## **Highlights**

Employment rose by 40,000 in December, the fourth increase in five months. December's increase was all in full-time work. The unemployment rate declined 0.1 percentage points to 7.1%, the lowest in four years.

Chart 1 Employment and unemployment rates, Canada, seasonally adjusted

### Analysis — December 2012

Employment rose by 40,000 in December, the fourth increase in five months. December's increase was all in full-time work. The unemployment rate declined 0.1 percentage points to 7.1%, the lowest in four years.

Compared with 12 months earlier, employment increased 1.8% or 312,000, all in full-time work. Over the same period, the total number of hours worked rose 1.6%.

Provincially, employment increased in Ontario, Manitoba, Saskatchewan, Newfoundland and Labrador and Prince Edward Island in December. At the same time, there was a decline in Nova Scotia.

Employment rose among private sector employees in December, up 59,000, while there was little change in public sector employment and self-employment.

Year over year, employment gains among private sector employees totaled 242,000 (+2.2%), while public sector employment rose by 92,000 (+2.6%). Over the same period, the number of self-employed was little changed.

Among industries, employment increased in transportation and warehousing as well as construction, while there were fewer workers in professional, scientific and technical services; natural resources; and public administration.

In December, employment increased among core-aged men 25 to 54. Over the year, employment gains were shared among core-aged workers and those 55 and over, while employment among youths was unchanged.

#### Gains in several provinces

Employment in Ontario rose by 33,000 in December, following an increase of similar magnitude the previous month. The unemployment rate remained at 7.9%, as more people participated in the labour market. Compared with 12 months earlier, employment in the province was up 1.5%, mostly in full time, but below the national growth rate of 1.8%.

In Manitoba, employment was up by 5,200, the fourth increase in five months. The unemployment rate was 5.2% in December, little changed from the previous month, as more people entered the labour force. Compared with 12 months earlier, employment growth in the province was 1.9%.

In December, employment rose by 4,000 in Saskatchewan bringing total growth over the previous 12 months to 3.1%. The unemployment rate was little changed from the previous month at 4.6%, and remained among the lowest of all provinces.

Employment in Newfoundland and Labrador increased by 2,700 and the unemployment rate fell 1.0 percentage point to 11.5% in December. On a year-over-year basis, employment in this province has increased by 3.7%, the highest growth rate of all provinces. The employment rate, although the lowest of all provinces, has been steadily increasing, going from 49.4% in July 2009 to 55.1% in December 2012.

In Prince Edward Island, employment increased by 1,300 and the unemployment rate stood at 11.0% in December. Employment was little changed from 12 months earlier.

Employment in Nova Scotia fell by 5,000 in December, while the unemployment rate increased by 0.5 percentage points to 9.3%. With this employment decline, employment in the province was down 1.9% since December 2011.

In December, employment in New Brunswick was little changed and the unemployment rate was 10.8%. Compared with 12 months earlier, employment was down 1.9%.

In Alberta, employment was little changed for the month, while the unemployment rate increased by 0.3 percentage points as more people searched for work. Despite this increase, Alberta still has the lowest unemployment rate of all provinces, at 4.5%. Employment growth over the year was 1.5%, below the national growth rate.

Employment in Quebec was little changed in December and the unemployment rate declined 0.3 percentage points to 7.3% as fewer people searched for work. This province had an employment growth rate of 3.5% compared with 12 months earlier.

In British Columbia, employment was little changed in the month and the unemployment rate declined 0.3 percentage points to 6.5%. Compared with 12 months earlier, employment was little changed.

#### Gains in transportation and warehousing as well as construction

In December, there were more people working in transportation and warehousing, up 22,000, bringing employment in this industry to a level similar to that of December 2011.

Employment in construction rose by 18,000 in December. Despite this increase, employment in this industry was little changed from 12 months earlier.

Following an increase the previous month, employment declined by 42,000 in professional, scientific and technical services in December. This decline brought employment down 69,000 (-5.1%) on a year-over-year basis.

