in revenue shares from 8.0% to 8.7%. Unlike American-controlled enterprises, assets under U.K. control were more concentrated in the financial sector (64.8%) versus the non-financial sector (35.2%).

Dutch-controlled enterprises held the third largest proportion of foreign-controlled assets in Canada in 2011. Their share of assets increased from 7.1% to 8.0%, with shares of revenues also rising to 6.8%, up from 6.2% the year before. The distribution of foreign assets controlled by enterprises in the Netherlands was fairly equal, with 54.3% in the financial sector and 45.7% in the non-financial sector.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Note(s): Shares are calculated by dividing a value for one or a group of countries of control (numerator) by the total value for all countries of control (denominator). When profits in the numerator are negative, the corresponding profit share will be negative. When profits in the numerator are larger than those in denominator, the profit share will be greater than 100%. This can occur when the denominator is the sum of negative and positive profits. Text table data may not correspond exactly with statistical tables due to rounding.

Concepts and methods

This section outlines the basic concepts and methods needed to understand the data in this report.

Coverage

The data in this publication are compiled for statistical enterprises. An enterprise is a single corporation or a family of corporations under common ownership and/or control, for which consolidated financial statements are produced.

These enterprises are classified according to the 2012 North American Industry Classification System (NAICS). Each enterprise is assigned a six-digit NAICS code in two steps. First, a NAICS code is assigned to each establishment belonging to an enterprise. The enterprise is then assigned the NAICS code for the industry which accounts for the largest share of value-added across all the establishments that make up the enterprise. For publication purposes, enterprise data based on the six-digit NAICS codes have been aggregated into 21 industry groups such as mining and manufacturing (Text table 1).

The statistics in the report cover all incorporated enterprises in Canada including federal and provincial government business enterprises (GBEs) but excluding enterprises classified to Management of Companies and Enterprises (NAICS 55); Religious Organisations (NAICS 8131); Political Organisations (NAICS 81394); Public Administration (NAICS 91); as well as Funds and other Financial Vehicles (NAICS 526). GBEs are public sector enterprises engaged in operations of a commercial nature.

Text table 1
Publication level of aggregation

NAICS Canada 2012	
Total Non-Financial	
Agriculture, forestry, fishing and hunting	11
Oil and gas extraction and support activities	211, 213
Mining and quarrying (except oil and gas)	212
Utilities	22
Construction	23
Manufacturing	31, 32, 33
Wholesale trade	41
Retail trade	44, 45
Transportation and warehousing	48, 49
Information and cultural industries	51
Real estate and rental and leasing	53
Professional, scientific and technical services	54
Administrative and support, waste management and remediation services	56
Educational, healthcare and social assistance services	61, 62
Arts, entertainment and recreation	71
Accommodation and food services	72
Repair, maintenance and personal services	811, 812, 813
Total Financial and Insurance	
Depository credit intermediation	5211, 5221
Non-depository credit intermediation	5222
Insurance carriers and related activities	524
Other financial industries	5223, 523

Data Sources

The *Corporations Returns Act* report focuses on the statistical enterprise. It is based on a dataset which links country of control information derived at the legal entity level, with financial data compiled at the enterprise level from Industrial Organization and Finance Division's (IOFD) Financial and Taxation Statistics for Enterprises program.

Country of control data

The country of control data are derived from ownership schedules filed annually with Statistics Canada by corporations liable under the *Corporations Returns Act*, and information obtained from the Canada Revenue Agency's administrative records.

Statistics Canada collects ownership information from incorporated businesses in Canada whose gross revenues exceed \$80 million, whose assets exceed \$200 million or whose long-term debt or equity owing to non-residents exceeds a book value of \$1 million. This information is used to establish links between parent corporations and their subsidiaries, to define corporate ownership structures, and to determine the ultimate country of control for each corporate structure. The ownership information is supplemented by research based on other publicly available sources which include web sites, gazettes, press clippings, as well as federal and provincial business registries.

Statistics Canada relies on information from Canada Revenue Agency administrative records to determine the country of control for corporations whose assets, revenues and equity or debt are below the thresholds for collection of ownership data. These businesses tend to have a simple corporate structure and are, for the most part, Canadian-controlled. These administrative records are maintained on Statistics Canada's Business Register.

