## **Canadian Data Report of Fisheries and Aquatic Sciences**

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

Data Reports are not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the issuing establishment. The correct citation appears above the abstract of each report.

## **Rapport statistique canadien des sciences halieutiques et aquatiques**

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Ministère des Pêches et des Océans, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

Les Rapports statistiques ne sont pas préparés pour une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au haut du résumé de chaque rapport.

ABSTRACT

Hourston, A. S. 1981. British Columbia herring landings for the 1980-81 season. Can. Data Rep. Fish. Aquat. Sci. No. 311: iii + 154 p.

Individual landings of herring caught in British Columbia waters during the 1980-81 season are listed with the associated data. The sources of these data are described, along with procedures for compiling, checking and revising the data. The role of these data in annual stock assessment analysis is outlined.

Key words: Clupea harengus pallasi, landings, catch.

RÉSUMÉ

Hourston, A. S. 1981. British Columbia herring landings for the 1980-81 season. Can. Data Rep. Fish. Aquat. Sci. No. 311: iii + 154 p.

Les débarquements de hareng capturé dans les eaux de la Colombie-Britannique au cours de la saison de 1980-81 sont indiqués séparemement avec les données connexes. Les sources de ces données sont décrites, ainsi que les procédures de compilation, de vérification et de révision des données. Le rôle de ces données pour l'analyse d'évaluation des stocks annuels est aussi exposé.

Mots clés: Clupea harengus pallasi, débarquements, prises.

## INTRODUCTION

Detailed catch records form one of the three sources of monitoring data used for annual assessments and forecasts of British Columbia herring stocks (Hourston and Schweigert 1981). The information required includes the tonnage taken, place and date of capture, gear used, and the disposal of the catch (product produced) for each successful set during the season. These data, along with monitoring data from biological sampling (Hourston and Haist 1981a) are processed by computer analyses to estimate the age composition and average weight, average length, percent females, and numbers and tons of fish in each year-class represented which were taken from each section (Figs. 1, 2) during each week of the season (Hourston and Haist 1981c). The results are then summarized by season and combined with similar estimates of spawning escapements from egg depositions (Hourston and Haist 1981b) to add data for this year to a continuing inventory of the stocks (Hourston and Haist 1981d). This inventory, along with estimates of spawning requirements, forms the basis of further analyses to forecast the available catch for the coming season (e.g. Hourston 1980).

Detailed catch data have been archived in this way since the 1950-51 season (Hourston and Isaacson 1972), providing a 31-yr series of basic data accessible for analyses and modeling.

## METHODS

### DATA SOURCES

Each herring catch from British Columbia waters is reported when landed on a "sales slip", a copy of which is provided to the Department's Economics and Statistical Services in Vancouver. Since these same sales slips are the basis for payment to the fisherman and of plant inventories of landings, coverage is considered virtually complete. This is especially true for the major roe and food fisheries, whose products are virtually all exported, because recorded landings must account for the product on the export licence. A further check is provided by comparing sales slip records with hailed catches (estimates of daily catches on the fishing grounds by Fishery Officers).

### DATA COMPIRATION (ECONOMICS AND STATISTICAL SERVICES)

Information on herring sales slips is coded for locality (Hourston and Hamer 1979), gear, and disposal (Table 1) and any other information required by other users. These data, along with numerical data for the

weight and date of the catch and the C.F.V. (Canadian Fishing Vessel) number, are recorded on a master computer tape, along with catch data for all other species for that calendar year. Herring catch data are copied onto other tapes semi-annually and forwarded to the Pacific Biological Station for stock assessment analyses.

#### DATA CHECKS AND REVISIONS (PACIFIC BIOLOGICAL STATION)

The "months" coded on the master catch file are not exact calendar months; weeks overlapping two calendar months are assigned to one or the other of the two months involved. An additional coding of period (week number for that master file month) provides a means of revising the codings to the calendar months. For example, a date recorded as day 29, period 1 in month 4 would be revised to day 29, month 3.

Information on the location of capture is sometimes not sufficiently specific (e.g. Area 23 or Barkley Sound) for direct assignment to the sections used in the stock assessment analyses (Figs. 1, 2). Such landings are traced to their section of capture through information from other sources. These include sections open for fishing on the date of capture, the location of catches taken by that vessel immediately before or after that date, Fishery Officers' journal records of the distribution of boats in their area, differences between catches recorded on sales slips and hailed catches for that day and contacting the skipper of the catcher boat.

The data are then screened for obvious errors in the recording and/or coding of section or date (fishery closed), disposal of the catch (unrealistic or illegal) and gear (excessively high gillnet catches or low seine catches or change in gear for the same CFV number). Questionable data are checked as for incomplete data above and/or through the company and plant where the fish were landed.

#### RESULTS

Final values for herring landings for the 1980-81 season are given by section, locality and date in Table 2, along with the related data. CFV numbers are not included as catch records for individual boats are confidential.

#### ACKNOWLEDGMENTS

Computer tapes were prepared by the Economics and Statistical Service in Vancouver. The figures were prepared by Mr. D. C. Miller.