Employment in public administration declined by 13,000 in December, and is below its level of 12 months earlier by 23,000 (-2.3%).

Over the year, the highest employment growth rates were in educational services (+8.5%); finance, insurance, real estate and leasing (+6.4%); business, building and other support services (+5.5%); manufacturing (+3.1%); and health care and social assistance (+2.9%).

#### More men aged 25 to 54 employed in December

Employment in December rose by 41,000 among core-aged men (25 to 54), bringing their gains for the year to 97,000 (+1.6%). The unemployment rate for core-aged men in December was the lowest in four years, at 5.9%.

Employment among women aged 25 to 54 was little changed in December and up 60,000 (+1.1%) on a year-over-year basis.

Employment among youths aged 15 to 24 was unchanged in December, and similar to that of 12 months earlier. Their unemployment rate has hovered around 14% for the past two years and was 14.1% in December.

Among persons aged 55 and over, employment was little changed in December, and increased by 164,000 (+5.3%) on a year-over-year basis, driven in part by population aging.

#### Quarterly update for the territories

The Labour Force Survey also collects labour market information about the territories. This information is produced monthly in the form of three-month moving averages. The following data are not seasonally adjusted; therefore, comparisons should only be made on a year-over-year basis.

In the fourth quarter of 2012, employment levels in all three territories were similar to those in the fourth quarter of 2011. The unemployment rates were 6.1% in Yukon, 7.4% in Northwest Territories and 14.2% in Nunavut in the fourth quarter of 2012, little changed from the fourth quarter of 2011.

#### **Note to Readers**

Annual average estimates for 2012 are now available on CANSIM (tables 282-0001 to 282-0219).

The Labour Force Survey (LFS) estimates are based on a sample and are therefore subject to sampling variability. As a result, monthly estimates will show more variability than trends observed over longer time periods. Estimates for smaller geographic areas or industries also have more variability. For an explanation of sampling variability of estimates and how to use standard errors to assess this variability, consult the 'Estimates quality' section of the publication Labour Force Information (71-001-X, free).

The employment rate is the number of employed persons as a percentage of the population 15 years of age and over. The rate for a particular group (for example, youth aged 15 to 24) is the number employed in that group as a percentage of the population for that group.

The unemployment rate is the number unemployed as a percentage of the labour force (employed and unemployed).

The participation rate is the number of employed and unemployed as a percentage of the population. For more detailed information, see the Guide to the Labour Force Survey (71-543-G, free).

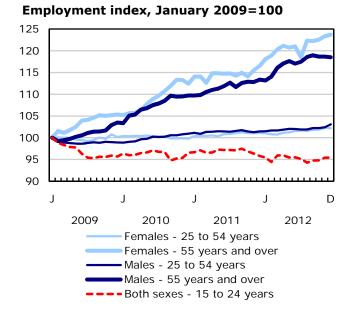

Unless otherwise stated, this release presents seasonally adjusted estimates, which facilitates comparisons by removing the effects of seasonal variations. For more information on seasonal adjustment, see *Seasonal adjustment and identifying economic trends*.

#### Revision

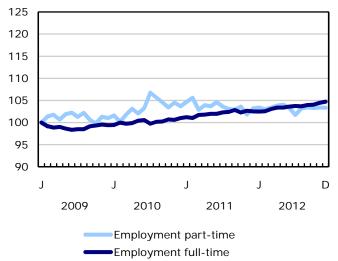

Seasonally adjusted estimates from the LFS will be revised using the latest seasonal factors, going back three years (January 2010 onwards). The revised estimates will be available on CANSIM (tables 282-0087 to 282-0094, 282-0100, 282-0116 and 282-0117) on February 1, 2013.