Financial data

The IOFD Financial and Taxation Statistics for Enterprises combined three sources of financial data to form a census of the 1,353,136 enterprises in the target population for 2011 (Text table 2). Annualized data from IOFD's Quarterly Survey of Financial Statements (QFS) provided consolidated data for 3,673 of the largest enterprises. Public Sector Statistics Division supplied data for 120 provincial and federal level government business enterprises. Tax Data Division supplied financial information for the remaining enterprises from T2 Corporation Income Tax Returns and the General Index of Financial Information (GIFI)

Text table 2

Contribution of assets and operating revenue by data source, 2011

Data source	Enterprises	Portion of total assets	Portion of total operating revenues
	number	percent	
Quarterly survey of financial statements	3,673	70.9	52.6
Government business enterprises data	120	8.7	3.5
Administrative taxation data	1,349,343	20.4	43.9
Total	1,353,136	100.0	100.0

Reference period

The series in this report are intended to cover business activity within a calendar reference period. Data derived from the QFS approximate the calendar period. The GBE data reflect fiscal periods which often are governed by the April to March fiscal year of governments. However, beginning with the 2002 reference year, the GBE data have been adjusted to reflect the calendar period. The administrative data obtained from the Canada Revenue Agency are based on the financial statements and income tax returns filed by corporations for fiscal periods which end in the calendar period. However, beginning with the release of the 2004 data, data from income tax returns for fiscal periods ending April to March have been included in order to better represent business activity in the calendar period.

Edit and imputation

At the record level, several checks are performed on the financial data to verify internal consistency and identify extreme values. Checks are also performed to ensure that financial data records have been assigned a country of control code and that this information is accurate.

Imputation of the financial data for complete non-response is performed by two methods. The preferred and most common method makes use of historical information about the non-responding unit and current trends in the principal characteristics of similar units. When historical information is not available, such as in the case of new units, a donor of similar size and industry is substituted for the missing unit.

Annual changes in the tabulated financial data are reviewed by industry and country of control. The largest changes are investigated and updates are made to the financial and country of control data as required. In addition, these data are analyzed for comparability with trends in related Statistics Canada data series and with general trends in the economy.

Estimation

As noted earlier, annual data are obtained from one of three sources for each enterprise in the population of interest. Estimates are derived by tabulating the enterprise data for this population. These estimates are produced and published by industry and country of control.

Due to certain financial reporting constraints, data for enterprises in the insurance industry could not be obtained through the administrative data source. As a result, estimates for this industry are derived using QFS weighted estimates.

Confidentiality

The confidentiality of the financial statistics is protected under the provisions of the *Statistics Act*.

For this reason, these data are released in aggregate form only and are subject to various confidentiality checks before they are released to prevent the publication or disclosure of any information deemed confidential. If necessary, data are suppressed to prevent direct or residual disclosure of identifiable data.

Direct disclosure could occur when the value in a tabulated cell is composed of only a few respondents or when the cell is dominated by a few companies. Residual disclosure could occur when confidential information can be derived indirectly by piecing together information from different sources or data series.

Data accuracy

While considerable effort is made to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. There are two types of errors in statistical information: sampling and non-sampling. Non-sampling errors are the only type that applies to this program, given that the estimates are based on a census of the population, and not a sample (with the exception of the insurance industry).

Non-sampling errors can arise from a variety of sources and are difficult to measure. Among non-sampling errors are response errors, such as gaps in the information provided by corporations in their returns, and errors in processing, such as miscoding the industry of an enterprise.

Revisions

The most recent annual data in this report are subject to a one-year revision policy. These data may be revised to include amended information or reports from respondents that are received after the end of a collection cycle.

Key indicators

Total assets are the sum total of economic resources over which an enterprise exercises a certain control. They include cash and deposits; accounts receivable and accrued revenue; inventories; investments and accounts with parents, subsidiaries and affiliates; portfolio investments; loans given to other enterprises; and capital assets.

Operating revenues include revenues from the sales of goods and services; rental and operating lease revenues; and revenues from commissions, franchise fees, and royalties.

Operating expenses include the cost of goods and services used as inputs into production; wages and salaries; employer portion of employee benefits; indirect taxes; and depreciation, amortization and depletion of buildings, machinery and natural resources.

Operating profits are the difference between operating revenues and operating expenses.

Key concepts

Statistical Enterprise

An enterprise is a single corporation or a family of corporations under common ownership and/or control, for which consolidated financial statements are produced.

Controlling Interest

The controlling interest of an enterprise, referred to as the enterprise head, may be an individual, a related group, a corporation or a government. Controlled corporations are called subsidiaries. A multi-corporation enterprise contains one or more subsidiaries. A corporation that is not controlled by another corporation and that does not control another corporation is called a single-corporation enterprise.