282-0111	Labour force survey estimates (LFS), employment by census metropolitan area based on 2006 census boundaries and North American Industry Classification System (NAICS), 3-month moving average, unadjusted for seasonality, monthly
282-0112	Labour force survey estimates (LFS), employment by census metropolitan area based on 2006 census boundaries and North American Industry Classification System (NAICS), annual
282-0113	Labour force survey estimates (LFS), employment by census metropolitan area based on 2006 census boundaries and National Occupational Classification for Statistics (NOC-S), 3-month moving average, unadjusted for seasonality, monthly
282-0114	Labour force survey estimates (LFS), employment by census metropolitan area based on 2006 census boundaries and National Occupational Classification for Statistics (NOC-S), annual
282-0115	Labour force survey estimates (LFS), by selected census agglomerations based on 2006 census boundaries, annual
282-0116	Labour force survey estimates (LFS), by census metropolitan area based on 2006 census boundaries, 3-month moving average, seasonally adjusted and unadjusted, monthly
282-0117	Labour force survey estimates (LFS), by Montréal, Toronto and Vancouver census metropolitan areas based on 2006 census boundaries, seasonally adjusted and unadjusted, monthly
282-0118	Labour force survey estimates (LFS), by urban and rural areas based on 2006 census boundaries, sex and age group, unadjusted for seasonality, monthly
282-0119	Labour force survey estimates (LFS), by urban and rural areas based on 2006 census boundaries, sex and age group, annual
282-0120	Labour force survey estimates (LFS), employment by urban and rural areas based on 2006 census boundaries, class of worker and North American Industry Classification System (NAICS), unadjusted for seasonality, monthly

282-0121	Labour force survey estimates (LFS), employment by urban and rural areas based on 2006 census boundaries, class of worker and North American Industry Classification System (NAICS), annual
282-0200	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, North American Industry Classification System (NAICS) and by sex, unadjusted for seasonality, monthly
282-0201	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, North American Industry Classification System (NAICS) and by sex, annual
282-0202	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, National Occupational Classification for Statistics (NOC-S) and by sex, unadjusted for seasonality, monthly
282-0203	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, National Occupational Classification for Statistics (NOC-S) and by sex, annual
282-0204	Labour force survey estimates (LFS), hourly wage distributions of employees by type of work, North American Industry Classification System (NAICS)and by sex, unadjusted for seasonality, monthly
282-0205	Labour force survey estimates (LFS), hourly wage distributions of employees by type of work, North American Industry Classification System (NAICS) and by sex, annual
282-0206	Labour force survey estimates (LFS), hourly wage distribution of employees by type of work, National Occupational Classification for Statistics (NOC-S) and by sex, unadjusted for seasonality, monthly
282-0207	Labour force survey estimates (LFS), hourly wage distribution of employees by type of work, National Occupational Classification for Statistics (NOC-S) and by sex, annual
282-0208	Labour force survey estimates (LFS), by educational degree, sex and age group, unadjusted for seasonality, monthly
282-0209	Labour force survey estimates (LFS), by educational degree, sex and age group, annual
282-0210	Labour force survey estimates (LFS), by family type and family age composition, unadjusted for seasonality, monthly
282-0211	Labour force survey estimates (LFS), by family type and family age composition, annual
282-0212	Labour force survey estimates (LFS), hours lost by employees by reason absent full and part week and sex, unadjusted for seasonality, monthly
282-0213	Labour force survey estimates (LFS), hours lost by employees by reason absent full and part week and sex, annual
282-0214	Labour force survey estimates (LFS), activity prior to unemployment by sex and age group, unadjusted for seasonality, monthly
282-0215	Labour force survey estimates (LFS), activity prior to unemployment by sex and age group, annual

282-0216	Labour force survey estimates (LFS), reason for leaving job during previous year by sex and age group, unadjusted for seasonality, monthly
282-0217	Labour force survey estimates (LFS), reason for leaving job during previous year by sex and age group, annual
282-0218	Labour force survey estimates (LFS), reason for not looking for work, by sex and age group, unadjusted for seasonality, monthly
282-0219	Labour force survey estimates (LFS), reason for not looking for work, by sex and age group, annual

#### **Selected surveys from Statistics Canada**

3701 Labour Force Survey	
--------------------------	--

#### **Selected summary tables from Statistics Canada**

- Labour force characteristics
- Employment by industry
- Days lost per worker due to illness or disability, by sex, by province
- Economic indicators, by province and territory (monthly and quarterly)
- Labour force and participation rates by sex and age group
- Labour force, employed and unemployed, numbers and rates, by province
- Employment by industry and sex
- Full-time and part-time employment by sex and age group
- Labour force characteristics by age and sex
- Distribution of employed people, by industry, by province
- Labour force characteristics, population 15 years and older, by census metropolitan area
- Labour force characteristics, population 15 years and older, by economic region, by province
- Days lost per worker by cause, by provinces
- Days lost per worker by industry and sex
- People employed, by educational attainment
- Reasons for part-time work by sex and age group

- Self-employment, historical summary
- Employment by age, sex, type of work, class of worker and province (monthly)
- Employment by major industry groups, seasonally adjusted, by province (monthly)
- Actual hours worked per week by industry, seasonally adjusted (monthly)
- Average hourly wages of employees by selected characteristics and profession, unadjusted data, by province (monthly)
- Labour force characteristics, seasonally adjusted, by province (monthly)
- Labour force characteristics, unadjusted, by province (monthly)
- Labour force characteristics, seasonally adjusted, by census metropolitan area (3 month moving average)
- Labour force characteristics, unadjusted, by census metropolitan area (3 month moving average)
- Labour force characteristics, unadjusted, by economic region (3 month moving average)
- Labour force characteristics by immigrant status of population aged 25 to 54, by province
- Labour force characteristics by immigrant status of population aged 25 to 54, by educational attainment
- Labour force characteristics by immigrant status, by detailed age group
- Labour force characteristics by immigrant status of population aged 25 to 54, by country of birth

<sup>1.</sup> Since 1992, the Labour force survey (LFS) has been conducted in the Yukon, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are not included in the national totals. In 1995, the LFS in the Yukon underwent a sample redesign. One result of the redesign was that the covered population increased from 85% to 92%, which is reflected by the sharp increase in the three month moving averages estimates of January, February and March of 1995 for all the level estimates. Users are therefore warned to be cautious when comparing estimates before January 1995 to estimates for January 1995 and forward.

Note(s): Related CANSIM table 282-0100.

Since 2001, the Labour force survey (LFS) has been administered in the Northwest Territories, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are not included in national totals.

<sup>3.</sup> Since 2004, the Labour force survey (LFS) has been administered in Nunavut, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are 3-month moving averages and are not included in national totals. From January 2004 to December 2007, estimates represent about 70% of all Nunavut residents aged 15 and over. Starting in January 2008, coverage was extended to 92%, so that by March 2008, the 3-month moving average is completely based on the extended coverage. Because of the large difference in coverage, users are recommended not to compare estimates prior to January 2008 with data afterwards. The January and February 2008 3-month moving average estimates are based on a mix of both coverages, since the extended coverage was introduced in January 2008. Estimates from January 2004 to December 2007 are based on the 10 largest communities in Nunavut: Iqaluit, Rankin Inlet, Cambridge Bay, Kugluktuk, Baker Lake, Arviat, Pond Inlet, Cape Dorset, Pangnirtung, Igloolik. Estimates from March 2008 to present cover the above communities as well as: Taloyoak, Gjoa Haven, Kugaaruk, Coral Harbour, Repulse Bay, Qikiqtarjuaq, Arctic Bay, Hall Beach, Clyde River.

Note(s): All geographic regions are based on the 1996 Census boundaries.

This rate is provided by Human Resources and Skills Development Canada.

# Data quality

# **About the Labour Force Survey**

The statistics contained in this report are based on information obtained through a sample survey of 56,000 representative households across the country. The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. It has been carried out monthly since then. The information generated by the survey has expanded considerably over the years with a major redesign of the survey content in 1976 and again in 1997, and provides a rich and detailed picture of the Canadian labour market.