Corporate control

Corporate control is the potential to affect the corporate strategic decision-making process of the board of directors of a corporation. In many cases where control is said to exist, corporations may still function with considerable autonomy in their financial, marketing, or operational activities. **Majority control** is exercised by a person, group or corporation if more than 50% of the voting equity of a corporation is held, directly or indirectly, other than by way of security only, by or for the benefit of that person, group or corporation. In the case of irrevocable options or the right to acquire shares, the calculation of the voting equity is made as if all options have been exercised.

Effective control of a corporation implies control of the corporation through methods other than ownership of the majority voting equity of the corporation. The assessment of effective control may be based on any of the following rules:

- If more than 50% of the directors of a corporation are also directors of a trust or an estate, or are also members of a related group, then the corporation is effectively controlled by that trust, estate or related group.
- If more than 50% of the directors of a corporation are also directors of another corporation, and if there is a significant voting ownership of the corporation by that other corporation, then the corporation is effectively controlled by that other corporation.
- If control is acknowledged by a corporation, then the acknowledgement is sufficient to assign effective control.

Country of control

In most cases of foreign control, the country of control is the country of residence of the ultimate foreign controlling parent corporation, family, trust, estate or related group. Each subsidiary within the global enterprise is assigned the same country of control as its parent. A company whose voting rights are equally owned by Canadian-controlled and foreign-controlled corporations, is Canadian-controlled. If two foreign-controlled corporations jointly own an equal amount of the voting rights of a Canadian resident company, the country of control is assigned according to an order of precedence based on their aggregate level of foreign control in Canada. For example, United States takes precedence over all other foreign countries because it has the highest level of aggregate foreign control in Canada.

Changes affecting historical comparability of data

Listed below are summaries of the main changes in coverage, classification, concepts and methods since reference year 1999 which may affect the comparability of the *Corporations Returns Act* data over time. The year associated with each change indicates the reference year of data to which the change was first applied.

2011 Introduction of NAICS 2012

Beginning with reference year 2011, statistics by industry have been compiled based on the 2012 North American Industry Classification System (NAICS). The data is published at an aggregate level such that there is no effect on the historical comparability.

2007 Change in definition of European Union

Beginning with reference year 2007, statistics for the European Union (EU) cover 27 countries, reflecting the addition of Bulgaria and Romania. Data for these countries were previously included in estimates for the Other Foreign country of control category.

2006 Introduction of NAICS 2007

Beginning with reference year 2006, statistics by industry have been compiled based on the 2007 North American Industry Classification System (NAICS). Data for reference years 1999 to 2005 were revised in order to reflect this classification system.

2006 Refinement of Country of Control Concept

For reference year 2006, the country of control was assigned to enterprises based on the country of residence of their ultimate, controlling parent, rather than based on the country which has majority ownership of the enterprise's voting shares. When the preliminary 2006 data were released, data for reference years 1999 to 2005 were revised to reflect the new country of control method, technical improvements and late returns.

At the Total All industries level, the use of the new country of control method for the 1999 to 2005 data resulted in a small increase in the level of Canadian-controlled assets when compared with statistics for the same years based on the previous method. On average, over the 1999 to 2005 period, Canadian-controlled assets were 1.9% higher under the new method compared with the old method.

2004 Change in definition of European Union

Beginning with reference year 2004, statistics for the European Union (EU) cover 25 countries, reflecting the addition of the following ten countries to the EU: Czech Republic, Cyprus, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia and Slovenia. Prior to reference year 2004, the EU included the following countries: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Italy, Ireland, Luxembourg, Netherlands, Portugal, Spain, Sweden and the United Kingdom.

2003 Introduction of NAICS 2002

Beginning with reference year 2003, statistics by industry were compiled based on the 2002 North American Classification System (NAICS). Data for reference years 1999 to 2002 were revised in order to reflect this classification system.

1999 Introduction of NAICS 1997

Starting with reference year 1999, statistics by industry were compiled based on the 1997 North American Classification System (NAICS 1997). For reference periods 1988 to 1998 inclusive, the statistics were compiled based on the Standard Industrial Classification for companies and Enterprises (SIC-C 1980). Prior to 1988, the 1960 Standard Industrial Classification for Establishments was used.

1997 Change to *Corporations Returns Act*

The *Corporations Returns Act* was formerly known as the *Corporations and Labour Unions Returns Act* (CALURA). The original CALURA was first introduced in 1962 and Statistics Canada has prepared annual reports to Parliament since that time. Parliament officially amended the Act as of January 1999, deleting the requirement of labour unions to report under the Act.