The sample used in the Labour Force Survey has been designed to represent all persons in the population 15 years of age and over residing in the provinces of Canada, with the exception of the following: persons living on Indian reserves, full-time members of the armed forces and people living in institutions (for example, inmates of penal institutions and patients in hospitals or nursing homes who have resided in the institution for more than six months). Monthly estimates of employment, unemployment and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

## **Definitions and explanations**

The **labour force** is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed persons are those who, during the reference week:

- (a) did any work at all
- (b) had a job but were not at work

A person is considered to be **full-time** if his/her usual hours at the main job are 30 or more hours per week. When the number of hours worked at the main job is usually less than 30 hours per week then he/she is considered to be **part-time**.

**Unemployed** persons are those who, during the reference week:

- (a) were without work, had actively looked for work in the past four weeks (ending with reference week), and were available for work;
- (b) had not actively looked for work in the past four weeks but were on temporary layoff and were available for work;
- (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Persons in the civilian non-institutional population 15 years of age and over who, during the reference week, were neither employed nor unemployed are classified as **not in the labour force**.

The **unemployment rate** represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, etc.) is the labour force in that group expressed as a percentage of the population for that group.

The employment rate (formerly the employment/population ratio) represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, etc.) is the number employed in that group expressed as a percentage of the population for that group.

The part-time rate represents the number of persons employed part-time expressed as a percentage of the employed. The part-time rate for a particular group (age, sex, etc.) is the number employed part-time in that group expressed as a percentage of the employed for that group.

All geographic regions are based on the 2006 Census boundaries.

# Seasonal adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. The seasonally adjusted series contains irregular as well as longer-term cyclical fluctuations.

The seasonally adjusted series are revised each year to take into account current data and to generate new forecast factors for the next twelve months. The data are therefore subject to slight revisions in future issues of this publication.

# Sampling variability of estimates

Estimates in this publication are based on the Labour Force Survey, a monthly survey of approximately 56,000 households across Canada. Because the entire population is not surveyed, the estimates are subject to sampling error. While the published estimate is the best available indicator of the real value, changes in the level of any estimates between two months can be the result of a true change or sampling variability. The sampling error can be estimated by calculating the standard error for the published estimate or statistic. These standard errors have been included in the publication tables, in order to assist users in interpreting the data.

#### Interpretation based on standard error

Two thirds of the time (68%), a change greater than the sampling error indicates a real change. The larger the change compared to the standard error, the better the chance that we are observing a real change, as opposed to a change due to sampling variability. At the 95% level, in order to ensure that change is real, the change in the estimate must be greater than twice the sampling error.

Movements in estimates that are smaller than the sampling error are less likely to reflect a real change and more likely to be due to sampling variability. While the above is true for monthly movements, one can have more confidence in a series of consecutive movements in the same direction, even though some of the monthly movements may be smaller than the sampling error.

#### Interpretation based on confidence intervals

Confidence intervals provide another way of looking at the variability inherent in estimates of sample surveys. To illustrate how to calculate the confidence interval, let us say that one month the published estimate for total employment rose by 16,000 to reach 16,500,000. The associated standard error for the movement estimate is 27,200. The standard error used to interpret the movement estimate indicates that:

- There are approximately two chances in three (68%) that the real value of the movement between the two months falls within the range -11,200 to +43,200 (16,000 + or one standard error).
- There are approximately nine chances in ten (90%) that the real value of the movement between the two months falls within the range -27,520 to +59,520 (16,000 + or 1.6 times the standard error).
- There are approximately nineteen chances in twenty (95%) that the real value of the movement between the two months falls within the range -38,400 to +70,400 (16,000 + or two standard errors).

For more detailed explanations on sampling variability of estimates, and in particular for information on how to assess the variability of level estimates, consult the Data quality section of the *Guide to the Labour Force Survey*, (71-543-G) on page 27.

### **Documentation**
